## Sysmac Studio 3D Simulation

Sysmac Studio 3D Simulation simplifies operational simulations of manufacturing facilities by simply adding optional licenses for simulation functions to the Sysmac Studio programming software. Operational simulation of robots and peripheral equipment can be performed with high accuracy and real-time. In addition, this product enables visualization and preliminary verification of machine behavior before it is actually started up, thus the time required to confirm the production capacity of the equipment, start-up, and modification is shortened.

### Main Features:

- Use only the Sysmac Studio with loaded 3D CAD data\*1 for 3D simulations. Operation of a control program created during machine development can be verified in a virtual environment. This improves program accuracy during design, reducing rework at verification using physical devices and saving development time.
- Simulations can be used to test feasibility during process design or to share the same understanding between mechanical and electrical designers during operation design, improving design quality and engineering efficiency.

## Application Manager

Sysmac Studio provides another layer of simplification for Application development, by means of the Application Manager modules. These modules enable advanced programming capabilities for Packaging (PackManager) and Vision (Robot Vision Manager) applications.

**PackManager** can manage scalable packaging lines from integration to deployment and step-by-step guidance without scripting. The software walks you through the configuration of packaging application by setting up process-specific items, such as controllers, robots, and conveyor belts.

### Main Features:

- Process Manager optimizes the resources, decreasing idle time and maximizing the amount of parts processed per robot.
- Fully customizable for any line configuration and advanced load balancing.

**Robot Vision Manager** provides algorithms and tools for easily integrated vision systems into robotic applications. Camera calibration, part identification, and image processing tools are supported as part of this Manager.

Application Manager modules are configured through Sysmac Studio and executed on Omron's IPC Application Controller.

# Automation Control Environment (ACE)

**ACE is a PC-based software package that easily manages Omron's entire portfolio of robots, controls, vision, and feeding systems**

ACE software provides an easy-to-use environment to program and deploy applications ranging from simple pick & place to multi-robot belt-tracking lines. It allows you to increase productivity while streamlining configuration setup. ACE 4.0 shifts to an even more intuitive interface and provides superior data visualization.

- Fast emulation and 3D visualization for quick proof of concept
- Wizard-based user-friendly interface to calibrate and teach the robots
- Recipe Manager simplifies management of manufacturing process and handles a range of product variations, ideal for flexible automation to reduce changeover time
- Robot Vision Manager enables vision guided conveyor-tracking and AnyFeeder integration via wizards
- Robot Vision Manager 4.0 also includes vision inspection tools to improve quality assurance and traceability

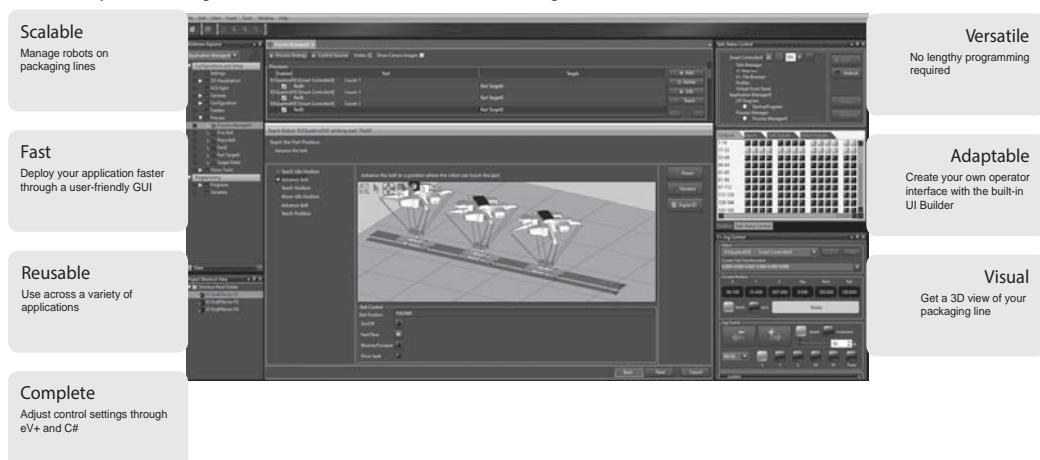

## Application Manager

ACE provides another layer of simplification for Application development, by means of the Application Manager modules. These modules enable advanced programming capabilities for Packaging (PackManager) and Vision (Robot Vision Manager) applications.

**PackManager** can manage scalable packaging lines from integration to deployment and step-by-step guidance without scripting. The software walks you through the configuration of packaging applications by setting up process-specific items, such as controllers, robots, and conveyor belts.

### Main Features:

- Process Manager optimizes the resources, decreasing idle time and maximizing the amount of parts processed per robot.
- Fully customizable for any line configuration and advanced load balancing.

**Note:** When ACE PackManager is used to configure an application, robot cycle time may vary between the SmartController EX and eAIB/eMotionBox.

**Robot Vision Manager** provides algorithms and tools for easily integrated vision systems into robotic applications. Camera calibration, part identification, and image processing tools are supported as part of this manager.

Application Manager modules run as part of ACE and are executed on Omron's IPC Application Controller.

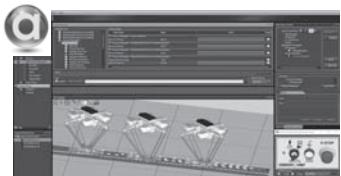

## ACE License Configuration

License	Part Number	Explanation
ACE PackManager (for ACE 4.x)	20409-000	Enables full functionality of the ACE PackManager software.
Robot Vision Manager (for ACE 4.x)	20410-000	Enables the Robot Vision Manager functionality and inspection tools library.
Dual (PackManager plus Vision)	20433-000	Enables functionality of both PackManager and Robot Vision Manager

**Note:** When you create robot programs without using PackManager wizards and vision system, the ACE license is not required.

# ePLC Robot Control Library

## No need to learn a new robot programming language Control robots directly from the NJ/NX/NY Controller

- The same instructions and programming method can be used to control any type of robot: parallel, SCARA, or articulated robot
- Robots can be controlled by using Function Blocks in Ladder or ST language
- Data on robots, controller, and other devices can be integrated and visualized
- Robots are connected to the NJ/NX/NY Controller via EtherNet/IP. \*

\* The communication cycle time between the robot and NJ/NX/NY Controller depends on the robot controller. When the SmartController EX is used, the communications cycle time is 15 times faster than when the eAIB or eMotionBloX is used.

- \*1. When an external power supply and Power over Ethernet (PoE) are both supplied to the camera at the same time, the camera defaults to the external power supply.
- \*2. Dimensions exclude the connectors at the rear of the camera.
- \*3. Ensure the camera is installed with the appropriate heat dissipation. A mounted lens and a tripod with an aluminum plate can decrease the camera housing temperature for heat dissipation. When the internal temperature sensor on the camera shows less than 65°C, the camera housing temperature (top plate) will be less than 57°C.
