APPLICATION CONSIDERATIONS

READ AND UNDERSTAND THIS DOCUMENT

Please read and understand this document before using the products. Please consult your OMRON representative if you have any questions or comments.

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

SUITABILITY FOR USE

THE PRODUCTS CONTAINED IN THIS DOCUMENT ARE NOT SAFETY RATED. THEY ARE NOT DESIGNED OR RATED FOR ENSURING SAFETY OF PERSONS, AND SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR SUCH PURPOSES. Please refer to separate catalogs for OMRON's safety rated products.

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

• Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
• Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
• Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.
NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PERFORMANCE DATA

Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

COPYRIGHT AND COPY PERMISSION

This document shall not be copied for sales or promotions without permission.

This document is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this document in any manner, for any other purpose. If copying or transmitting this document to another, please copy or transmit it in its entirety.

PRECAUTIONS ON SAFETY

• Meanings of Signal Words

The following signal words are used in this manual.

⚠ **WARNING**	Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.

• Meanings of Alert Symbols

The following alert symbols are used in this document.

|	Indicates the possibility of explosion under specific conditions.

⚠ WARNING

Failure to read and understand the information provided in this manual may result in personal injury or death, damage to the product, or product failure. Please read each section in its entirety and be sure you understand the information provided in the section and related sections before attempting any of the procedures or operations given.

• Alert statements in this Manual

The following alert statements apply to the products in this manual. Each alert statement also appears at the locations needed in this manual to attract your attention.

⚠ WARNING	
This product is not designed or rated for ensuring safety of persons. Do not use it for such purposes.	🚫
A lithium battery is built into the V530-R160E/EP and may occasionally combust, explode, or burn if not treated properly. Dispose of the Controller as industrial waste, and never disassemble, apply pressure that would deform, heat to 100 C or higher, or incinerate the V530-R160E/EP.	💥
A lithium battery is built into the V530-R160E/EP and may occasionally combust, explode, or burn if not treated properly. When replacing the battery, never short-circuit, attempt to charge, disassemble, apply pressure that would deform, or incinerate the battery.	💥

Precautions for Safe Use

Observe the following precautions to ensure safe use of the product.

■ Installation Environment Precautions

- Do not use the V530-R160E/EP in environments with flammable or explosive gases.
- Do not block the V530-R160E/EP's cooling vents.
Cooling vent

Before the V530-R160E/EP is shipped, a protective label is attached to the top of the V530-R160E/EP to cover the cooling vent. This label prevents wire strands from falling into the V530-R160E/EP during wiring. Do not remove it until wiring is completed. The label must be removed after wiring to allow proper cooling during operation.

Cooling vent

- Install the V530-R160E/EP away from high-voltage devices and moving machinery to allow safe access during operation and maintenance.
- Be sure to securely tighten the screws when mounting the V530-R160E/EP.

■ Power Supply and Wiring Precautions

- Use the V530-R160E/EP with the power supply voltages specified in this manual.
- Use the wire and crimp terminals of the proper sizes as specified in this manual. Do not connect the power supply wires by just twisting stranded wires and connecting them directly to the terminals.
- Keep the power supply cable as short as possible (10 m maximum).
- Use a DC power supply with countermeasures against high-voltage spikes (safe extra low-voltage circuits on the secondary side).

- Use an appropriate ground (100 Ω maximum).
- Use a grounding point as close as possible to the V530-R160E/EP and keep the ground line as short as possible.
- Wire the V530-R160E/EP to the ground with a separate ground wire. To avoid grounding problems, do not share the ground wiring with any other devices or ground the V530-R160E/EP to the building's steel framing or plumbing.

■ **Connectors**

Do not remove the connector cover. Doing so may cause product failure.

Connector
cover
■ **Regulations and Standards**

- EN61326-1
- Electromagnetic environment : Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)
- The following condition is applied to the immunity test of this product.
  - a) If the level of disturbance of the video is such that characters on the monitor are readable, the test is a pass.
  - b) Power line: 10 m max.
  - c) Signal line: 30 m max.
- Notice for Korea Radio Law

  Ａ급 기기 （업무용 방송통신기자재）
  이 기기는 업무용 (Ａ급) 전자파적합기기로서 판매자
  또는 사용자는 이 점을 주의하시기 바라며 , 가정외의
  지역에서 사용하는 것을 목적으로 합니다.

■ **Other Precautions**

- Do not attempt to disassemble, repair, or modify the V530-R160E/EP. Doing so may cause product failure or a fire.
- If you suspect an error or malfunction, stop using the V530-R160E/EP immediately, turn OFF the power supply, and consult your OMRON representative.

Precautions for Correct Use

Observe the following precautions to prevent failure of the product to operate, product malfunctions, and adverse influences on performance and devices.
Controller Installation Site

■ Do NOT install the V530-R160 in locations subject to the following conditions:

- Ambient temperatures outside of 0 to +50°C (32 to 122°F) range
- Rapid temperature fluctuations (likely to cause condensation)
- Relative humidities outside of the 35 to 85% range
- Presence of corrosive or flammable gases
- Presence of dust, salt, or iron particles
- Direct vibration or shock
- Direct sunlight
- Water, oil, or chemical fumes or spray
■ Mounting Orientation

To improve heat dissipation, install the controller in the following orientation only:
Correct

Do not install the controller in the orientations shown in the following diagram.

Incorrect   Incorrect

■ Ambient Temperature

• Maintain a minimum clearance of 50 mm above and below the V530-R160 to improve air circulation.

• Do not install the V530-R160 immediately above significant heat sources, such as heaters, transformers, or large-capacity resistors.

• Do not let the ambient operating temperature exceed 50°C (122°F).

• Provide a forced-air fan or air conditioning if the ambient temperature is near 50°C (122°F) so that the ambient temperature never exceeds 50°C (122°F).

Control Box

V530-R160

Louver
■ Noise Resistance

• Do not install the V530-R160 in a cabinet containing high-voltage equipment.

• Do not install the V530-R160 within 200 mm of power cables.

Power Cable

200 mm min.

200 mm min.
V530-R160

Component Installation and Handling

■ OMRON Components

Be sure to use the Camera, Camera Cable, and Console designed for the V530-R160.

Refer to page 36.

■ Cameras and Cables

Always turn OFF the power before connecting or disconnecting cameras or cables.

■ Cameras

The camera's case is connected to the 0 V line in the internal circuits. Heed the following precautions to prevent noise interference.

• Do not ground the Camera.

• Do not remove the base attached to the Camera.

• Do not remove the core attached to the V530-VS-2D Camera Cable.

■ Touching Signal Lines

To prevent damage from static electricity, use a wrist strap or another device for preventing elec-
trostatic discharges when touching terminals or signal lines in connectors.

■ Removing the Memory Card

Before removing a Memory Card, stop the power supply to the Card or turn OFF the V530-R160.
The Memory Card or the V530-R160 itself may be damaged if a Memory Card is removed while
power is being supplied.
(Stop the power supply to the Memory Card from the menu. Refer to page 172.)

■ Turning OFF the Power

Do not turn OFF the power while a message is being displayed indicating that processing is
being performed. Data in memory will be destroyed, and the V530-R160 may not operate cor-
rectly the next time it is started.

```

                          Freeze( 0)

Saving data. ▉▉▉▉
```
■ Using the RESET Signal

Do not use the RESET input immediately after power is turned ON. When using RESET input to
synchronize execution timing, wait at least 1 second after turning ON the V530-R160 power sup-
ply before turning ON the RESET signal.

Confirming Package Contents

Check the contents of the package as soon as you receive the V530-R160.
Contact the nearest OMRON representative if any of the following items are missing.

• V530-R160 2-Dimensional Code Reader Controller
• Mounting Bracket (for rear surface mounting)
Bracket: Qty: 1
Screws (M3×6): Qty: 4

• Connector for I/O Terminals: Qty: 1
(Phoenix Contact model MC1.5/10-STF-3.5)
• Ferrite Core for F150-VM-2D Monitor Cable: Qty: 1
• User's Manual (this manual)
Editor's Note

Visual Aids

The following headings appear in the left column of the manual to help you locate different types of information.

NOTICE
Indicates information required to take full advantage of the functions and performance of the product. Incorrect application methods may result in the loss of damage or damage to the product. Read and follow all precautionary information.

CHECK!
Indicates points that are important in using product functions or in application procedures.

Indicates where to find related information.

Indicates information helpful in operation.

SECTION 1
Outline

This section introduces the functions and operational flow of the controller.

What is a 2-dimensional Code Reader?

It is a device for reading 2-dimensional codes directly marked on products and parts.

2-dimensional code means code that has two dimensions (faces). It permits more data to be written than bar code, which contains information in one direction only.

■ Integration of Objects and Data

In the case of critical parts that affect safety, there were calls for the management of history data for each part.

Once 2-dimensional code has been printed on a part so that the object and the corresponding information are "integrated", part histories can be accurately managed. At the assembly stage too, if the 2-dimensional codes of the parts are read and compiled in a database, the information for individual products can be managed accurately, and in the event that any problem arises, the cause can be traced quickly.

Example: Reading engine part information.

V530-R160

V530-R160
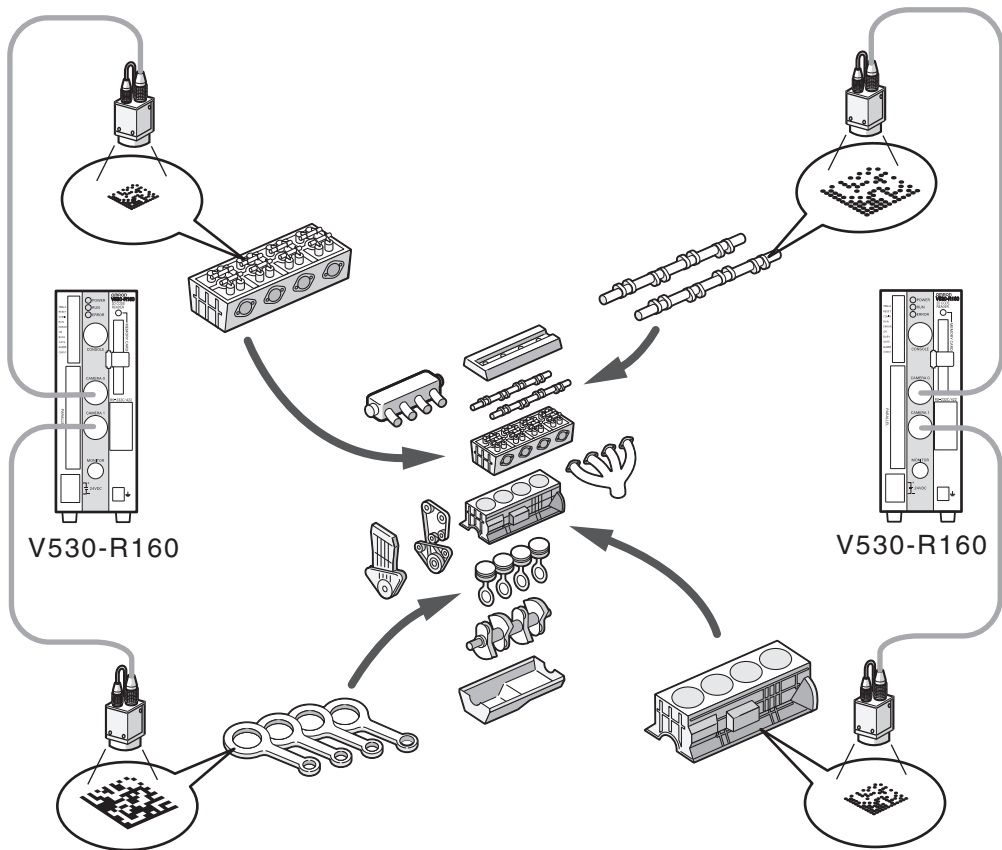

■ The Marking can be Done in a Small Space
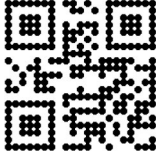

Conventional bar codes were too large to be printed on some smaller parts.
2-dimensional codes allow high-density information to be packed into a small space.

Example: Reading printed circuit board information.
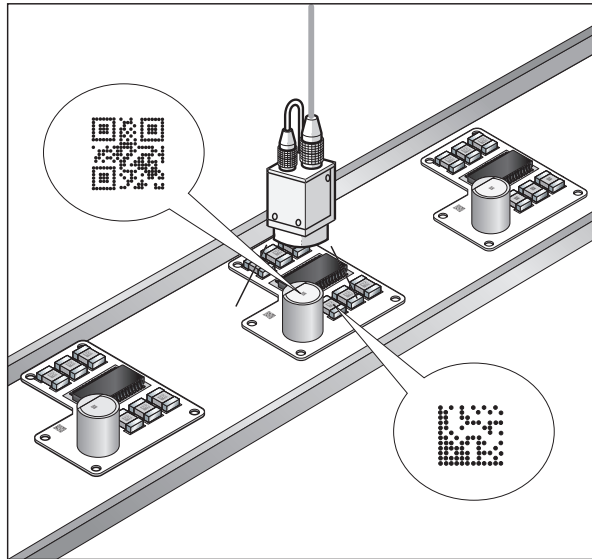

Introduction to Functions

▪ Reading is possible for both DataMatrix and QRCode.

Reading code	DataMatrix	QRCode (Model 1, 2)
Corresponding size (Matrix size)	•ECC200 10 × 10 to 64 × 64 8 × 18 to 16 × 48 •ECC000, 050, 080, 100, 140 9 × 9 to 25 × 25	21 × 21 to 41 × 41 (Version 1 to 6)
Readable direction	360°	
Resolution	Vary according to magnification and features of the lens to be used.	
Reading region		
Reading depth		

DataMatrix 📖 Refer to page 283 (Sec.10).

QRCode 📖 Refer to page 283 (Sec.10).

About DataMatrix and QRCode

CHECK!

• Normally, it is necessary to have a margin around the 2-dimensional code. Ensure a margin of at least a cell around both DataMatrix and QRCodes.

• Adjust so that there is only one reading code within the field of vision. Reading cannot be performed correctly if there are more than one code on a screen.

• Adjust the field of vision of a camera for the 2-dimensional code to be at least 5 pixels per cell.

Margin: 1 cell min.
Field of vision of a camera : At least 5 pixels per cell

Margin 📖 Refer to page 285 (Sec.10).

▪ 2 cameras can be used for reading.

If two cameras are connected, two types of reading process can be handled with one controller. The scene can be set for each process, and the reading triggers can be input at TRIG C and TRIG D of the parallel I/O.

Refer to page 194 (Sec.8).

Controller
▪ A memory card slot is provided.

Memory cards can store settings, image and reading data. Since the settings can be stored in the memory card when changing settings, there is no longer any need to bring in a PC for this purpose.

Refer to pages 51 (Sec.2), 158 (Sec.6), and 163 (Sec.6).
■ Dot code images can be converted to easy-to-read images.

Dilate or **Erosion** processing converts code images that have a small dot size and are difficult to read into images that can be read reliably.

Refer to page 94 (Sec.5).

・Result of **Dilate**
Before processing   After processing

・Result of **Erosion**
Before processing   After processing

■ A maximum of ten patterns can be registered for one scene.

If multiple patterns are registered, even codes subject to dispersion in the dot spacing or printing quality can be read. It is also possible to read codes with different matrix sizes and symbol colors in the same scene.

Refer to pages 105 (Sec.5) and 130 (Sec.5).

Even codes subject to dispersion can be read.

Up to 10 patterns can be registered.

Pattern 0   Pattern 1   Pattern 2   Pattern 3   Pattern 4

Pattern 5   Pattern 6   Pattern 7   Pattern 8   Pattern 9
▪ The reading results over time can be expressed in the form of a graph.

By using the trend monitor display function, trends in the marking status and illumination status of the code can be observed. This can help prevent the occurrence of frequent reading failures, and help in the analysis of the cause of reading failures. Reading history data can be saved in the memory card.

📖 Refer to page 119 (Sec.5).
▪ Image data can be backed up automatically.

Images that you wish to save can be backed up automatically in the memory card.

By backing up the images when reading failures occur, and confirming the time of occurrence and history of failures, trouble can be resolved promptly.

📖 Refer to page 182 (Sec.7).

Note: Other monitors equipped with an NTSC external video input terminal can also
be used.

Component Names and Functions

1. POWER indicator
2. RUN indicator
3. ERROR indicator
4. I/O terminals (Control lines)
5. I/O connector (Control and data lines)
6. Camera connectors
7. Power supply terminals
8. Monitor connector
9. Ground terminal
10. RS-232C/422 connector
11. Card lock
12. Battery cover
13. Memory Card slot
14. Memory Card indicator
15. Console connector
1. Lit while power is ON.
2. Lit in RUN mode.
3. Lit when an error occurs.
4. and 5. Connects the V530-R160 to host devices such as a sync sensor or PLC.
6. Connects to the Camera.
7. Wired to the power supply.
8. Connects to the monitor.
9. Connects to the ground wire.
10. Connects the V530-R160 to a host device such as a personal computer or PLC.
11. This lock secures the Memory Card so that it does not disconnect unintentionally due to vibration.
12. Covers the compartment that contains the V530-R160's battery.
13. This slot receives the Memory Card.
14. Lit when power is being supplied to the Memory Card. (The Memory Card must not be inserted or removed when this indicator is lit.)
15. Connects the V530-R160 to a Console.

Mounting the Controller

There are four ways to mount the Controller: "DIN Track mounting", "rear surface-mounting", "side surface-mounting", or "bottom surface-mounting".

DIN Track Mounting

The 2-Dimensional Code Reader can be easily mounted to or removed from 35-mm DIN Track.

DIN Track (OMRON)
PFP-100N (1 m)
PFP-50N (50 cm)
PFP-100N2 (1 m)

PFP-M End Plate
(OMRON)
■ Mounting the Controller

Hook the V530-R160 into the DIN Track as shown in the diagram and then press in at the bottom until the V530-R160 locks into place.
■ Removing the Controller

Use a screwdriver to pull the hook down and then pull out the V530-R160 from the bottom.
Rear Surface-mounting

1. Attach the Mounting bracket to the V530-R160 Controller using the four machine screws (M3 × 6) included with the bracket.

▼
2. Fasten the V530-R160 Controller and Mounting Bracket to the mounting surface with four M4 screws.

Dimensions

Connecting Peripheral Devices

This section shows how to connect peripheral devices to the V530-R160.

NOTICE

• Turn OFF the power to the V530-R160 before connecting or disconnecting cables. Peripheral devices can be damaged if connected or disconnected with the power supply turned ON.

• The connector is capped when the V530-R160 is shipped. When not using the connector, leave the cap in place to protect against dust, dirt, and static electricity.

Connecting a Console

Connect the Console to the V530-R160's CONSOLE connector. An F150-KP-2D Console can be connected.

CONSOLE
Connecting a Monitor

Connect the Monitor cable to the V530-R160's MONITOR connector, and attach the enclosed Ferrite Core to the Monitor cable. The Ferrite Core should be attached to the cable approximately 10 mm from the MONITOR connector.

MONITOR

Approx. 10 mm

Ferrite Core

Wrap the cable in one loop in the Ferrite Core.
Connecting a Camera

Connect the Camera cable to the V530-R160's CAMERA connector.

CAMERA

SECTION 2   Connecting Peripheral Devices
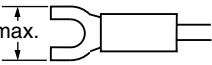

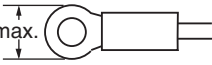

Power Supply and Ground

Wire the power supply and the ground to the top terminal block, and tighten the screws to a torque of 0.49 N·m. After wiring, check to make sure that the wiring is correct.

Crimp Terminals and Cables

The terminal block uses M3 terminal screws.
Use appropriate crimp terminals for M3 screws, as shown below.

Recommended Model

	Manufacturer	Model	Recommended wire size
Forked 6.2 mm max.	J.S.T. Mfg Co., Ltd.	V1.25-N3A	
Round 6.2 mm max.	J.S.T. Mfg Co., Ltd.	V1.25-MS3	1.31 to 1.65 mm^2

Ground Wiring

Be sure to wire the protective conductor of the equipment independently. To avoid damage to the equipment, do not share the protective conductor wiring with any other devices nor wire the protective conductor terminal to the girder.
Keep the ground line as short as possible.

Ground to 100 Ω or less
Wiring the Power Supply

Wire the Power Supply Unit independently of other devices. In particular, keep the power supply wired separately from inductive loads.
Use a power supply with the following specifications.

Condition

Output current	Power supply voltage
1.6 A min.	20.4 to 26.4 VDC

Recommended model

Manufacturer	Model
OMRON	S8VS-06024

CHECK!
Use a DC power supply with safe extra low-voltage circuits on the secondary side.
If UL recognition is required, use a UL class II power supply.

+
-
24 VDC
Keep the power supply cable as short as possible (10 m max.).

CHECK!
Cover the power supply with the Terminal Block Protection Cover. Uncovered terminal blocks can cause electric shock.

Terminal Block Protection Cover
(Transparent)

SECTION 2 **Power Supply and Ground**
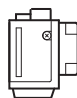

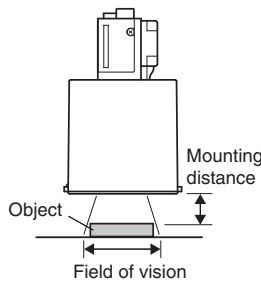

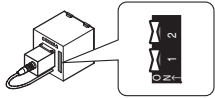

Cameras, Lenses, Lighting, and Memory Cards

This section provides additional information on cameras, CCTV lenses, lighting, and Memory Cards.

Overview of Available Cameras

The F150-SLC20 Camera with Intelligent Lighting is a camera dedicated to the V530-R160 and has a special lens and light already fitted. The light and lens are contained in a single unit, so installation is very simple. Just mount the Camera at the proper distance from the measurement object and it is ready to use.

Model		Field of vision and distance to object			Lighting precautions
		Field of vision*	Mounting distance	Relationship between Camera and object	
Camera only	F150-S1A-2D	Determine the required field of vision based on the size of the measurement object and select an appropriate CCTV lens (C mount).			Use lighting that is appropriate for the object being measured.
Camera with an Intelligent Lighting	F150-SLC20	20 mm × 20 mm	15 to 25 mm	Mounting distance / Object / Field of vision	Use with DIP switch pins 1 and 2 both set to OFF.

* A camera with a field of vision of 20 mm is optimal for an angle of around 10 mm.
Use the following guidelines for the code's matrix size.

QRCode	21×21 (Version 1) to 33×33 (Version 4)
DataMatrix	10×10 to 26×26

CHECK! Camera with an Intelligent Lighting
The lens focus is fixed and the distance must be adjusted each time the lens or Camera is changed because the field of vision and focus vary from lens to lens.
• Also, the camera's working distance is an approximate value. Mount the camera so that it can be adjusted slightly nearer to or farther from the object.

If the object size and field of vision are incompatible, use a standard CCTV lens and light.
How to mount the camera: Refer to page 269 (Sec.10).

CCTV Lenses

When using a Camera without a light (F150-S1A-2D), refer to the following graph to select the appropriate Lens and Extension Tube. The lens required will differ depending on the size of the object and the distance to the lens (WD).

■ Optical Chart
■ Interpreting the Graph

The horizontal axis of the graph shows the field of vision L (mm), and the vertical axis shows the working distance WD (mm). The curves on the graph show the relationship between the field of vision and camera distance for each CCTV lens. The values are significantly different for each lens, so double-check the model of the lens before using the graph. The values indicate the lengths of the Extension Tubes. The value "0" shows the case where an Extension Tube is not needed and the value "5" shows the case where a 5-mm Extension Tube is used.

Example:
When a 3Z4S-LE C1614A CCTV lens is being used and a field of vision of 10 mm is needed at the measurement object, a working distance of 30 mm and 5-mm Extension Tube are required.

■ Lenses and Lens Diameters

Max. outer dia.

1"-32UN -2A   30 dia.
Total length

Lenses and Lens Diameters

Lens	Focus length	Brightness	Maximum outer diameter	Total length	Filter size
3Z4S-LE C418DX	4.8 mm	F1.8	40.5 mm dia.	35.5 mm	–
3Z4S-LE B618CX-2	6.5 mm	F1.8	48 mm dia.	42 mm	
3Z4S-LE C815B	8.5 mm	F1.5	42 mm dia.	40 mm	M40.5 × P0.5
3Z4S-LE B1214D-2	12.5 mm	F1.4	42 mm dia.	50 mm	
3Z4S-LE C1614A	16.0 mm	F1.4	30 mm dia.	33 mm	M27 × P0.5
3Z4S-LE B2514D	25.0 mm	F1.4	30 mm dia.	37.3 mm	
3Z4S-LE B5014A	50.0 mm	F1.4	48 mm dia.	48 mm	M46 × P0.75
3Z4S-LE B7514C	75.0 mm	F1.4	62 mm dia.	79 mm	M58 × P0.75

■ Extension Tube

One or more Extension Tubes can be inserted between the lens and the Camera to focus the Camera image. Use a combination of one or more of the six sizes of tube to achieve the required length.
Extension Tube

Extension Tube

Model	Maximum outer diameter	Length
3Z4S-LE EX-C6	31 dia.	Length: 40 mm 20 mm 10 mm 5 mm 1.0 mm 0.5 mm Set of 6 tubes

NOTICE
• Do not use the 0.5-mm and 1.0-mm Extension Tubes attached to each other.
Since these Extension Tubes are placed over the threaded section of the Lens or other Extension Tubes, the connection may loosen when multiple 0.5-mm / 1.0-mm Extension Tubes are used together.
• Reinforcement may be required for combinations of Extension Tubes exceeding 30 mm if the Camera is subject to vibration.

Lighting

A stable image must be obtained to ensure accurate inspection. Use appropriate lighting for the application and the measurement object if using a Camera without a light (F150-S1A-2D).

■ Selecting a Light

View the object from the front.

Seen from the front, does the code contrast clearly with its background?

→ YES → Ring Lights

↓ NO

Incline the object.

Is there a clear contrast between the code and its background when seen at an angle?

→ YES → Oblique Lighting

↓ NO

Check if your face is reflected in the object.

Does the object have a mirror surface?

→ YES → Coaxial Lighting

↓ NO

Is the object transparent?

→ YES → Back Lighting

↓ NO

Try combining various lights.

SECTION 2 Cameras, Lenses, Lighting, and Memory Cards

■ Lighting

Back Lighting

A stable, high-contrast image can be obtained using back lighting.

Camera

Object

Light source
Applications: Reading codes on transparent objects such as sheet glass

Reflected Lighting

Ring Lights

Objects can be illuminated uniformly.

Camera

Light source

Object
Applications: Printed markings on paper labels and cardboard, stamped markings on engine parts, etc.

Oblique Lighting

By shining the light from an angle, detection is achieved by distinguishing regular and diffuse reflected light.

Camera

Light source
Object

Applications: Direct marking on engine parts, PCBs, electronic components, etc.

Coaxial Lighting

A stable image can be obtained with few shadows from uneven surfaces on the measurement object.

Camera

Half mirror   Light source
Object

Applications: Reading codes from objects with highly reflective surfaces such as semiconductor wafers

Memory Card

Use a Memory Card to backup data such as settings and image data. Data from the V530-R160 can be backed up in a personal computer just by inserting the Memory Card into the computer and copying the desired data.

Recommended Model

Manufacturer	Model	Capacity
OMRON	F160-N64S(S)	64 MB
OMRON	QM300-N128S	128 MB

CHECK! A filler card with no memory is inserted into the V530-R160's Memory Card slot when the V530-R160 is shipped. Remove this filler card and install a Memory Card to use this function.
If no Memory Card is being used, leave the filler card in place to prevent dust or dirt from entering the Memory Card slot.

■ Installing a Memory Card

1. Open the Memory Card slot's card lock.

CHECK! Do not force the lock open; lift the latch gently.
2. Insert the Memory Card.
3. Close the card lock to secure the Memory Card.
■ Removing the Memory Card

1. Stop the power supply to the Memory Card or turn OFF the V530-R160
Refer to page 172 (Sec.6).

▼

2. Confirm that the Memory Card indicator is not lit.

NOTICE Do not remove the Memory Card if the Memory Card indicator is lit.
Doing so may damage the Memory Card or the V530-R160 itself.

Memory Card indicator

▼
3. Open the card lock.

4. Press the eject button over the Memory card slot.
The memory card will spring out a little.

Eject button

5. Pull the Memory Card straight out from the slot.
■ Using Memory Cards in a Personal Computer

The V530-R160's Memory Cards can be used in a personal computer with a PC Card drive (PCMCIA2.0/JEIDA4.1 or higher, type II compatible) or Compact Flash TM drive.
The Memory Card must be inserted into a PC Card Adapter in order to be used in a PC Card drive.
PC Card Adapter

Recommended Model

Name	Manufacturer	Model
PC Card Adapter	OMRON	HMC-AP001

SECTION 3
Connection to the Host

This section describes how to connect host devices through a parallel I/O or serial interface.

Connecting through the Parallel I/O

This section explains how to connect inputs and outputs to the V530-R160 through its parallel I/O to input signals such as reading triggers, or output signals such as reading judgements (OK/NG).

Either the "I/O terminals" or "I/O connector" can be used for the parallel I/O. The I/O terminals and I/O connector cannot be used simultaneously.

When the required control signals are being connected to the I/O terminals, attach the control wires to the included connector (Phoenix MC1.5/10-STF-3.5) and then insert the connector into the V530-R160.

When you want to use the parallel I/O to output reading judgements by inputting a trigger, prepare a parallel I/O cable (order separately) and connect it to the I/O connector.

For details on how to set the communication specifications and the I/O format, see *SECTION 8 Communications with the Host.*

I/O Terminal Connections

■ Connecting Method

Wire the cable carrying the control signals to the connector that was included with the V530-R160 and insert the connector into the V530-R160. The following diagram shows the I/O allocation of the V530-R160's I/O terminals. Just wire the terminals that are needed.

TRIG A	(Input signal: Reading trigger (One shot reading))
RESET	(Input signal: Restarts the V530-R160)
COMIN	(Common for input terminals)
RUN	(Output signal: ON for RUN mode)
ERROR	(Output signal: ON when error occurred)
OK/NG	(Output signal: Outputs reading judgements)
BUSY	(Output signal: ON while processing)
GATE	(Output signal: ON for set output time)
ALARM	(Output signal: ON when a Trend Monitor error occurs)
COMOUT	(Common for output terminals)

*COMOUT is connected to COMOUT1 and COMOUT3 of the I/O connector.

NOTICE Do not use RESET input immediately after the power is turned ON. When using RESET input to synchronize execution timing, wait at least 1 second after turning ON the V530-R160 power supply before turning ON the RESET terminal.

CHECK! Use DC power supplies with safe extra low-voltage circuits for COMING in order to prevent high voltages. If UL recognition is required, use a UL class II power supply.

■ Recommended Wire Size

0.14 to 1.5 mm² (The maximum cable length is 30 m.)

1. Use a flat-blade precision screwdriver to loosen the connector's set screw.

Counter-clockwise

▼
2. Insert the signal wire.

▼
3. Tighten the set screw to secure the wire. Tighten to a torque of 0.22 to 0.25 N·m.

Clockwise

▼
4. Insert the connector into the V530-R160.

5. Tighten the connector's mounting screws.
Tighten to a torque of 0.22 to 0.25 N·m.

SECTION 3 Connecting through the Parallel I/O

I/O Connector Connections

Use a F160-VP Parallel I/O Cable (order separately) to connect to the V530-R160's I/O connector. Align the connectors and insert the cable's connector straight into the V530-R160's I/O connector. Tighten the connector's mounting screws to secure the connection.

F160-VP Parallel I/O Cable (2 m)

Wire color

FG terminals

Marking

Use an appropriate ground (100 Ω max.).
NOTICE
- Turn OFF the power to the V530-R160 before connecting or disconnecting cables. Peripheral devices can be damaged if connected or disconnected with the power supply turned ON.
- A cover is screwed onto the connector when the V530-R160 is shipped. When not using the I/O connector, leave the cover in place to protect against dust, dirt, and static electricity.

Pin	Signal	Wire color	Marking (Black)	Function	Pin	Signal	Wire color	Marking (Red)	Function
A1	RESET	Light brown	■	Restarts the V530-R160.	B1	COMIN	Light brown	■	Common for input signals

A17	DO9	Yellow	■■■■		B17	DO10	Yellow	■■■■	Do not use.
A18	DO11	Green	■■■■		B18	DO12	Green	■■■■	
A19	DO13	Gray	■■■■		B19	DO14	Gray	■■■■	
A20	ALARM	White	■■■■	ON when a Trend Monitor error occurs.	B20	COMOUT3	White	■■■■	Common for DO9 to DO15

Note: Pins A9 to A11 and B9 to B10 are for control signals.

NOTICE Do not use RESET input immediately after power is turned ON. When using RESET input to synchronize execution timing, wait at least 1 second after turning ON the V530-R160 power supply before turning ON the RESET terminal.

CHECK! Use DC power supplies with safe extra low-voltage circuits for COMIN in order to prevent high voltages. If UL recognition is required, use a UL class II power supply.

■ Making a Parallel I/O Cable

A parallel I/O cable can be assembled using the connector and cover listed in the following table or equivalent components. Keep the cable length less than 30 m.

	Manufacturer	Model
Connector	Fujitsu	FCN-361J040-AU
Cover	Fujitsu	FCN-360C040-B

CHECK! Double-check the connector wiring for mistakes before turning ON the power supply for the first time.

Internal Specifications

Input Specifications

Item	Specification	
Model	V530-R160E (NPN mode)	V530-R160EP (PNP mode)

OFF leakage current	0.1 mA max.	
Internal circuits		

CHECK!

The I/O contacts are shared by the I/O terminals and I/O connector. The following diagram shows the wiring diagram for the STEP signal as an example.
Connecting through the Serial Interface

The V530-R160's serial interface (RS-232C/RS-422 connector) can be used to connect input signals such as reading triggers or output signals such as reading judgements. Additionally, data that has been set in the V530-R160 can be backed up in a personal computer. The connection method is explained here.

For details on how to set the communication specifications and the I/O format, see *SECTION 8 Communications with the Host*.

■ Points to Check before Starting Communications

Check the following points before starting communications using the serial interface.

Points to check	
Is the cable connected properly? Check the cable type, pin numbers, and signals names.	p.61

Are the **SYS/Communication** settings appropriate?
• Is the communications mode setting at **SYS/Communication/RS-232C/ 422** appropriate?
    For a no-protocol connection ••• **Normal**
    For a host link connection ••• **Host link**
• When the 1:1 connection is made, is the **SYS/Communication/Multi-drop** setting **OFF**?
• Is the **SYS/Communication/Data Output Setting/Polling** setting **OFF**?
	
	p.206 (Sec.8)
	p.236 (Sec.8)
	p.209 (Sec.8)
	
	p.210 (Sec.8)

Is the controller set to the **RUN** mode?	–

If there is no problem with these settings but proper communications cannot be established, see *SECTION 9 Troubleshooting*.

CHECK!

Refer to page 261 (Sec.9)

Connector

The V530-R160's RS-232C/422 Connector is a D-SUB female connector (M2.6). The pin allocation is shown below.
Pin	Signal	Function
1	FG	Protective frame ground
2	SD	RS-232C
3	RD	RS-232C
4	NC	Not connected
5	RDB(RD+)	RS-422
6	RDA(RD-)	RS-422
7	SDB(SD+)	RS-422
8	SDA(SD-)	RS-422

Connection

Align the connectors and insert the cable's connector straight into the V530-R160's I/O connector. Tighten the connector's mounting screws to secure the connection.
NOTICE

• Turn OFF the power to the V530-R160 before connecting or disconnecting cables. Peripheral devices can be damaged if connected or disconnected with the power supply turned ON.

• The connector is capped when the V530-R160 is shipped. When not using the serial interface, leave the cap in place to protect against dust, dirt, and static electricity.

SECTION 4
Basic Operations

This section describes the basic menu operations.

Starting the Controller

Enter the controller's menu.

1. Be sure that the basic system components have been connected correctly.

📖 Refer to page 36 (Sec.2).
2. Turn ON the power supply on the monitor.

3. Turn ON the power supply to the V530-R160.

▼

The Camera/Monitor setting screen will be displayed.

4. When using Intelligent Lighting, select **LTC20**.

            End
```

▼
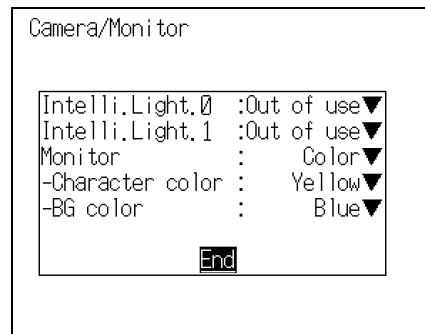

5. Select the monitor type to be connected.

6. When connecting a color monitor, select **Character color** and **BG color**.

7. Select **End**.

▼

The main screen will be displayed.

```
0.Scn 0▼MON ▼     ----   ---ms
                      Freeze( 0)
```
When the settings have been completed, it is useful to use **Startup** Mode when actually operating the V530-R160.

CHECK! **Startup** Mode is used to set the startup conditions (display screen) when the V530-R160 is next started. For example, set the V530-R160 to start in **RUN** Mode. This will allow readings to be started immediately and will make day-to-day operations easier.

Refer to page 186 (Sec.7).

NOTICE Never input the RESET signal or turn OFF the power when startup messages are displayed. Data may be lost, and the V530-R160 may not operate properly the next time it is started.

Basic Knowledge of Operations

Input Devices

Menu operations are performed on the Console.
The basic functions of the Console keys are as follows.

TRIG (trigger) Key

ESC (escape) Key ———————— ENT (enter) Key

Up, Down, Left, and Right Keys

SHIFT Key

Key	Function
ESC Key	Returns the cursor to the previous menu display or operation.
TRIG Key	Executes reading.
ENT Key	Executes a function or sets a value.
SHIFT Key	Must be pressed in combination with another key to have any affect. Specific functions are assigned to **SHIFT** + another key for specific screens.
Up, **Down**, **Left**, and **Right** Keys	**Up/Down** Keys: Used to move the cursor up and down to select items. Also used to set values. The **Up** Key increases a value by 1 and the **Down** Key decreases a value by 1. Hold down the **Up** or **Down** Key to quickly increase or decrease a value. **Left/Right** Keys: Used to move the cursor left or right.

Screen Displays

■ Basic Screen Configuration

Scene Number
There are 10 scenes. Setting different measurement conditions for each one allows easy switching between different set-ups.

Mode (See note 1.)
The current mode is displayed.

`0.Scn 0 ▼ MON ▼     ----   ---ms`

`Freeze( 0)`
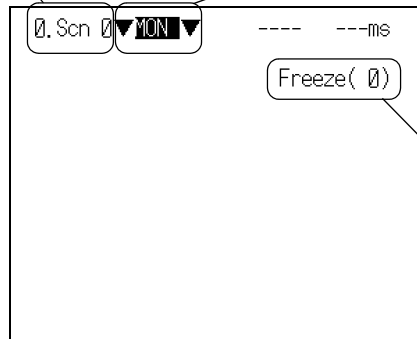

The type of image being displayed is shown. (See note 2.)

Refer to page 72.

Note 1:

Mode

Display	Description
SET	Used to set reading conditions.
MON	Used to confirm the reading can be properly performed under the set conditions. The reading judgements are displayed on the monitor only. The results cannot be output to the host.
RUN	Used to read codes. The reading judgements are output to a host via the serial interface.
SYS	Used to set system conditions for the V530-R160.
TOOL	Provides the data backup menu and memory card-related menus. Used to back up setting data or image data to a computer or a Memory Card.
SAVE	Used to save setting data to flash memory. If new settings have been made, be sure to save the data before quitting.

SECTION 4 Basic Knowledge of Operations

Note 2:

Display Image

Display	Description
Freeze □	A still image immediately after reading is displayed. The memory number (0 to 35) under which the image is stored is displayed in □. When reading moving objects, display freeze images.
Through	The image currently caught by the Camera is displayed. When reading is performed on through images, a delay due to the command input timing will occur before starting to load images. This delay is included in the reading time shown in the **MON** (monitor) and **RUN** mode.
Memory □	Saved images that were captured previously are displayed. Images that comply with the save condition (Only NG/All) are saved in memories 0 to 35. When backing up saved images in a PC or Memory Card, specify the Memory □.
Image 0	This is an image with **0.Image Adjust/Filtering** implemented. The image read is the image after this filtering.
Image 1	This is the image used internally when **0.Image Adjust/Filtering retry** is executed.
Image 2	This is the image used internally when **0.Image Adjust/Filtering retry** is executed.

Changing Options

Items with an inverted triangle after them have a list of alternatives. The method for selecting the alternatives is given here.
The explanation given here uses the **Camera/Monitor** system setting as an example.

Refer to page 181 (Sec.7).

1. Move the cursor to the item to be selected.
Select **Monitor** here.

2. Press the **ENT** Key.

```
Camera/Monitor

 Intelli.Light.0  :Out of use▼
 Intelli.Light.1  :Out of use▼
 Monitor          :    Color▼
 -Character color :   Yellow▼
 -BG color        :     Blue▼
              End
```
▼
The selections will be displayed.

3. Use the **Up**/**Down** Keys to move to the target position.

4. Press the **ENT** Key.

```
Camera/Monitor

 Intelli.Light.0  :Out of use▼
 Intelli.Light.1  :Out of use▼
 Monitor          :    Color▼
 -Character color :    Color▼
 -BG color        :Monochrome▼
              End
```

▼
The setting will be registered.

```
Camera/Monitor

 Intelli.Light.0  :Out of use▼
 Intelli.Light.1  :Out of use▼
 Monitor          :Monochrome▼
 -Character color :   Yellow▼
 -BG color        :     Blue▼
              End
```

SECTION 4 Basic Knowledge of Operations
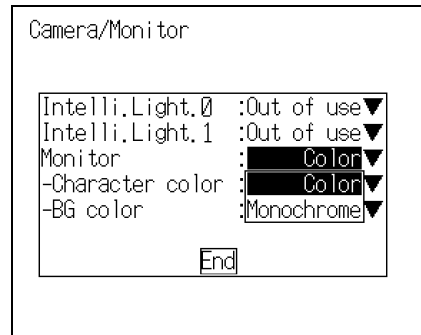

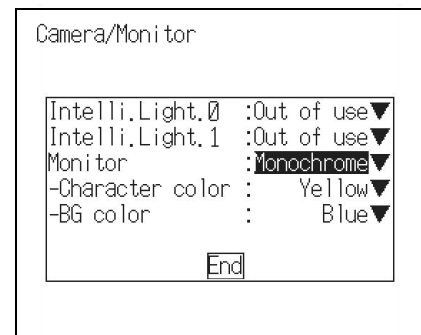

Inputting Values
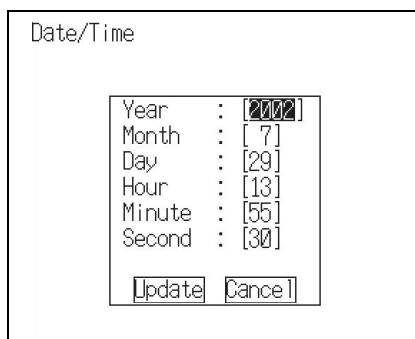

This section explains how to input values when setting reading conditions or communications specifications.

The explanation given here uses the **Date/Time** system setting as an example.

📖 Refer to page 188 (Sec.7).

▼

1. Move the cursor to the item whose value is to be changed.

2. Press the **ENT** Key.
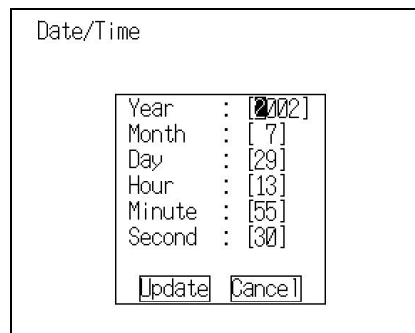

```
Date/Time

        Year    : [2002]
        Month   : [ 7]
        Day     : [29]
        Hour    : [13]
        Minute  : [55]
        Second  : [30]

          [Update] [Cancel]
```

▼

The cursor will change to a cursor the size of a single digit.

3. Move the cursor to the digit to be changed.
Left/Right Keys: To move the cursor left or right.
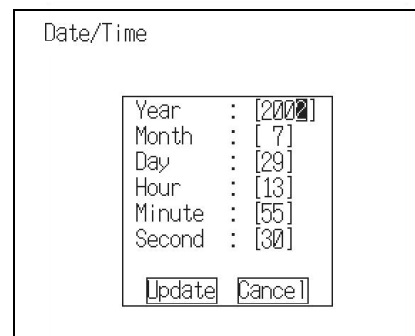

```
Date/Time

        Year    : [2002]
        Month   : [ 7]
        Day     : [29]
        Hour    : [13]
        Minute  : [55]
        Second  : [30]

          [Update] [Cancel]
```

4. Change the value.

Up Key: To increase the value.
Down Key: To decrease the value.

5. Repeat these steps to change other values.

6. Press the **ENT** Key.

```
Date/Time

        Year    : [2002]
        Month   : [ 7]
        Day     : [29]
        Hour    : [13]
        Minute  : [55]
        Second  : [30]

          [Update] [Cancel]
```

▼

The values will be set.

Inputting Characters

This section explains how to input characters in file names, comments etc.

The software keyboard shown below is displayed on the screen where characters are input.

These characters can be input.

```
A B C D E F G H I J K L M N
O P Q R S T U V W X Y Z
a b c d e f g h i j k l m n
o p q r s t u v w x y z
0 1 2 3 4 5 6 7 8 9 . - _ !
# $ % ' ( ) ^ `
SPC DEL BS  INS ←  →  END
```
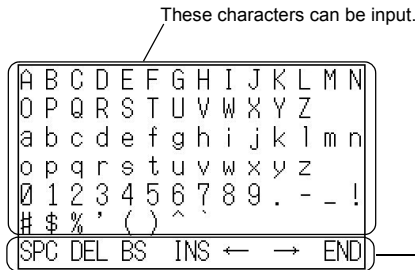

SPC	Insert a space.
DEL	Deletes 1 character to the right of the I cursor.
BS	Deletes 1 character to the left of the I cursor.
INS	Switches between insert (default)/overwrite.
←	Moves the I cursor to the left.
→	Moves the I cursor to the right.
END	Ends character input.

▼

1. Move the cursor to the character to be input.

2. Press the **ENT** Key.

I cursor   Cursor

```
Make directory
 [I        ]

         A B C D E F G H I J K █ M N
         O P Q R S T U V W X Y Z
         a b c d e f g h i j k l m n
```

▼
The character is set and the I cursor moves one space to the right.

3. Repeat these steps to input more characters.

```
Make directory
 [LI       ]

         A B C D E F G H I J K █ M N
         O P Q R S T U V W X Y Z
```

▼
4. Once all required characters have been input, move the cursor to **END**.

5. Press the **ENT** Key.

```
Make directory
 [LI       ]

         A B C D E F G H I J K L M N
         O P Q R S T U V W X Y Z
         a b c d e f g h i j k l m n
         o p q r s t u v w x y z
         0 1 2 3 4 5 6 7 8 9 . - _ !
         # $ % ' ( ) ^ `
         SPC DEL BS  INS ←  →  END

ENT:Select              Ins.
```

▼

The characters will be set.

Understanding Setting Operations

This section explains how to set reading conditions using Menus and the basic steps before starting readings.

step**1** Select the Code and Capture the Image

1. Move the cursor to **MON** (monitor) using the **Right** Key and press the **ENT** Key.

```
0.Scn 0▼MON ▼      ----  ---ms
                        Freeze( 0)
```

▼

A list of modes will be displayed.

2. Select **SET**.

```
0.Scn 0▼MON ▼      ----  ---ms
        SET
        MON                 Through
        RUN
        SYS
        TOOL
        SAVE
```

▼
Enter the SET mode.

3. Select **DataMatrix** or **QRCode**.
The explanation here assumes that **DataMatrix** is selected.
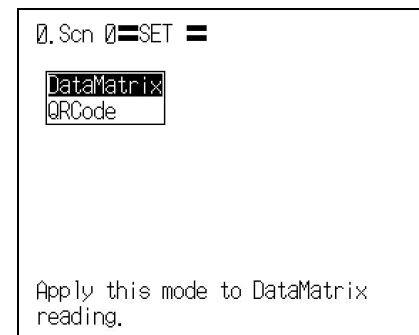

4. Press the **ENT** Key.

```
0.Scn 0═SET ═

    DataMatrix
    QRCode

Apply this mode to DataMatrix
reading.
```

▼

The setting items will be displayed.

```
0.Scn 0 ═SET ═

 ▌0.Image Adjust
  1.Read DataMatrix

Select the Shutter Speed,
Filtering and BGS Levels.
S+ESC:Switch over to QRCode
```

To change the code to be read, press the **SHIFT** + **ESC** Keys.

CHECK! The screen in **3.** will return.

5. Press the **ESC** Key.

▼
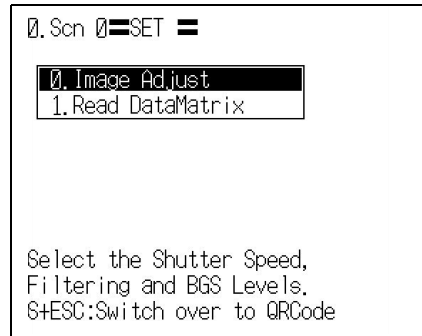

The image read from the camera will be displayed.

```
0.Scn 0 ▼MON ▼    ----   ---ms
                          Through

         ▓▓▓▓▓
         ▓▓▓▓▓
         ▓▓▓▓▓
```

6. Check that the code of the reading object is displayed on the screen.

If it is not displayed, press the **SHIFT** + **Down** Keys to change the displayed screen to **Through** and then adjust the position so that the code of the object appears in the center of the screen.
Adjust the object position.

7. Adjust the Camera Focus.

When using an F150-S1A-2D Camera
Adjust the focus by turning the focusing ring of the CCTV Lens.

CHECK! Change the shutter speed when the object is moving quickly, causing the image to blur.

Refer to page 93 (Sec.5).

When using a Camera with an Intelligent Lighting
Since the lens has a fixed focal point, adjust the position of the camera by referring to the setting distance information in *SECTION 2 Installation and Connections* in order to focus it.

CHECK! The light level can be adjusted from the V530-R160.

Refer to page 100 (Sec.5).

▼

This completes the preparations for capturing the image.

step2 Set Reading Conditions

This section explains how to set the basic functions required for reading.

CHECK! There are many other functions apart from these: for details, see *SECTION 5 Setting Reading Conditions*.

Refer to page 91 (Sec.5).

1 Entering the SET Mode

1. Move the cursor to **MON** (monitor) and press the **ENT** Key.

```
0.Scn 0▼MON ▼     ----  ---ms
        SET
        MON              Through
        RUN
        SYS
        TOOL
        SAVE
```
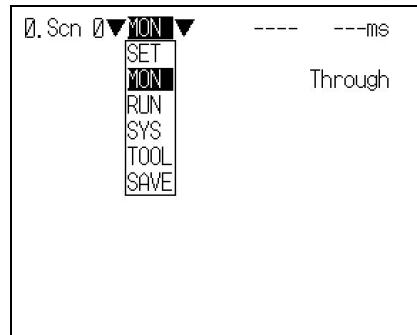

A list of modes will be displayed.

2. Move to **SET** using the **Up** Key and press the **ENT** Key.

```
0.Scn 0▼MON ▼     ----  ---ms
        SET
        MON             Freeze( 0)
        RUN
        SYS
        TOOL
        SAVE
```
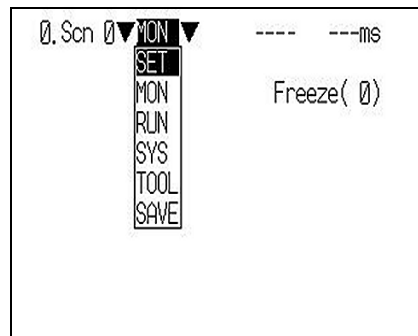

Enter the SET mode.

CHECK! To change the code to be read, press **SHIFT** + **ESC** Keys.

```
0.Scn 0■SET ■

  0.Image Adjust
  1.Read DataMatrix

Select the Shutter Speed,
Filtering and BGS Levels.
S+ESC:Switch over to QRCode
```
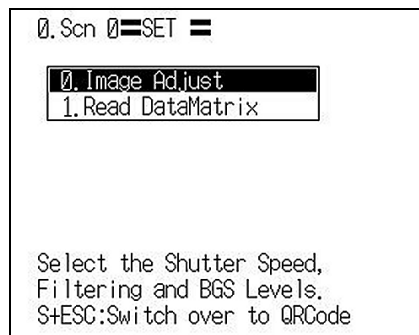

2 Selecting Shutter Speed

1. Select **0. Image Adjust**.

```
0.Scn 0▬SET ▬

 ┌──────────────────────┐
 │ 0.Image Adjust       │
 │ 1.Read DataMatrix    │
 └──────────────────────┘

Select the Shutter Speed,
Filtering and BGS Levels.
S+ESC:Switch over to QRCode
```

▼
The Image Adjust selections will be displayed.

2. Select **Shutter speed**.

```
0.Scn 0▬SET ▬0.Image Adjust

 ┌─────────────┐
 │Select camera│
 │Shutter speed│
 │Filtering    │
 │Filtering retry│
 │BGS levels   │
 │Light control│
 └─────────────┘

Select Shutter Speed.
```
▼
The Shutter speed selections will be displayed.

3. Select the shutter speed according to the light level of the image.

```
Shutter speed

┌────────┐
│1/  100s│
│1/  500s│
│1/ 2000s│
│1/10000s│
└────────┘
```

4. Press the **ENT** Key.

▼
The setting will be registered and the screen in **2.** will return.

3 Registering Models of Finder Pattern

Register an image of the finder pattern (the L-shape described by 3 of the corners) as the model. Use the teaching function for registration. Using the teaching function, a reading image is obtained, measurement is performed on this image, and based on the results of this measurement, parameters for reading conditions (symbol color, Right & Left reverse) are automatically determined. The teaching results can be checked or changed with **Code settings.**
Finder pattern

? What is Black & White Reverse? 📖 Refer to page 284 (Sec.10).

? What is Right & Left Reverse? 📖 Refer to page 284 (Sec.10).

CHECK! When registering patterns, be sure to carry out reading by trigger input and complete teaching for each pattern registration. You cannot register patterns consecutively without performing teaching processing.

CHECK! The ECC level is set automatically when the matrix size is selected.

Matrix size	ECC level
10×10 to 64×64 8×18 to 16×48	ECC200
9×9 to 25×25	ECC000-140

CHECK! The object code can be read even if it is inclined.
Set the range for the angle of inclination.
The wider the range, the longer the processing time will be.

Example: At $0° \pm 30°$:

30°   0°   -30°
Reading is possible when the object is within the range -30° to 30°.

CHECK! 📖 For the method of pattern registration when using QRCode : Refer to page 129 (Sec.5).

1. Select **1. Read DataMatrix**.

CHECK!

To change the code to be read, press **SHIFT**+ **ESC** Keys.

```
0.Scn 0═SET ═

 ┌─────────────────┐
 │ 0.Image Adjust  │
 │ 1.Read DataMatrix│
 └─────────────────┘

Select the Reading Settings.
S+ESC:Switch over to QRCode
```

▼

The initial screen for the DataMatrix reading will be displayed.

```
Pattern settings
Reading settings
Display settings
TrendMon settings
```

2. Select **Pattern settings**.

▼

The **Pattern list** will be displayed.

3. Select the pattern number to be registered.

Up/Down/Left/Right Keys: To move among pattern numbers.

The selected pattern number is indicated with a solid-line frame.

```
Pattern list
┌───┐ ┌ ┐ ┌ ┐ ┌ ┐
│   │
└───┘ └ ┘ └ ┘ └ ┘
┌ ┐ ┌ ┐ ┌ ┐ ┌ ┐

└ ┘ └ ┘ └ ┘ └ ┘
Pattern 0 Not Regist
Press ENT key and
register Pattern.
ENT:Regist  ESC:End
```
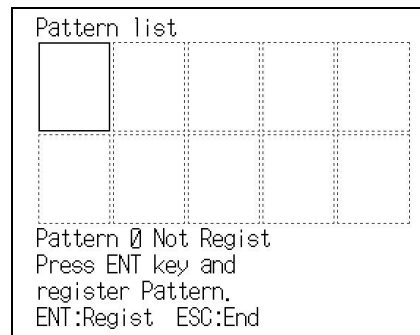

4. Press the **ENT** Key to validate the setting.

▼

The Pattern settings selections will be displayed.

```
Pattern registration
Code settings
Reference pattern
Search region
```

5. Select **Pattern registration**.

The Pattern registration screen will be displayed.

```
0.Scn 0■SET ■1.Read DataMatrix
Pattern 0
                            Through

Select image with SHIFT+↑↓Key
and input ENT key. ESC key is
back to previous display.
```

6. Select the image to be registered by pressing
the **SHIFT** + **Up** or **Down** Keys.

7. Press the **ENT** Key to validate the setting.

▼

The Matrix Size selections will be displayed.

```
0.Scn 0■SET ■1.Read DataMatrix
Pattern 0
10×10              Freeze( 0)
12×12
14×14
16×16
18×18
20×20
22×22
24×24
↑↓     Select the Matrix Size
       of DataMatrix.
```

8. Select the Matrix Size.

▼
The Length of Finder Pattern setting screen will be dis-
played.

```
0.Scn 0■SET ■1.Read DataMatrix
Pattern 0
                        Freeze( 0)

Len=101(6.3),101(6.3) Angle=90
Finder Pattern.
(193,220)(193,320)(293,320)
```

9. Select the first end point of the L shape.

Draw the L shape by matching it to the shape of the
code.

Up/Down/Left/Right Keys: To move the cursor.
Shift + Up/Down/Left/Right Keys: To move the cursor
                                 10 times faster.
At the bottom left of the screen are displayed the length of the L shape, the number of pixels per cell
(the numerical value in parentheses), the angle, and the coordinates of the three points. Adjust the
CHECK! field of vision so that there are at least 5 pixels per cell.

Refer to pages 46 to 48 (Sec.2).

SECTION 4 Understanding Setting Operations

? What is a pixel? Refer to page 283 (Sec.10).

? What is a cell? Refer to page 284 (Sec.10).

▼

10. Press the **ENT** Key to validate the setting.

▼

11. Specify the second end point and the third end point so that they fit the shape of the code.

First end point

Second end point — Third end point
12. Press the **ENT** Key to validate the setting.

▼

The selections for the direction of the code will be displayed.

13. Select the direction of a code whose pattern is registered and confirm it by pressing **ENT** Key.

0°	90°	180°	270°

```
0.Scn 0═SET ═1.Read DataMatrix
    0                    Freeze( 0)
   90
  180
  270

Select the direction of
DataMatrix.
```

▼
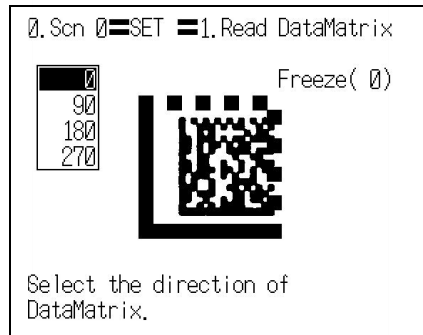

The selections for the permissible angle range will be displayed.

14. Select the range of inclination for the code, and press the **ENT** Key.

Example: Selecting ±**45** when the direction of the code is 0°

Set a range of inclination of -45° to 45°.

```
0.Scn 0▄SET ▄1.Read DataMatrix
                        Freeze( 0)
 ±   5
 ±  10
 ±  15
 ±  30
 ±  45
 ±  90
 ±180

Select the range of angle.
```

45°   0°   -45°
CHECK! Since widening the angle increases the time it takes to read the code, set a range that is not too large but is sufficient.

▼

The Pattern registration confirmation screen will be displayed.

15. Press the **ENT** Key.
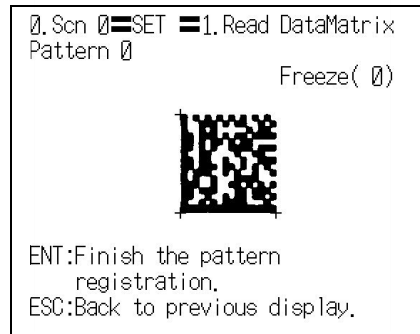

```
0.Scn 0▄SET ▄1.Read DataMatrix
Pattern 0
                        Freeze( 0)

ENT:Finish the pattern
     registration.
ESC:Back to previous display.
```

▼

The setting will be registered and the screen in **5.** will return.

```
Pattern registration
Code settings
Reference pattern
Search region
```

16. Press the **ESC** Key four times.

▼

SECTION 4 Understanding Setting Operations

The Monitor mode screen will return.

17. Press the **TRIG** Key to perform teaching.

```
0.Scn 0▼MON ▼      ----   ---ms
                          Through
```

▼
If the result of teaching is OK, the Symbol color, Right & Left reverse, and Matrix Size information is displayed and the pattern is registered.
Repeat these steps to register multiple patterns.

```
0.Scn 0▼MON ▼      OK   128ms
Set Pattern No.:0
Set Symbol color:Black R&L Reverse:OFF    Freeze( 0)
Set Matrix Size:16-16
Set ECC Level:ECC200
Set range of angle:[-5:5]
Set Correlation:60
Set Timeout:2000
Set Number of retries:0

Size of Cell=8.6.8.9[Pixel/Cell]
Error Correction=0
Pattern No.=0

DataMatrix
Color:BLK R&L:OFF 16×16
```
CHECK! If the result of the teaching is NG, go to the screen at **3.** (pattern list screen), delete the pattern, adjust the camera focus, lighting and so on, then carry out pattern registration again.

CHECK! If reading is performed successfully, the teaching function will automatically turn OFF. If the result of the reading is NG, the teaching function will stay ON. To turn the teaching function OFF, go to the screen in **3.** (pattern list screen). To redo pattern registration, enter **SET** mode and start the procedure again from **1.**.

step3 Perform Tests

Perform the reading under the conditions that have been previously set.

Adjust the reading conditions by referring to the result of the test. When a test is performed in the **MON** (monitor) mode, the test is completed internally by the V530-R160 and the reading judgements are not output to the host.

1. Press the **ESC** Key while the **SET** mode screen is displayed.

```
0.Scn 0≡SET ≡

 0.Image Adjust
 1.Read DataMatrix

Select the Shutter Speed,
Filtering and BGS Levels,
S+ESC:Switch over to QRCode
```

▼

The Monitor mode screen will be displayed.

2. Press the **TRIG** Key.

```
0.Scn 0▼MON ▼      ----    ---ms

                             Through
```

▼
One reading will be executed and the reading judgements will be displayed on the screen.

CHECK! When the **TRIG** Key is pressed in the **RUN** mode, the reading judgement (in this case, ABCDE12345) will be output to the host.

```
0.Scn 0▼MON ▼      O K   143ms

                          Freeze( 0)

DataMatrix
```
step4 Start Reading

Enter the **RUN** mode to perform readings.

Reading judgements can be output to host devices via the serial interface.

For line operation, use this **RUN** mode.

1. Move the cursor to **MON** (monitor) and press the **ENT** Key.

```
0.Scn 0▼MON ▼      ----  ---ms
                        Freeze( 0)
```

▼
A list of modes will be displayed.

2. Select **RUN**.

```
0.Scn 0▼MON ▼      O K  143ms
         SET
         MON            Freeze( 0)
         RUN
         SYS           ▓▓▓▓▓
         TOOL          ▓▓▓▓▓
         SAVE          ▓▓▓▓▓

DataMatrix
```
▼
The RUN mode screen will be displayed.

3. Input a reading trigger.

```
0.Scn 0▼RUN ▼      O K  142ms
                        Through

                    ▓▓▓▓▓
                    ▓▓▓▓▓
                    ▓▓▓▓▓

DataMatrix
```

▼
Reading is performed.

Various commands can be input from a host device in addition to the trigger input.

Via the parallel I/O

Via the serial interface port using Normal communications

Via the serial interface port using Host Link communications

Reading judgements can be output to host devices via the serial interface.

Via the serial interface port using Normal communications

Via the serial interface port using Host Link communications

Read images can be stored.

Up to 35 images can be stored in memory. Once 35 images have been stored, the existing images will be overwritten in order starting with the oldest.

Move to **SYS/Image storing** and change the conditions for image storage.

To store NG images only, select **Only NG**, and to store images regardless of the reading result, select **All**.

Read images can also be backed up automatically to the Memory Card.

Turn ON **SYS/ Image storing /Store to MemCard**.

Reading can be repeated for stored images.

Display the desired stored image using the **SHIFT** + **Up/Down** Keys and press the **SHIFT** + **TRIG** Keys to execute reading.

Reading can also be repeated for freeze images without re-inputting the image using the **SHIFT** + **TRIG** Keys. By reading an image again after adjusting the reading conditions, you can check if the conditions are appropriate.

The light will gradually become dimmer as it is used, so adjust the reading conditions periodically.

The light dims about 20% in 1500 hours of use. (Applies to Intelligent Lighting)

SECTION 4 Understanding Setting Operations

step 5 Save Settings and Exit the V530-R160

Be sure to save the revised setting data to flash memory before turning OFF.

NOTICE   As the V530-R160 loads data from flash memory at startup, any new data will be lost if it is not saved to flash memory. The stored images cannot be saved to flash memory and are cleared when the power is turned OFF. The images must be backed up in the computer or the Memory Card if you want to save them long term.

1. The **MON** (monitor) mode or **RUN** mode screen will be displayed.

```
0.Scn 0▼MON ▼      OK   167ms
                        Freeze( 1)
```

2. Move the cursor to **MON** or **RUN** and press the **ENT** Key.

▼

The mode selections will be displayed.

3. Select **SAVE**.

```
0.Scn 0▼MON ▼      OK   167ms
         SET            Freeze( 1)
         MON
         RUN
         SYS
         TOOL
         SAVE
```

▼
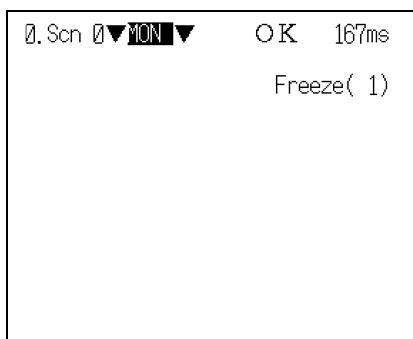

The confirmation message will be displayed.

4. Select **Execute**.

NOTICE   Never input the RESET signal or turn OFF the power while saving or loading. Data may be lost, and the V530-R160 may not operate properly the next time it is started.

```
0.Scn 0▼MON ▼      OK   167ms
                        Freeze( 1)

   Setting data will be saved.
      Execute  Cancel
```

▼
When saving has been completed, the screen in **1.** will return.

5. Turn OFF the power supply and exit the V530-R160.

SECTION 5
Setting Reading Conditions

Set the conditions for reading the code. This section explains how to adjust the image so that the code is caught clearly by the Camera, and the method for setting the Data-Matrix and QRCode reading conditions.

Adjusting the Image (Image Adjust)

To ensure accurate and efficient reading, adjust the image so that the code is caught clearly by the Camera.

Within the same scene, even if the code reading settings (**Read DataMatrix**, **Read QRCode**) are changed, the settings relating to image input are retained.

CHECK!

Switching Cameras

Two cameras can be connected to one controller. The image from the Camera selected here is the one that is read. The setting on shipment from the factory is **Camera 0**.

1. Select **0. Image Adjust**.

```
0.Scn 0═SET ═

┌─────────────────┐
│ 0. Image Adjust │
│ 1. Read DataMatrix│
└─────────────────┘

Select the Shutter Speed,
Filtering and BGS Levels.
S+ESC:Switch over to QRCode
```

▼
The Image Adjust selections will be displayed.

2. Select **Select camera**.

```
0.Scn 0═SET ═0.Image Adjust

┌─────────────┐
│Select camera│
│Shutter speed│
│Filtering    │
│Filtering retry│
│BGS levels   │
│Light control│
└─────────────┘

Select camera.
```

▼
The Camera selections will be displayed.

3. Select **Camera 0** or **Camera 1**.

4. Press the **ENT** Key.

```
Select camera

Camera 0
Camera 1
```

▼
The setting will be registered and the screen in **2.** will return.

Shutter Speed

If the image is unsteady, adjust the shutter speed.

Speed of
the object	Shutter speed
Slow	1/100s
↕	1/500s
	1/2000s
Fast	1/10000s

(Default setting: 1/500 s)

▼
1. Select **0. Image Adjust/Shutter speed**.

```
0.Scn 0═SET ═0.Image Adjust

 Select camera
 Shutter speed
 Filtering
 Filtering retry
 BGS levels
 Light control

Select Shutter Speed.
```

▼
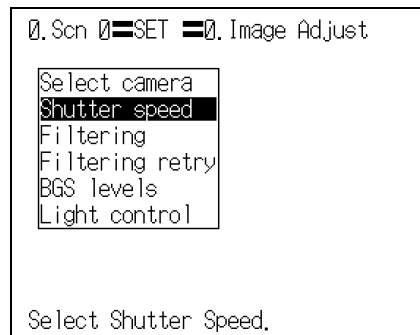

The Shutter speed selections will be displayed.

2. Select an appropriate speed while viewing the image.

```
Shutter speed

1/  100s
1/  500s
1/ 2000s
1/10000s
```

3. Press the **ENT** Key.

▼
The setting will be registered and the screen in **1.** will return.

Filtering

The image read by the Camera can be manipulated to create an image that is easier to read by using the 5 filtering methods.

Select from the five methods: **Weak smoothing**, **Strong smoothing**, **Dilate**, **Erosion**, **Median**. When a selection is made with the cursor, the image after the processing is displayed on the monitor. Select the appropriate filtering while viewing the image.

Filtering	Target	Function
OFF	–	Filtering is not performed.
Smoothing*	Reading objects with slight surface irregularity	Reduces the irregularity through smoothing. (Select either weak or strong smoothing.)
Dilate	The dots (white cells) of the code are too small.	Has the effect of increasing the size of the dots when the cells are white and the background is black.
Erosion	The dots (black cells) of the code are too small.	Has the effect of increasing the size of the dots when the cells are black and the background is white.
Median	Reading objects with slight surface irregularity	Lessens dispersion in the image while maintaining its contours.

The asterisk (*) indicates the default setting.

Example:
When **Erosion** is executed

Before filtering   After filtering

SECTION 5 Adjusting the Image (Image Adjust)
CHECK! Filter size
Enables selection of the strength of the processing when an image is manipulated.
Example: Effect of changing the filter size when executing **Erosion**

SHIFT + **ENT**

3×3
Weak

5×5
Strong

1. Select **0. Image Adjust/Filtering**.

```
0.Scn 0═SET ═0.Image Adjust

 Select camera
 Shutter speed
 Filtering
 Filtering retry
 BGS levels
 Light control

Select Filtering method.
```

▼
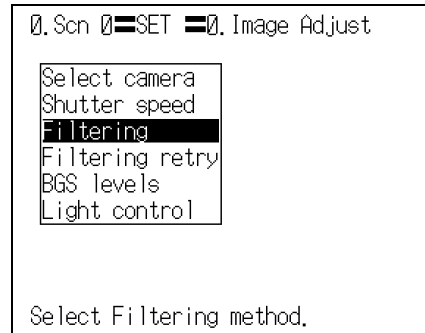

The Filtering selections will be displayed.

2. Select an appropriate filtering method while viewing the image.

SHIFT + **ENT** Keys: To change the filter size.

3. Press the **ENT** Key.

```
Filtering          Size3×3

OFF
Weak smoothing
Strong smoothing
Dilate
Erosion
Median

S+ENT:Filter size
```

▼

The setting will be registered and the screen in **1.** will return.

Filtering Retry

After **Filtering**, it is possible to add up to four more filtering steps (filter 1 to filter 4). These adjustments can enable more stable reading of the image. The controller executes the processing in order from filter 1. The filtering options that can be set are **Smoothing** and **Median**. Make the settings in order from filter 1.

Selection	Description
OFF*	Filtering is not performed.
Smoothing	For objects that have slight surface irregularity, this processing allows the surface irregularity to be lessened by gradation. Strong and Weak degrees of smoothing can be selected. The extent of the manipulation of the image can also be selected by selecting the filter size (3×3, 5×5).
Median	For objects that have slight surface irregularity, this processing allows the surface irregularity to be lessened while preserving the contour. The extent of the manipulation of the image can also be selected by selecting the filter size (3×3, 5×5).

The asterisk (*) indicates the default setting.

Example: When **Smoothing** (Filt. 1) is done after **Dilate** processing (Filtering)

After **Dilate**   After **Smoothing**

CHECK!　When this function is set ON, the reading processing time is approximately 33 ms longer for one filter.

1. Select **0. Image Adjust/Filtering retry**.

▼
The setting screen for Filtering retry will be displayed.

2. Select the filtering method for **Filt.1**.

3. Press the **ENT** Key.

```
Filtering retry

Filt.1:          OFF▼
Filt.2:          OFF▼
Filt.3:          OFF▼
Filt.4:          OFF▼

      Register  Cancel
```

▼
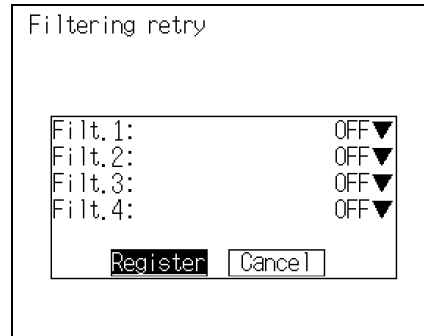

The filtering method will be saved.

4. Set the filtering methods for **Filt.2** to **Filt.4** according to your requirements, and then press the **ENT** Key.

5. Select **Register**.

```
Filtering retry

Filt.1: Weak smoothing.3x3▼
Filt.2:              OFF▼
Filt.3:              OFF▼
Filt.4:              OFF▼

      Register  Cancel
```

▼
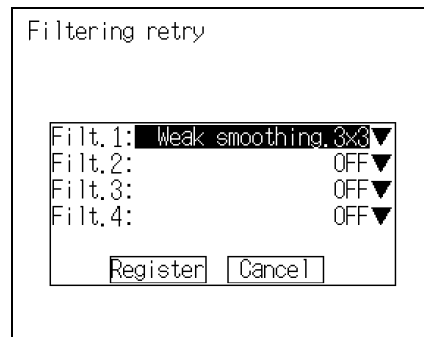

The setting will be registered and the screen in **1.** will return.

BGS Levels

This function suppresses the object's background to stabilize reading, eliminating noise and other disturbances.

Set the upper and lower limits of the BGS density while monitoring the image.

Densities lower than the set lower limit will be converted to 0 (i.e., areas with densities lower than that value will not be read), densities higher than the set upper limit will be converted to 255, and intermediate densities will be graded between 0 and 255. In other words, only the areas with densities between the set lower and upper limits will be read.

Example: Lower limit set to 150 and upper limit set to 220

Read density

Upper limit: 220 →

Lower limit: 150 →

255

0

Reading object   Background   Background density

· Image areas with densities of 149 or lower will not be read and the density will be changed to 0.

· Only image areas with densities between 150 and 220 will be read. The whole image is graded from 0 to 255.

1. Select **0. Image Adjust/BGS levels**.

```
0.Scn 0■SET ■0.Image Adjust

 Select camera
 Shutter speed
 Filtering
 Filtering retry
 BGS levels
 Light control

Select BGS Levels.
```

The BGS levels setting screen will be displayed.

2. Move the cursor to the upper value and use the **Left** and **Right** Keys to adjust the value.

```
BGS levels
                    ▌▌▌▌▌▌
               Upper [255]
               Lower [  0]
                         OK

        ▓▓▓▓
        ▓▓▓▓
        ▓▓▓▓

↑↓:Move ←→:Change
```

Right Key:	To increase the lowest digit by one.
SHIFT + **Right** Keys:	To increase the value 10 times faster.
Left Key:	To decrease the lowest digit by one.
SHIFT + **Left** Keys:	To decrease the value 10 times faster.

3. Use the same method to change the lower value.

4. Select **OK**.

▼
The setting will be registered and the screen in **1.** will return.

Light Control

When a Camera with an Intelligent Lighting is connected, the light level can be adjusted from the V530-R160. Change the settings in the **SYS/Camera/Monitor** settings menu in advance to indicate that a Camera with an Intelligent Lighting is being used.

Refer to page 181 (Sec. 7).

CHECK!

If the shutter speed is 1/10000s, adjustment up to light level 2 is possible.

The Intelligent Lighting is pulsed in synchronization with the shutter trigger, and the light level can be adjusted by changing the width of this pulse.

If the light level is set to the maximum of 7, the light ON pulse width is approximately 450 μs, and this more or less corresponds to the shutter period when the shutter speed is 1/2000s. Therefore, if the shutter speed is 1/10000s, and the light level is set to 2 or higher, the setting may be ineffective (the brightness may not change).
■ Light Control Screen
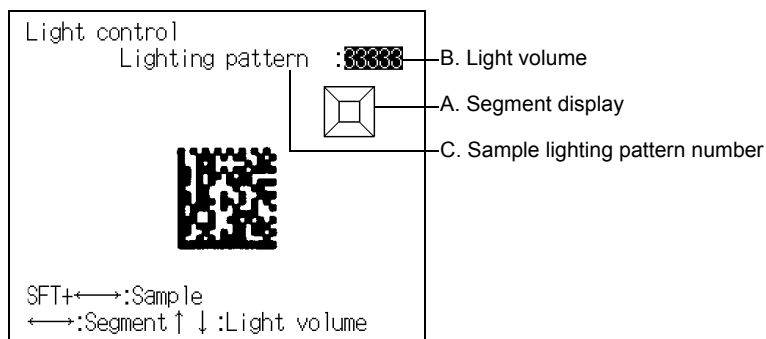

A. Segment display

Lighting can be adjusted in 5 areas.

As viewed from
this perspective

5 Areas

CHECK! The reading points are displayed with thick lines. The brightness depends on the set light level.

Refer to page 102.

B. Light volume

The light level setting for each area is shown in a separate digit of the 5-digit number. The light level settings range from 0 to 7; a value of 0 is OFF and 7 is the maximum brightness.

Lighting pattern: 3 3 3 3 3

Light level for area A
Light level for area B
Light level for area C
Light level for area E
Light level for area D
C. Sample lighting pattern number

There are 15 sample lighting patterns registered in the V530-R160.

Refer to page 102.

SECTION 5 Adjusting the Image (Image Adjust)

■ Method 1: Using a Sample Lighting Pattern

There are 15 sample lighting patterns registered, so the lighting pattern can be selected just by switching through the pattern numbers and determining which pattern gives the sharpest image. The sample pattern number can be switched by pressing the **SHIFT** Key together with the **Left** or **Right** Key.

Pattern No.	Light level	Pattern No.	Light level	Pattern No.	Light level	Pattern No.	Light level	Pattern No.	Light level
1	50000	4	07070	7	22727	10	00070	13	52222
2	03333	5	27272	8	07000	11	00007	14	17777
3	07777	6	00707	9	00700	12	51111	15	27777

■ ・・・OFF

☐ ・・・Lit (Maximum brightness)

■ Method 2: Adjusting Light Levels by Segment

The light level for each area can be set independently between 0 and 7. 0 is OFF and 7 is the brightest. After selecting one of the sample patterns, the light level in each area can be fine-tuned if necessary. Select the desired area with the **Left/Right** Keys and adjust the area's light level with the **Up/Down** Keys. The following diagrams show the order in which the areas are selected with the **Left/Right** Keys.
1. Select **0. Image Adjust/Light control**.

```
0.Scn 0═SET ═0.Image Adjust

 Select camera
 Shutter speed
 Filtering
 Filtering retry
 BGS levels
 Light control

Adjust the Intelligent Lighting
```

▼

The setting screen for Light control will be displayed.

2. Switch the sample lighting pattern number using the **SHIFT** + **Left**/**Right** Keys.

> CHECK! For fine adjustment of light levels, move to the desired digit using the **Right** and **Left** Keys and adjust the light level using the **Up** and **Down** Keys.
```
Light control
        Lighting pattern  :27272

SFT+←→:Sample
←→:Segment↑↓:Light volume
```

3. Press the **ENT** Key.

▼

The setting will be registered and the screen in **1.** will return.

Setting Reading Conditions (DataMatrix)

Set the reading conditions to suit the code of the reading object.
The explanation here deals with the settings for DataMatrix.

Pattern Settings

A finder pattern image is registered in advance, then when reading is executed a search is conducted for an image pattern similar to the input image in order to locate the code.

? What is a pattern search? Refer to page 285 (Sec.10).

Finder Pattern

Register as a pattern.

Search region
(Under normal conditions,
draw the whole screen.)

The higher correlation value
(similarity) within the search
region is detected as a finder pattern.
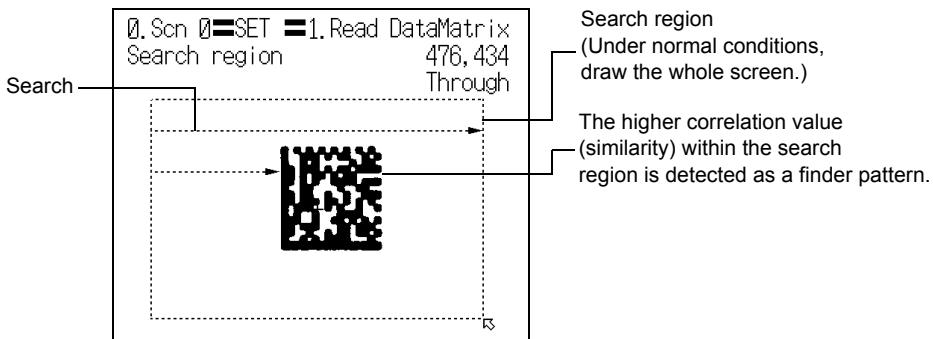

Search

■ Pattern Registration

The finder pattern image is registered as a pattern.

Up to ten patterns can be registered for one scene, and **Code Settings** and **Search Region** are set for each of these patterns. Registering multiple patterns enables reliable reading even if there is dispersion in the dot spacing and printing quality. In addition, if codes with different matrix sizes and symbol colors are registered as patterns, multiple codes can be read in one scene. This makes scene changes unnecessary.

For details on the registration method, see *SECTION 4 Basic Operations step2 Set Reading Conditions*.

Refer to page 79 (Sec.4).

Up to 10 patterns can be registered.
| Pattern 0 | Pattern 1 | Pattern 2 | Pattern 3 | Pattern 4 |

Multiple pattern registrations for a single code with dispersion, or pattern registration of codes with different matrix sizes or symbol colors

| Pattern 5 | Pattern 6 | Pattern 7 | Pattern 8 | Pattern 9 |

CHECK!   DataMatrix and QRCode cannot be mixed in pattern registrations.

CHECK!   When registering patterns, ensure a margin of at least one cell around the code.

CHECK!   Use the teaching function for pattern registration.
When registering patterns, be sure to carry out reading by trigger input and complete teaching for each pattern registration. You cannot register patterns consecutively without performing teaching processing.

SECTION 5 Setting Reading Conditions (DataMatrix)

The following setting information for pattern registration is displayed on the **Pattern list** screen.

```
Pattern list
┌───┬───┬───┬───┬───┐
│ ▓ │ ▓ │   │   │   │
├───┼───┼───┼───┼───┤
│   │   │   │   │   │
└───┴───┴───┴───┴───┘
┌─────────────────────────┐
│Pattern:0 Matrix size:20×20│
│Color:BLK R&L rev.:OFF Corr.:60│
│Priority:01  Applied rate:000%│
│ENT:Select ESC:End S+ESC:Del│
└─────────────────────────┘
```
———— Pattern setting information
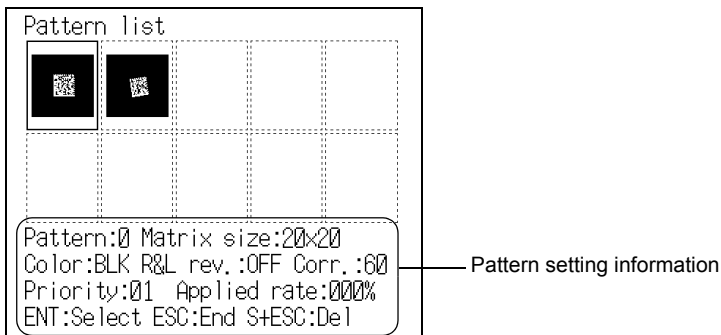

Item	Description
Pattern	Selected pattern number
Matrix size	Matrix size
Color	Symbol color of the pattern
R&L rev.	Execution/non-execution of pattern Right & Left reverse
Corr. (Correlation)	Pattern correlation value
Priority	Pattern sequence used when reading Refer to page 113.
Applied rate	Applied rate of the pattern $$\text{Applied rate} = \frac{\text{Number of times a pattern is used}}{\text{Total reads*}}$$ * The maximum number of reads is the most recent 10000.

CHECK! To register a pattern again or register a new pattern, select the pattern number, then press the **ENT** Key, and go to the **Pattern registration** screen.

Refer to page 82 (Sec.4).

▪ To delete a pattern

1. Select the pattern number of the pattern that
you want to delete from the **Pattern list** screen.

.

  Up/Down/Left/Right Keys: To move among pat-
            tern numbers.
  The selected pattern number is indicated with a
  solid-line frame.

```
Pattern list
┌──┬──┬──┬──┬──┐
│██│██│  │  │  │
├──┼──┼──┼──┼──┤
│  │  │  │  │  │
└──┴──┴──┴──┴──┘
Pattern:0 Matrix size:20×20
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **SHIFT** + **ESC** Keys.

▼

The confirmation message will be displayed.

3. Select **Execute**.

```
Delete Pattern ?

Execute  Cancel
```

▼

The pattern is deleted, and the screen in **1.** will return.

■ Code Settings

Set the conditions to apply in pattern searches.

Set the symbol color of the pattern being registered.
During teaching, the judged symbol color is automatically set here.
(Black*, white) (See note 1.)

? What is Black & White Reverse? 📖 p.284 (Sec.10)

```
Symbol color : Black▼
R&L reverse  :  OFF▼
range of angle:[  -5:   5]
Correlation  :[ 60]

    Register  Cancel
```

Set whether or not Right & Left reverse is to be executed for the pattern.
During teaching, the judged execution or non-execution of Right & Left
reverse is automatically set here. (OFF*, ON) (See note 2.)

? What is Right & Left Reverse? 📖 p.284 (Sec.10)

Set the range of inclination of the pattern.
Values that reflect the permissible ranges for code direction and angle set
at pattern registration are automatically set as the initial values.
If a mistake is made when setting the value, for example with + and -, it is
automatically corrected. (0 to 360) (See note 3.)

Set the degree of similarity between the pattern and the read code.
When reading is executed, the part with this value or higher is detected
as the finder pattern. (1 to 100; Default setting: 60) (See note 4.)

The asterisk (*) indicates the default setting.
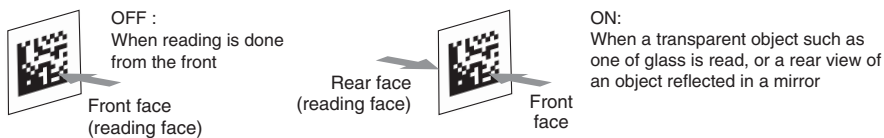

Note 1: Symbol color

Black:
When black is printed on
a white background

White:
When white is printed on
a black background

Note 2: R&L reverse

OFF :
When reading is done
from the front
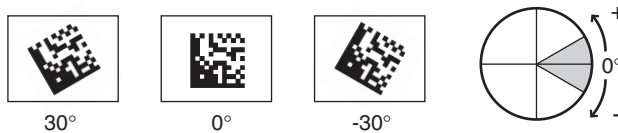

Front face
(reading face)

Rear face
(reading face)

Front
face

ON:
When a transparent object such as
one of glass is read, or a rear view of
an object reflected in a mirror

Note 3: Range of angle
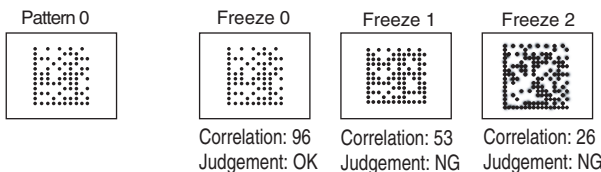

Example: When the code direction is 0° and the permissible range of the angle is ±30°, **-30:30** is automatically set. Reading is possible within a range of inclination of -30° to 30°.

30°   0°   -30°

Note 4: Correlation

Example: When the correlation value is **60**.

Pattern 0   Freeze 0   Freeze 1   Freeze 2

Correlation: 96   Correlation: 53   Correlation: 26
Judgement: OK   Judgement: NG   Judgement: NG

1. Select the pattern number of the pattern that you want to set on the **Pattern list** screen.

   Up/Down/Left/Right Keys: To move among pattern numbers.

   The selected pattern number is indicated with a solid-line frame.

```
Pattern list
▨  ▨
Pattern:0 Matrix size:20x20
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **ENT** Key.

▼

The Pattern settings selections will be displayed.

3. Select **Code settings**.

```
Pattern registration
Code settings
Reference pattern
Search region
```

▼

The setting items will be displayed.

4. Make the settings for each item.

5. Select **Register**.

```
Symbol color  : Black▼
R&L reverse   :  OFF▼
range of angle:[ -5:   5]
Correlation   :[ 60]

    Register  Cancel
```

▼

The setting will be registered and the screen in **3.** will return.

■ Reference Pattern

The registered pattern is displayed on the monitor screen and can be checked. After performing pattern registration, always compare the pattern with a reference and check if the finder pattern has been registered correctly.

1. Select the pattern number of the pattern that you want to refer to on the **Pattern list** screen.

Up/Down/Left/Right Keys: To move among pattern numbers.

The selected pattern number is indicated with a solid-line frame.

```
Pattern list

Pattern:0 Matrix size:20x20
Color:BLK R&L rev. :OFF Corr. :60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **ENT** Key.

▼
The Pattern settings selections will be displayed.

3. Select **Reference pattern**.

```
Pattern registration
Code settings
Reference pattern
Search region
```

▼
The **Reference pattern** screen will be displayed.
Detailed information about the pattern will be displayed at the bottom of the screen.

📖 For information on detailed information about patterns, refer to page 106.

🔅 In order to improve the accuracy of detection of the finder pattern, a part of the timing
CHECK! pattern is also registered for the pattern.

```
Reference pattern

Pattern:0 Matrix size:20x20
Color:BLK R&L rev. :OFF Corr. :60
Priority:01  Applied rate:000%
ENT:End
```

4. Press the **ESC** Key to leave this screen.
▼
The screen in **3.** will return.

■ Search Region

Specify the range within which the pattern search is to be conducted.

1. Select the pattern number of the pattern that you want to set on the **Pattern list screen**.

**Up/Down/Left/Right** Keys: To move among pattern numbers.

The selected pattern number is indicated with a solid-line frame.

```
Pattern list
┌───┬───┬───┬───┬───┐
│▓▓ │ ▓ │   │   │   │
├───┼───┼───┼───┼───┤
│   │   │   │   │   │
└───┴───┴───┴───┴───┘
Pattern:0 Matrix size:20×20
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **ENT** Key.

▼

The Pattern settings selections will be displayed.

3. Select **Search region**.

```
Pattern registration
Code settings
Reference pattern
Search region
```

▼

The Search region setting screen will be displayed.

4. The search region is depicted as a rectangle.

Up/Down/Left/Right Keys: To move the cursor.
ENT Key   : To confirm.

```
0.Scn 0═SET ═1.Read DataMatrix
Search region            25, 28
                       Freeze(21)
```

▼

When you set the bottom right coordinates the search region is confirmed and the screen in **3.** will return.

Reading Settings

Set the conditions for executing DataMatrix reading.
Select whether or not there are to be automatic sub-
stitutions in the pattern comparison order in accor-
dance with past frequencies. (OFF*, ON)

📖 Refer to page 113.

Set the timeout time for reading processing during
the reading of one image.
If "0" is set, the timeout time setting is invalid.
(0, 100 to 10000 ms, Default setting: 2000 ms)

```
Auto pattern select:   OFF▼
Timeout            :[ 2000]ms
Number of retries  :   0▼

       Register  Cancel
```

Select the number of retries to be made if the reading
is NG. (0* to 9)

The asterisk (*) indicates the default setting.

▼

1. Select **1. Read DataMatrix**.

```
0.Scn 0═SET ═

 0.Image Adjust
 1.Read DataMatrix

Select the Reading Settings.
S+ESC:Switch over to QRCode
```

▼
The initial screen for the DataMatrix reading will be
displayed.

2. Select **Reading settings.**

```
Pattern settings
Reading settings
Display settings
TrendMon settings
```

▼
The setting items for reading condition setting will be
displayed.
3. Make the settings for each item.

4. Select **Register**.

```
Auto pattern select:   OFF▼
Timeout            :[ 2000]ms
Number of retries  :   0▼

    Register  Cancel
```

▼

The setting will be registered and the screen in **2.** will return.

SECTION 5 Setting Reading Conditions (DataMatrix)

■ Auto Pattern Select

If multiple patterns are registered, the controller references the patterns in sequence starting from pattern 0, and checks them by comparison against the read code.

If ON is set for this function, the controller first references the pattern used immediately before, then references the rest in order of diminishing frequency of use.

Auto pattern
select: OFF

Pattern 0   Pattern 1   Pattern 2   Pattern 3   Pattern 4

Referenced in the order Pattern 0→Pattern 1→Pattern 2...
(Priority 01) (Priority 02) (Priority 03)

Auto pattern
select: ON

Pattern 0   Pattern 1   Pattern 2   Pattern 3   Pattern 4

Pattern frequency → 2 times   10 times   5 times   Pattern used immediately before for reading   0 times
of use

Referenced in the order Pattern 3→Pattern 1→Pattern 2 → Pattern 0...
(Priority 01) (Priority 02) (Priority 03) (Priority 04)

CHECK!
The order of priority of the patterns can be confirmed on the Pattern list screen.

Refer to pages 106 and 135.

CHECK!
When the first reading starts (when the pattern frequency of use is 0), the controller starts referencing from pattern 0.
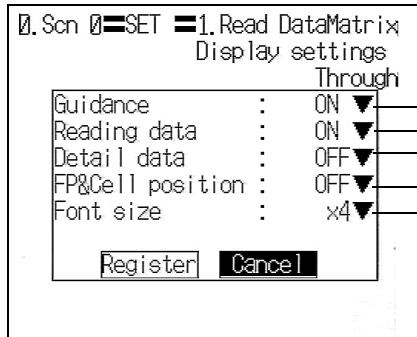

When a registered pattern is deleted, the frequency of use of the relevant pattern is cleared.

Note also that if the controller power is switched OFF without saving the setting data, the pattern frequency of use information is cleared. If the setting data has been saved, the frequency of use information is retained.

Display Settings

Set the contents displayed in **MON** (monitor) mode and **RUN** mode.

If you increase the number of monitor display items, processing time increases proportionately.

```
0.Scn 0━SET ━1.Read DataMatrix
        Display settings
                   Through
Guidance      :   ON ▼
Reading data  :   ON ▼
Detail data   :  OFF▼
FP&Cell position : OFF▼
Font size     :   ×4▼

    Register   Cancel
```

Set whether or not guidance is displayed at the bottom of the screen. (ON*, OFF)

Refer to page 116.

Specifies whether or not to display reading data on the screen. (ON*, OFF)

Refer to page 116.

Specifies whether or not to display the code's detailed data on the screen. (ON*, OFF)

Refer to page 116.

Set whether or not the position of the finder pattern and cell erroneous recognition positions are to be displayed. (ON*, OFF)

Refer to page 118.

Specifies the font size that will be used when reading data is displayed on the screen.

(Standard, × 4 *)

The asterisk (*) indicates the default setting.

1. Select **1. Read DataMatrix.**

```
0.Scn 0━SET ━

  0.Image Adjust
  1.Read DataMatrix

Select the Reading Settings.
S+ESC:Switch over to QRCode
```

▼
The initial screen for the DataMatrix reading will be displayed.

2. Select **Display settings**.

```
Pattern settings
Reading settings
Display settings
TrendMon settings
```

▼
The display setting items will be displayed.

3. Make the settings for each item.

4. Select **Register**.

```

Font size       :    ×4 ▼
      Register  Cancel
```

▼
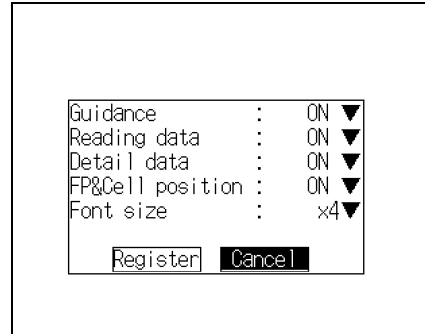

The setting will be registered and the screen in **2.** will return.

■ Guidance

Displays explanations of the selected items and instructions on subsequent operations.

Guidance
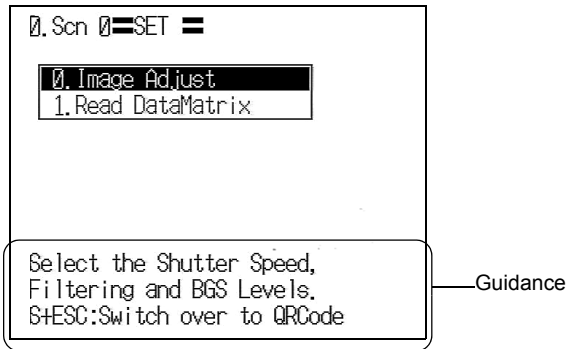

■ Reading Data

The read data is displayed. If the reading result is NG, the error code is displayed.

Reading data

■ Detail Data

The settings, number of pixels (cell size), etc., for the read code are displayed. The data displayed differs according to the type of code.

Detail data

■ DataMatrix

| Item	Description
Set: Pattern No.	Displays the pattern number currently being used.
Set: Symbol color	Displays the Symbol color setting.
Set: R&L reverse	Displays the Right & Left reverse setting.
Set: Matrix size	Displays the Matrix size setting.
Set: ECC level	Displays the ECC level automatically recognized from the matrix size.
Set: Range of angle	Displays the reading angle setting.
Set: Correlation	Displays the correlation value.
Set: Timeout	Displays the Timeout time setting.
Set: Number of retries	Displays the Number of retries setting.
Size of Cell	Displays the pixel/cell contents read from the code.
Error Correction	Displays the number of error corrections on reading.
Pattern No.	Displays the registered pattern numbers. If the reading result is OK, the used pattern number is displayed enclosed in a box. If the reading result is NG, the used pattern number is highlighted.

■ QRCode

Item	Description
Set: Pattern No.	Displays the pattern number currently being used.
Set: Symbol color	Displays the Symbol color setting.
Set: R&L reverse	Displays the Right & Left reverse setting.
Set: Version	Displays the Version setting.
Set: Range of angle	Displays the reading angle setting.
Set: Correlation	Displays the correlation value.
Set: Timeout	Displays the Timeout time setting.
Set: Number of retries	Displays the Number of retries setting.
Size of Cell	Displays the pixel/cell contents read from the code.
Error Corrections	Displays the number of error corrections on reading.
Pattern No.	Displays the registered pattern numbers. If the reading result is OK, the used pattern number is displayed enclosed in a box. If the reading result is NG, the used pattern number is highlighted.

SECTION 5   Setting Reading Conditions (DataMatrix)

■ FP & Cell Position

A cross-hair cursor is displayed at the position of the finder pattern (FP) and positions recognized as cells.
If a color monitor is used, cell recognition positions are indicated as shown below:
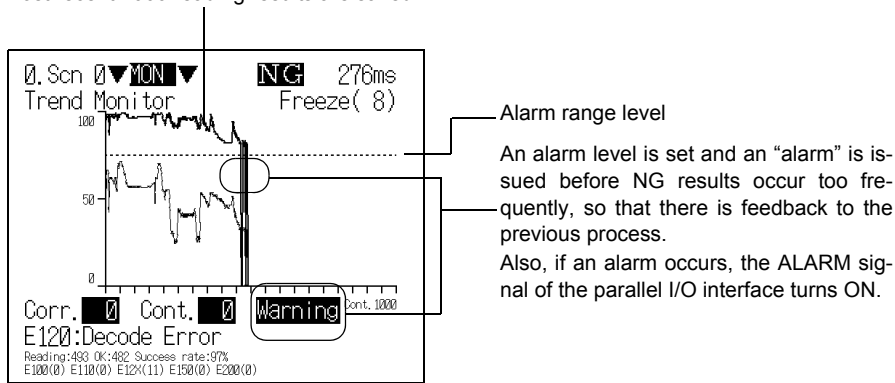

CHECK!
• Black cell portion • • • Green
• White cell portion • • • Red
Trend Monitor Settings

The transition over time of the "pattern correlation value" and contrast between the "code and background" can be represented in graph form for each scene (maximum of 1000 scenes). Changes in the shape of the code and the trend in changes in the lighting status can be checked by monitoring. This helps prevent multiple occurrences of defective items, and analyze the cause when NG results occur.

The changes in correlation value and contrast over time
are displayed in graph form.
The most recent 1000 reading results are saved.

Alarm range level

An alarm level is set and an "alarm" is is-
sued before NG results occur too fre-
quently, so that there is feedback to the
previous process.
Also, if an alarm occurs, the ALARM sig-
nal of the parallel I/O interface turns ON.

· **Corr.** (Correlation)

Pattern 0

Freeze 0   Freeze 1   Freeze 2

Correlation: 96   53   26

· **Cont.** (Contrast)

Pattern 0

Freeze 0   Freeze 1   Freeze 2

This value is displayed in a graph.

Contrast: 67   43   21
■ Select the Object whose Data is to be Displayed by the Trend Monitor (Object of Monitoring)

Sets the data displayed on the trend monitor when reading is executed.

Select whether or not the reading history is displayed when reading is executed. (OFF*, ON)

Refer to page 124.

```
0.Scn 0≡SET ≡1.Read DataMatrix
        Object of monitoring

Success rate  :   ON▼
Correlation   :   ON▼
-Warning level : [ 60]
Contrast      :   ON▼
-Warning level : [ 65]
            End
```

Select whether or not the correlation value between the read code and the pattern is displayed. This allows you to detect changes in the status of the code. (OFF*, ON)

Set the alarm range for the correlation value. If the correlation value is less than or no higher than the value set, the **Warning** indication on the screen is highlighted. (0 to 100; Default setting: 60) (See note 1.)

Select whether or not the status of the contrast between the read code and its background is displayed. If the contrast is low, reading is not reliable. Adjust the lighting and the reading conditions. (OFF*, ON)

Set the alarm range for contrast. If the contrast is less than or no higher than this value, the **Warning** indication on the screen is highlighted. (0 to 100; Default setting: 0) (See note 1.)

The asterisk (*) indicates the default setting.

Note 1:
If the value is less than or no higher than the value set for the alarm range level, the measured value, and **Warning** on the screen, are highlighted.

```
0.Scn 0▼MON ▼      NG  276ms

| Item	Description
1. Reading data	The most recent reading data is displayed.
2. Total reads	The number of reading executions is displayed.
3. OK reads	The number of OK reads within the number of executed reads is displayed.
4. Read accuracy	The percentage of OK reads within the number of executed reads is displayed.
5. Number of error codes	The types and number of occurrences of error codes associated with NG reads are displayed.

■ Referring to NG Reading Results (Warning Transition)

The measured values and time of occurrence for up to 1000 events within the trend monitor reading results where an alarm or reading NG result has occurred can be referred to.

This function enables you to determine the time frames in which NG reading results have occurred, and helps analyze the causes of NG results.

An indication of how many occurrences ago the result occurred is displayed.

It is also indicated whether the result was **Warning** or **NG**.

An indication of the graph indicates how many occurrences ago the relevant NG result occurred.

The measured value and time of occurrence are displayed.

**1.** Select **TrendMon settings/Warning transition**.

▼

A graph is displayed.

2. Change the displayed NG result using **Left**/**Right** Keys.
Left Key : To display the previous result
Right Key : To display the next result

3. Press the **ESC** Key.

▼

The screen in **1.** will return.

SECTION 5 Setting Reading Conditions (DataMatrix)
■ Saving Reading Data (Store Data to MemCard)

The reading results recorded in the trend monitor can be saved in a Memory Card. Since the data is saved in CSV format, it can be edited on a PC.

Data to be saved include statistical data, the read data and times of occurrence when alarms and NG results occurred (up to 1000 events), and the reading results on the graph (up to 1000 results).
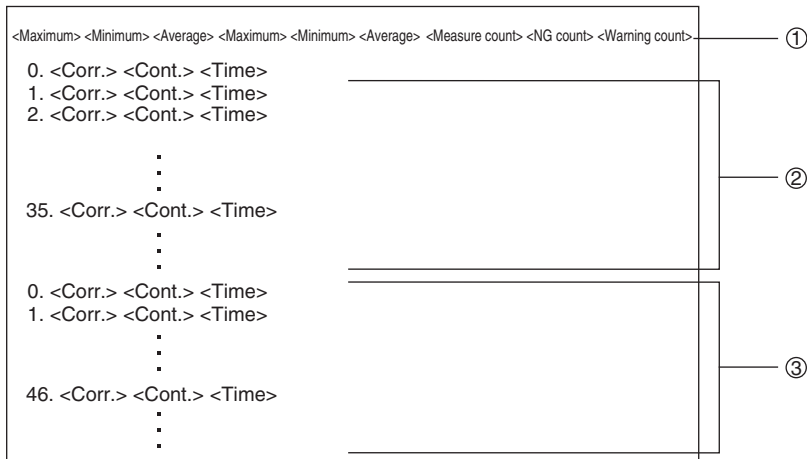

CHECK!

When **Store data to MemCard** is turned ON, a directory designated **TRENDMON** is automatically created in the root directory of the Memory Card, and the data is saved under this directory.

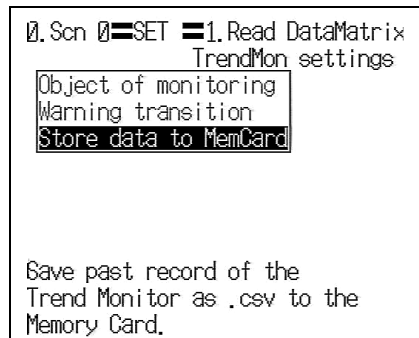

```

The screen in **3.** will return.

6. Select **Execute**.

```
0.Scn 0═SET ═1.Read DataMatrix

File : [ABC00000].CSV
        Execute  Cancel
```
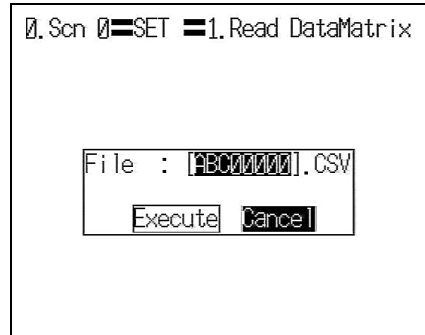

▼
The data is saved under the **TRENDMON** directory, and the screen in **1.** will return.

Setting Reading Conditions (QRCode)

Set the reading conditions in accordance with the reading object.
The explanation here deals with the settings for QRCode.

Pattern Settings

A finder pattern image is registered in advance, then when reading is executed a search is conducted for an image pattern similar to the input image in order to locate the code.

? What is a pattern search? Refer to page 285 (Sec.10).

◄── Finder Pattern
Register as a pattern.

```
0.Scn 0═SET ═1.Read QRCode
Search region         492,423
                       Through
```

Search

Search region
(Under normal conditions, draw the whole screen.)

The higher correlation value (similarity) within the search region is detected as a finder pattern.
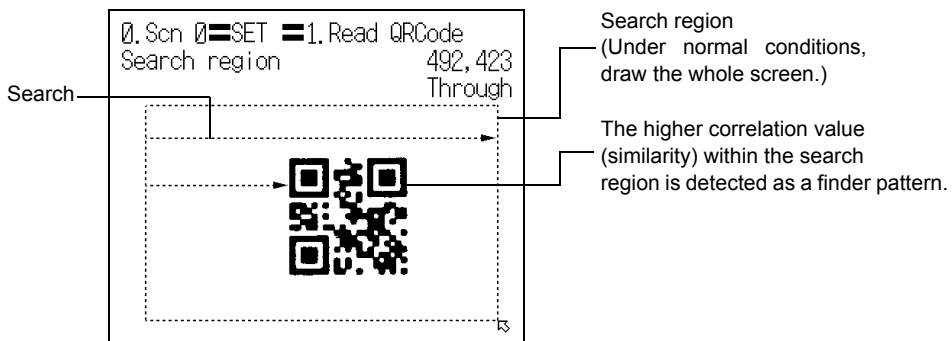

■ Pattern Registration

The finder pattern image is registered as a pattern. Use the teaching function for registration. Using the teaching function, a reading image is obtained, measurement is performed on this image, and based on the results of this measurement, parameters for reading conditions (symbol color, Right & Left reverse) are automatically determined. The teaching results can be checked or changed in **Code settings**.

What is Black & White Reverse? Refer to page 284 (Sec.10).

What is Right & Left Reverse? Refer to page 284 (Sec.10).

When registering patterns, be sure to carry out reading by trigger input and complete teaching for each pattern registration. You cannot register patterns consecutively without performing teaching CHECK! processing.

Up to 10 patterns can be registered for one scene, and **Code settings** and **Search region** are set for each of these patterns. Registering multiple patterns enables reliable reading even if there is dispersion in the dot spacing and printing quality. In addition, if codes with different versions and symbol colors are registered as patterns, multiple codes can be read in one scene. This makes scene changes unnecessary.
.

Up to 10 patterns can be registered.
Pattern 0   Pattern 1   Pattern 2   Pattern 3   Pattern 4

Multiple pattern registrations for a single code with dispersion, or pattern registration of codes with different versions or symbol colors

Pattern 5   Pattern 6   Pattern 7   Pattern 8   Pattern 9

DataMatrix and QRCode cannot be mixed in pattern registrations.

CHECK!

1. Select **1.Read QRCode**.

CHECK!

To change the code to be read, press the
SHIFT + **ESC** Keys.

```
0.Scn 0▬SET ▬

  0.Image Adjust
  1.Read QRCode

      [QR Code]

Select the Reading Settings.
S+ESC:Switch over to DataMatrix

```
CHECK! If reading is performed successfully, the teaching function will automatically turn OFF. If reading is not performed correctly (NG), the teaching function will stay ON. To turn the teaching function OFF, go to the screen in **3.** (pattern list screen). To redo pattern registration, enter **SET** mode and start the procedure again from **5.**.

The following setting information for pattern registration is displayed on the **Pattern list** screen.

```
Pattern list

Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

— Pattern setting information

Item	Description
Pattern	Selected pattern number
Version	Matrix size (Version)
Color	Symbol color of the pattern
R&L rev.	Execution/non-execution of pattern Right & Left reverse
Corr. (Correlation)	Pattern correlation value
Priority	Pattern sequence used when reading Refer to page 113.
Applied rate	Applied rate of the pattern $$\text{Applied rate} = \frac{\text{Number of times a pattern is used}}{\text{Total reads*}}$$ * The maximum number of reads is the most recent 10000.

CHECK! To register a pattern again or register a new pattern, select the pattern number and press **ENT** Key, and repeat the procedure from step **5.**.
Refer to page 131.

▪ To delete a pattern

1. Select the pattern number of the pattern that you want to delete from the **Pattern list** screen.

Up/Down/Left/Right Keys: To move among pattern numbers.
The selected pattern number is indicated with a solid-line frame.

```
Pattern list
┌────┬────┬────┬────┬────┐
│ ▓▓ │ ▓▓ │    │    │    │
│ ▓▓ │ ▓▓ │    │    │    │
├────┼────┼────┼────┼────┤
│    │    │    │    │    │
│    │    │    │    │    │
└────┴────┴────┴────┴────┘
Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **SHIFT** + **ESC** Keys.

▼
The confirmation message will be displayed.

3. Select **Execute**.

```
Delete Pattern ?

Execute  Cancel
```
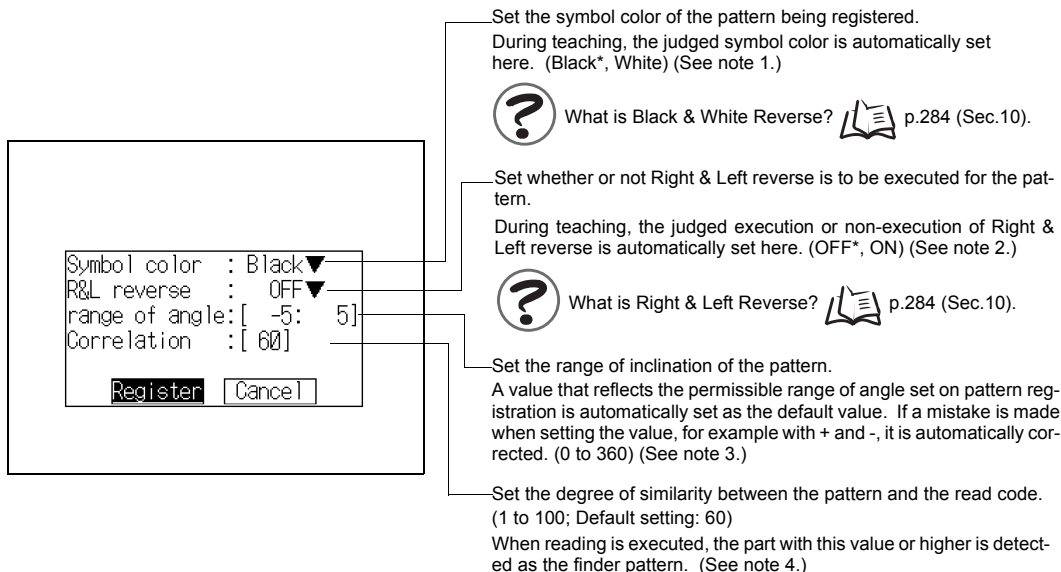

▼
The pattern is deleted, and the screen in **1.** will return.

■ Code Settings

Set the conditions to apply in pattern searches.

Set the symbol color of the pattern being registered.
During teaching, the judged symbol color is automatically set here. (Black*, White) (See note 1.)

 What is Black & White Reverse? p.284 (Sec.10).

Set whether or not Right & Left reverse is to be executed for the pattern.

During teaching, the judged execution or non-execution of Right & Left reverse is automatically set here. (OFF*, ON) (See note 2.)

 What is Right & Left Reverse? p.284 (Sec.10).

```
Symbol color : Black▼
R&L reverse  :  OFF▼
range of angle:[ -5:   5]
Correlation  :[ 60]

     Register  Cancel
```

Set the range of inclination of the pattern.
A value that reflects the permissible range of angle set on pattern registration is automatically set as the default value. If a mistake is made when setting the value, for example with + and -, it is automatically corrected. (0 to 360) (See note 3.)

Set the degree of similarity between the pattern and the read code.
(1 to 100; Default setting: 60)
When reading is executed, the part with this value or higher is detected as the finder pattern. (See note 4.)

The asterisk (*) indicates the default setting.

Note 1: Symbol color

 Black:
When black is printed on a white background

 White:
When white is printed on a black background

Note 2: R&L reverse

 OFF:
When reading is done from the front
Front face
(reading face)

Rear face
(reading face)

 ON:
When a transparent object such as one of glass is read, or a rear view of an object reflected in a mirror
Front face

Note 3: Range of angle

Example: When the permissible range of angle is ±30°

Reading is possible within the ranges of angle of $0° \pm 30$, $90° \pm 30$, $180° \pm 30$, $270° \pm 30$.

For 0°± 30:

30°   0°   -30°

Note 4: Correlation

Example: When the correlation value is **60**

Pattern 0	Freeze 0	Freeze 1	Freeze 2
	Correlation: 96 Judgement: OK	Correlation: 53 Judgement: NG	Correlation: 26 Judgement: NG

1. Select the pattern number that you want to set
on the **Pattern list** screen.

**Up/Down/Left/Right** Keys: To move among pat-
tern numbers.

The selected pattern number is indicated with a
solid-line frame.

2. Press the **ENT** Key.

```
Pattern list
┌──┬──┬──┬──┬──┐
│▓▓│▓ │  │  │  │
├──┼──┼──┼──┼──┤
│  │  │  │  │  │
└──┴──┴──┴──┴──┘
Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

▼

The Pattern settings selections will be displayed.

3. Select **Code settings**.

```
Pattern registration
Code settings
Reference pattern
Search region
```

▼

The setting items will be displayed.

4. Make the settings for each item.

5. Select **Register**.

```
Symbol color : Black▼
R&L reverse  :  OFF▼
range of angle:[ -5:  5]
Correlation  :[ 60]

    Register  Cancel
```

▼

The setting will be registered and the screen in **3.** will return.

SECTION 5 Setting Reading Conditions (QRCode)
■ Reference Pattern

The registered pattern is displayed on the monitor screen and can be checked. After performing pattern registration, always compare the pattern with a reference and check if the finder pattern has been registered correctly.

1. Select the pattern number of the pattern that you want to refer to on the **Pattern list** screen.

**Up/Down/Left/Right** Keys: To move among pattern numbers.

The selected pattern number is indicated with a solid-line frame.

2. Press the **ENT** Key.

```
Pattern list

Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

▼

The Pattern settings selections will be displayed.

3. Select **Reference pattern**.

```
Pattern registration
Code settings
Reference pattern
Search region
```
▼

The Reference pattern screen will be displayed.
Detailed information about the pattern will be displayed at the bottom of the screen.

📖 For information on detailed information about patterns, refer to page 135.

4. Press the **ESC** Key to leave this screen.

```
Reference pattern

Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:050%
ENT:End
```

▼

The screen in **3.** will return.

SECTION 5 Setting Reading Conditions (QRCode)

■ Search Region

Specify the range within which the pattern search is to be conducted.

1. Select the pattern number of the pattern that you want to set on the **Pattern list** screen.

Up/Down/Left/Right Keys: To move among pattern numbers.

The selected pattern number is indicated with a solid-line frame.

```
Pattern list
┌─────┬─────┬─────┬─────┐
│ ▓   │ ▓   │     │     │
├─────┼─────┼─────┼─────┤
│     │     │     │     │
├─────┴─────┴─────┴─────┤
Pattern:0 Version:1
Color:BLK R&L rev.:OFF Corr.:60
Priority:01  Applied rate:000%
ENT:Select ESC:End S+ESC:Del
```

2. Press the **ENT** Key.

▼

The Pattern settings selections will be displayed.

3. Select **Search region**.

```
Pattern registration
Code settings
Reference pattern
Search region
```
▼

The Search region setting screen will be displayed.

4. The search region is depicted as a rectangle.

Up/Down/Left/Right Keys : To move the cursor.
ENT Key   : To confirm.

```
0.Scn 0═SET ═1.Read QRCode
Search region          492,423
                         Through
```

▼

When you set the bottom right coordinates the search region is confirmed and the screen in **3.** will return.

Reading Settings

Set the conditions for reading QRCode.

Set whether the controller automatically selects a pattern when reading is executed, the timeout time for reading, and the number of retries executed in the event of an NG reading result.

The details of the setting method are the same as those described for **Read DataMatrix**.

Refer to page 112.

Display Settings

Set the contents displayed in **MON** (monitor) mode and **RUN** mode.

Select whether or not the guidance displayed at the bottom of the monitor screen is displayed, and whether or not reading data is displayed.

If you increase the number of monitor display items, processing time increases proportionately.

The details of the setting method are the same as those described for **Read DataMatrix**.

Refer to page 114.

Trend Monitor Settings

Up to 1000 events showing the transition over time of the "pattern correlation value" or "contrast between the code and background" can be displayed in graph form. Changes in the shape of the code and the trend in changes in the lighting status can be checked by monitoring. This helps prevent multiple occurrences of defective items, and the analyze the cause when NG results occur.

The details of the setting method are the same as those described for **Read DataMatrix**.

Refer to page 119.

SECTION 5 Setting Reading Conditions (QRCode)

MEMO

SECTION 6
Other Functions

This section describes additional functions such as changing scenes or backing up data.

Changing Scenes (Scene Function)

When two cameras are used, when the shutter speed differs according to the read code, or when the type of the read code (DataMatrix/QRCode) differs, use the scene function.

The different situations in which readings are performed are called "scenes" and the reading conditions set in **SET** Mode are called "scene data." The scene function can be used to set 10 types of reading conditions. If reading conditions change, simply switch to change to a different reading scene.

The normal limit of 10 scenes may not be possible for some settings if there is insufficient memory.

A message will appear on the screen if there is insufficient memory. Delete unnecessary patterns.

Setting Reading Conditions for Different Codes (Changing Scenes)

Use the scene changing function to switch between different reading conditions for different reading conditions or reading object. The V530-R160 is factory set to start up in scene 0. In addition to this, however, there are other scenes, scenes 1 to 9.

The command for changing scenes can be input from a host device via a parallel I/O or serial interface.
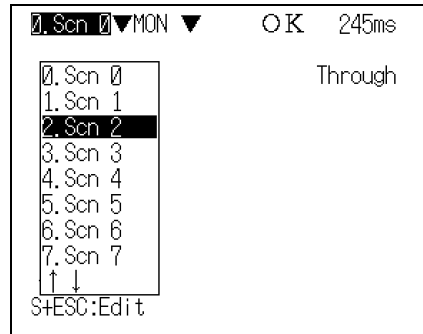

1. The **MON** (monitor) mode or **RUN** mode screen will be displayed.

2. Move the cursor to **Scn** and press the **ENT** Key.

```
1.Scn 1▼MON ▼     OK   245ms
                      Freeze( 0)
```

▼
The **Scn 0** to **Scn 7** options will be displayed.

Down Key: To display scene numbers 8 to 10.

**3.** Move the cursor to the scene number to be switched to and press the **ENT** Key.

```
0.Scn 0▼MON ▼      OK   245ms

0.Scn 0                      Through
1.Scn 1
2.Scn 2
3.Scn 3
4.Scn 4
5.Scn 5
6.Scn 6
7.Scn 7
 ↑ ↓
S+ESC:Edit
```

▼
The selected scene will be displayed.

```
2.Scn 2▼MON ▼      OK   245ms

                          Freeze( 0)
```

Copying Reading Conditions

This function is useful for creating new scenes by copying scene data from another scene and changing some settings to suit the new requirements.

1. Move the cursor to **Scn** and press the **ENT** Key.

**2.** Move the cursor to the desired scene number.

3. Press the **SHIFT** + **ESC** Keys.

```
2.Scn 2▼MON ▼        OK   245ms

 0.Scn 0                 Freeze( 0)
 1.Scn 1
 2.Scn 2
 3.Scn 3
 4.Scn 4
 5.Scn 5
 6.Scn 6
 7.Scn 7
 ↑ ↓
S+ESC:Edit
```

▼

The Copy/Clear/Comment selections will be displayed.

4. Select **Copy**.

```
Copy
Clear
Comment
```

▼

The screen for copying will be displayed

5. Set the original scene number and select **Execute**.

```
Original scene : 0.Scn 0    ▼
              Execute  Cancel
```
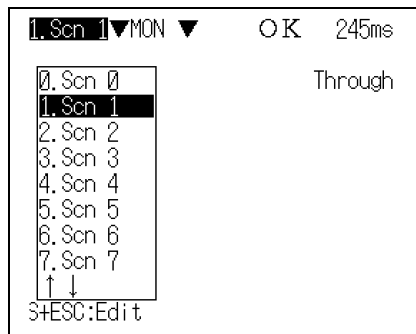

▼
The scene will be copied.

Initializing Reading Conditions (Clearing Scenes)

Use the following procedure to clear reading conditions set in scenes. This section explains the procedure performed separately for each scene.

1. Move the cursor to **Scn** and press the **ENT** Key.

2. Move the cursor to the number of the scene to be cleared.
3. Press the **SHIFT** + **ESC** Keys.

```
1.Scn 1▼MON ▼      OK    245ms
0.Scn 0                    Through
1.Scn 1
2.Scn 2
3.Scn 3
4.Scn 4
5.Scn 5
6.Scn 6
7.Scn 7
 ↑ ↓
S+ESC:Edit
```

▼

The Copy/Clear/Comment selections will be displayed.

4. Select **Clear**.

```
Copy
Clear
Comment
```

▼

The confirmation message will be displayed.

5. Select **Execute**.

```
This scene data
will be cleared.

Execute  Cancel
```
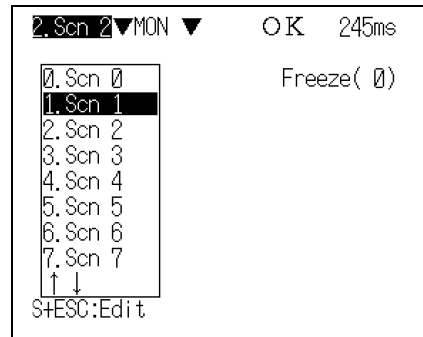

▼

The scene will be cleared.

SECTION 6 Changing Scenes (Scene Function)

Adding Comments to Scenes

Any comment can be added to each scene. This is useful for understanding settings when many regions have been registered.

1. Move the cursor to **Scn** and press the **ENT** Key.

2. Move the cursor to the number of the scene for the name change.

3. Press the **SHIFT** + **ESC** Keys.
```
2.Scn 2▼MON ▼      OK   245ms
┌─────────┐

│Clear   │
│Comment │
└────────┘
```

▼

The software keyboard will be displayed.

5. Set a comment with up to 8 characters.

6. Move the cursor to **END** and press the **ENT** Key.

```
Input comment(Scn 1)
[QR      ]

A B C D E F G H I J K L M N
O P Q R S T U V W X Y Z
a b c d e f g h i j k l m n
o p q r s t u v w x y z
0 1 2 3 4 5 6 7 8 9 . - _ !
# $ % ' ( ) ^ `
SPC DEL BS  INS ←  →  END

ENT:Select            Ins.
```

▼

The scene name will be changed.

Backing Up Data

This section explains how to make backup copies of data to flash memory or a computer.

When the power to the V530-R160 is turned OFF, all data settings are cleared. The V530-R160 loads data saved to flash memory at startup. Therefore, when settings have been changed, be sure to save to flash memory before turning the power OFF.

The 4 types of system and scene data listed below can be backed up on a computer or Memory Card. This is a useful function for setting other devices with the same data. Backing up the setting data is recommended as a precaution against loss due to data damage or device malfunctions.

Data	Contents
System data	Backs up settings under **SYS** to a personal computer or Memory Card.
Scene data	Backs up settings under **SET** for each scene to a personal computer or Memory Card.
System data + Scene data	Backs up both the system data and all scene data to a personal computer or Memory Card.
Image data	Backs up saved read images in BMP format to a personal computer or Memory Card. The images can be displayed on most personal computers as BMP is a standard image format for Windows. The saved images can be batch saved to the root directory in the Memory Card. The file names they are saved under are automatically appended with the figures 00 to 35 corresponding to the memory numbers of the controller. (00.bmp to 35.bmp) The image data in the root directory of the Memory Card (00.bmp to 35.bmp) can also be batch loaded to the controller. Set file names for the data to be loaded from 00.bmp to 35.bmp corresponding to the memory numbers.

NOTICE Never input the RESET signal or turn OFF the power while saving or loading. Data may be lost, and the V530-R160 may not operate properly the next time it is started.

SECTION 6 Backing Up Data
Backing Up to Flash Memory

The scene data and system data will be saved to the V530-R160 internal flash memory.

CHECK! Flash memory data or Memory Card data is loaded each time the V530-R160 is started up. Therefore, when settings have been changed, be sure to save to flash memory before turning the power OFF. Any new data will be lost if it is not saved to flash memory.
1. The **MON** (monitor) mode or **RUN** mode screen will be displayed.

2. Move the cursor to **MON** or **RUN** and press the **ENT** Key.

```
1.Scn 1▼MON ▼     OK   245ms
                       Freeze( 0)
```

▼
The mode selections will be displayed.

3. Select **SAVE**.

```
1.Scn 1▼MON ▼     OK   245ms
       SET
       MON
       RUN              Through
       SYS
       TOOL
       SAVE
```

▼
The confirmation message will be displayed.

4. Select **Execute**.

```
Setting data will be saved.
   Execute  Cancel
```
CHECK! Never input the RESET signal or turn OFF the power when processing messages are displayed. Data may be lost, and the V530-R160 may not operate properly the next time it is started.

▼
When saving has been completed, the screen in **1.** will return.

Backing Up Data to a Computer

This section describes data transfer using the Hyper Terminal provided on Windows 98, Windows 2000 and Windows NT4.0 computers.

In this example, an RS-232C cable is connected to the COM1 port of the computer.

Alter the example to suit your communications software or COM port number. If using different communications software, refer to the relevant manual.

The data transfer is performed with XMODEM (-CRC or SUM) or ZMODEM protocol. The XMODEM (-1K) protocol is not supported.

■ Saving Data

Controller   Personal computer
1. Connect the COM1 port on the computer and the V530-R160 using an RS-232C cable.

2. Make the V530-R160 communications settings (serial).

The default communication settings are as shown in the following table. These settings can be normally used.

Item	Setting
Communications protocol	RS-232C
Baud rate	38400 (bps)
Data length	8 (bit)
Parity bits	None
Stop bits	1 (bit)
Protocol	XMODEM*

p.206 (Sec. 8).

* Both XMODEM and ZMODEM transfer protocols are supported. Use the protocol that matches the computer settings.

3. Start the Hyper Terminal program on the computer and make the following communication settings.

The same communication settings must be used on both the V530-R160 and the modem on the computer.

Item	Setting
Baud rate	38400 (bps)
Data bits	8 (bit)
Parity bits	None
Stop bits	1 (bit)
Flow control	None*

* XMODEM or ZMODEM protocol is used, so flow control is not performed.
SECTION 6 Backing Up Data

4. Once the computer preparations have been completed, display the **MON** (monitor) mode or **RUN** mode screen.

**5.** Move the cursor to **MON** or **RUN** and press the **ENT** Key.

```
1.Scn 1▼ MON ▼      OK   245ms

                   Freeze( 0)
```

▼

The mode selections will be displayed.

6. Select **TOOL**.

```
0.Scn 0▼ MON ▼      ----   ---ms
        SET
        MON         Freeze( 0)
        RUN
        SYS
        TOOL
        SAVE
```

▼
The data selections will be displayed.

7. Select the kind of data to be saved.

```
TOOL

 System data
 Scene data
 System + Scene
 Image data

 I/O monitor

Load or Save the selected data.
```

▼

The destination selections for load and save will be displayed.

8. Select **Save (Serial)**.

```
Load(Serial)
Save(Serial)
Load(Memory card)
Save(Memory card)
```

▼
9. If scene data or image data is being trans-
ferred, select the desired scene number or
memory number.

When using ZMODEM for communications,
set a file name of 8 characters or less after
inputting the desired number.

```
0.Scn 0      Memory 0
1.Scn 1      Memory 1
2.Scn 2      Memory 2
3.Scn 3      Memory 3
4.Scn 4      Memory 4
5.Scn 5      Memory 5
6.Scn 6      Memory 6
7.Scn 7      Memory 7
↑ ↓          ↑ ↓
```
Scene No.   Image data No.

▼
The confirmation message will be displayed.

Example: Confirmation message when
saving system data.

10. Select **Execute**.

```
Data will be saved.
    System data

Execute  Cancel
```

▼
A screen showing the transfer progress will be dis-
played.

```
System data Save

Saving data. [          ]
```

▼

11. Select **Transfer/Receive File** from the computer's Hyper Terminal menu.

12. Specify a destination directory where the file will be saved.

13. Use **XMODEM** or **ZMODEM** protocol.

14. Select **Receive**. When using **XMODEM**, input a file name.
The data will be transferred from the computer to the V530-R160.

▼

When transfer has been completed, the screen in **8.** will return.

■ Loading Data

Controller   Personal computer
1. Follow the procedure **1.** to **3.** for *Saving Data* to connect the V530-R160 and the computer.
      Refer to page 152.

2. Select **Transfer/Receive File** from the computer's Hyper Terminal menu.

3. Select the file to be loaded.

4. Use **XMODEM** or **ZMODEM** protocol.
5. Select **Send**.

▼

The data transfer screen will be displayed.

6. Once the computer preparations have been completed, display the **MON** (monitor) mode or **RUN** mode screen.

**7.** Move the cursor to **MON** or **RUN** and press the **ENT** Key.

```
1.Scn 1▼MON ▼     OK   245ms

                       Freeze( 0)
```

▼

SECTION 6 Backing Up Data

The confirmation message will be displayed.

Example: Screen for loading system data

5. Select **Execute**.

```
System data Load

      ┌─────────────────────┐
      │ Data will be loaded.│
      │      SYSDAT3.SYD     │
      │          ↓          │
      │      System data    │
      │                     │
      │   Execute   Cancel  │
      └─────────────────────┘
```
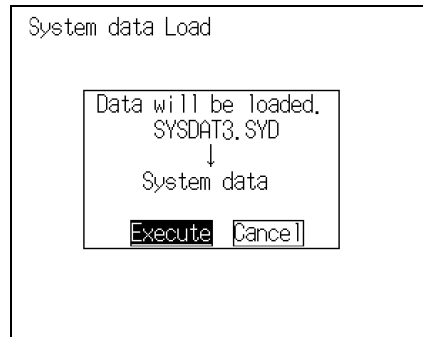

▼
When loading has been completed, the screen in **1.** will return.

If **Image data/Load 00-35 (Memory card)** is set, the image data in the root directory of the Memory Card (00.bmp to 35.bmp) can be batch loaded to the controller.

CHECK!

Memory Card Operations

The method for managing the files saved in the Memory Card, and the method for stopping the power supply to the Memory Card, are explained here.

NOTICE Turn OFF the power supply to the Memory Card before removing the Memory Card. If the power is not turned OFF before the Memory Card is removed, the Memory Card and the V530-R160 may be damaged.

📖 Refer to page 172.

CHECK! The **/C0** displayed on the screen while operations are in progress inside the Memory Card indicates the drive name of the Memory Card.

Creating Directories

Directories can be created in the Memory Card and files can be stored in those directories. It is easier to find files if separate directories are created for related files.

1. Insert the Memory Card.

2. The **MON** (monitor) mode or **RUN** mode screen will be displayed.

3. Move the cursor to **MON** or **RUN** and press the **ENT** Key.

```
1.Scn 1▼MON ▼      OK   245ms
                        Freeze( 0)
```

▼

The mode selections will be displayed.

4. Select **TOOL**.

```
0.Scn 0▼MON ▼      ----   ---ms
        SET
        MON         Freeze( 0)
        RUN
        SYS
        TOOL
        SAVE
```

▼
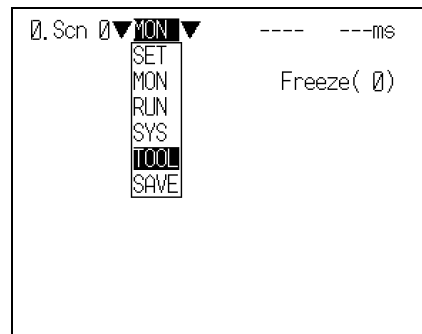

The TOOL mode selections will be displayed.

5. Select **Memory card**.

```
TOOL

 System data
 Scene data
 System + Scene
 Image data
 Memory card
 I/O monitor

Edit files.
```

▼
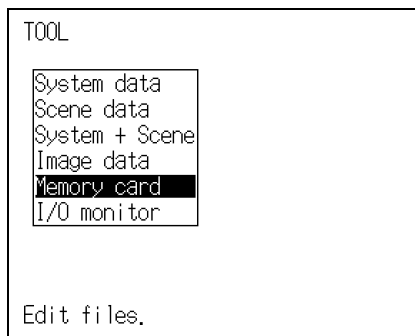

The Copy file/File operation/Drive status menu will
be displayed.

6. Select **File operation**.

```
Copy file
File operation
Drive status
```

▼

A list of files in the Memory Card root directory will
be displayed.

7. Press the **SHIFT** + **ESC** Keys.

```
File operation
 /C0
 [.            ]  02/07/31
 SYSDAT3   SYD  02/07/31

Select Camera,Monitor and
Intelligent Lighting.
```
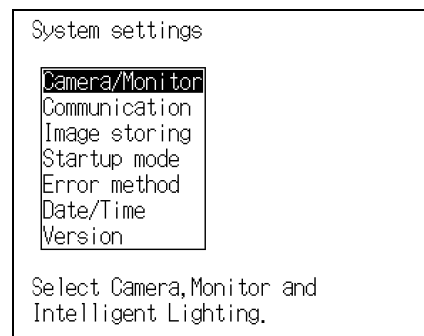

Settings Relating to the Camera and Monitor (Camera/Monitor)

Specify the model of the connected Camera and Intelligent Lighting (if using any).
If you have connected a color monitor, you can customize the display color.

Menu item	Details
Intelligent Lighting 0 Intelligent Lighting 1	If a Camera with Intelligent Lighting is connected, select the model of the Intelligent Lighting. Always set the DIP switch on the Intelligent Lighting to OFF, regardless of the Camera number. Refer to page 46 (Sec.2). (LTC20*, Out of use)
Monitor	Select the model of the connected monitor. (Color*, Monochrome)
Color (Character color) (BG color)	If you have connected a color monitor, you can select the color of the displayed characters and the background color for the characters. (White, black, green, blue*, yellow* ... on shipping from the factory, the background color is blue and the character color is yellow.)

The asterisks (*) indicate the default settings.

1. Go into **SYS** (system) mode and select **Camera/Monitor**.

Refer to page 180.

▼

The Camera/Monitor setting screen will be displayed.

2. If using Intelligent Lighting, select **LTC20**.

3. Select the monitor type to be connected.

4. If you have connected a color monitor, select **Character color** and **BG color**.

5. Select **End**.

```
Camera/Monitor

Intelli.Light.0  :Out of use▼
Intelli.Light.1  :Out of use▼
Monitor          :     Color▼
-Character color :      Blue▼
-BG color        :    Yellow▼
              End
```

▼
The setting will be registered and the System mode screen will return.

Selecting the Conditions for Image Storage (Image Storing)

A function for saving read images regardless of the selected scene is provided. You can determine the cause of a reading error from the saved image, then adjust the reading conditions and check the result by reading the same image again. Images can be automatically backed up in a Memory Card.

The read data currently displayed on the monitor can also be captured and saved in the Memory Card.

Menu item	Details
Storing condition	Select whether or not images read by the controller are saved. (OFF, Only NG*, All) Refer to page 183.
Store to MemCard	Select whether or not images specified by the Storage condition are automatically backed up in the Memory Card. (OFF*, ON) Refer to page 184.
Number of Images	Set the maximum volume of image data that can be backed up in the Memory Card. When this figure is exceeded, the storage count is cleared and the existing images are overwritten. (Range: 100* to 1000)
Capture display	Select whether or not the currently displayed content of the monitor screen is to be captured. (OFF*, ON) Refer to page 185.

The asterisk (*) indicates the default setting.

1. Go into **SYS** (system) mode and select **Image storing**.

Refer to page 180.

▼

The screen for setting the method of image storage will be displayed.

2. Make the settings for each item.

3. Select **End**.

```
Image storing

Storing condition :Only NG▼
Store to MemCard  :   OFF▼
-Number of Images :[ 100]
Capture display   :   OFF▼

          End
Turning the"Capture display" ON,
store the image with S+←→key.
```

▼
The setting will be registered and the System mode screen will return.

> The stored images are cleared when the power is turned OFF.
> The images must be backed up in the computer or in a Memory Card if you want to save them long
> CHECK! term.

Refer to page 149 (Sec.6).

■ Image Storage Conditions

The V530-R160 can save up to 35 read images (Same for all scenes). The condition for saving the images can be selected as "saved only when the reading judgement is NG" or "all images saved regardless of the reading judgement." When 35 images have been stored, new images will be stored by overwriting old images, starting with the oldest.
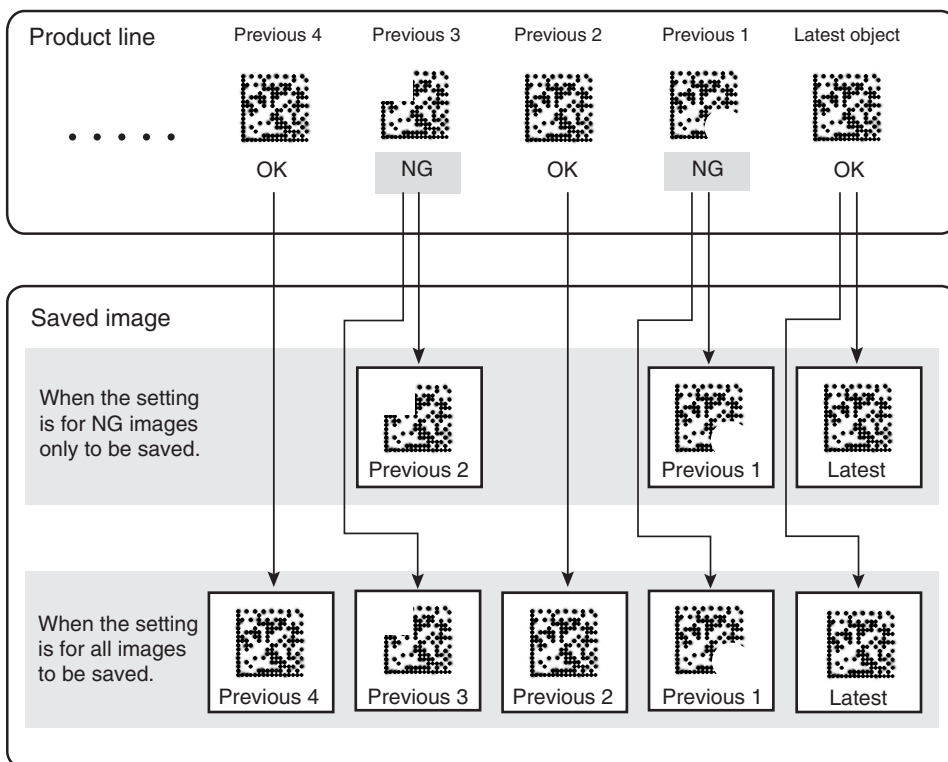

> Even if **Only NG** is set as the image storage condition, the latest read image is saved.
> CHECK!

> Reading can be repeated for stored images.
> Display the desired stored image using the **SHIFT** + **Up/Down** Keys and press the **SHIFT** + **TRIG**
> CHECK! Keys to execute reading.
> Reading can also be repeated for freeze images without re-inputting the image using the **SHIFT** + **TRIG** Keys. By reading an image again after adjusting the reading conditions, you can check if the conditions are appropriate.

CHECK! On reading after setting the image storage condition (**Only NG/All**), images are saved in sequence from **memory 0**. When the scene is switched and reading of that scene starts, the existing data is overwritten starting from **memory 0**.

CHECK! If reading conditions are set for a scene that has not been set, the camera image is saved in **memory 0**.

■ Storage in Memory Cards

When this function is turned ON, images that comply with the image storage conditions are automatically backed up in the Memory Card.

By checking the date and time that the file was created, you can determine when a reading NG event occurred.

By using NG images backed up in the Memory Card for pattern registration, you can improve the reading conditions.

A directory entitled "save" is automatically created in the root directory of the Memory Card. Image data is backed up in this directory.

```
File operation
 /C0/save
 [.        ]    02/07/31
 [..       ]    02/07/31
 imghst    dat  02/07/31
 OK00001   bmp  02/07/31
 OK00002   bmp  02/07/31
 OK00003   bmp  02/07/31
 NG00004   bmp  02/07/31
 NG00005   bmp  02/07/31

ENT:Select S+ESC:Edit
```
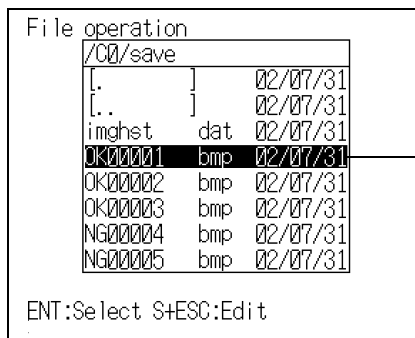

Image data is backed up under file names of the type indicated below.

OK00001.bmp

Judgment Result (OK or NG)

Five-digit serial numbers starting from "00000"

CHECK! The number of files that can be backed up differs according to the capacity of the Memory Card. Use the following information as a guide.

Memory Card capacity	Number of saved files
64 MB	Up to 200
128 MB	Up to 400

CHECK! When **Store to MemCard** is set to ON, the processing time is increased by approximately 2 seconds due to the image backup operation.

■ Display Captures

Turn ON the display capture function to capture the image displayed on the monitor and save it to the Memory Card.

Stored images can be pasted to documents on a personal computer or loaded to the V530-R160 and re-read.

CHECK!

The capture operation takes several seconds, during which reading cannot be performed. To prevent incorrect operation, set this function to **OFF**.

▪ Execution keys

Capture a display by pressing **SHIFT** + **Left** + **Right** Keys simultaneously.

▪ Display capture results

When a capture is executed, **capture in progress** will be displayed at the bottom right of the screen. After that, a directory called IMAGE will automatically be created in the root directory of the Memory Card and the following two types of files will be stored in that directory.

LIVE***.BMP

Density images with 256 graduations will be saved in BMP format. These images can be loaded to the V530-R160 and re-read.

Captured display

CAPT***.BMP

The displayed screen image is saved without alteration in BMP format. (However, the image will have 192 graduations.)

Only this file will be saved if the image was captured while in **SET**, **SYS**, **TOOL** modes.
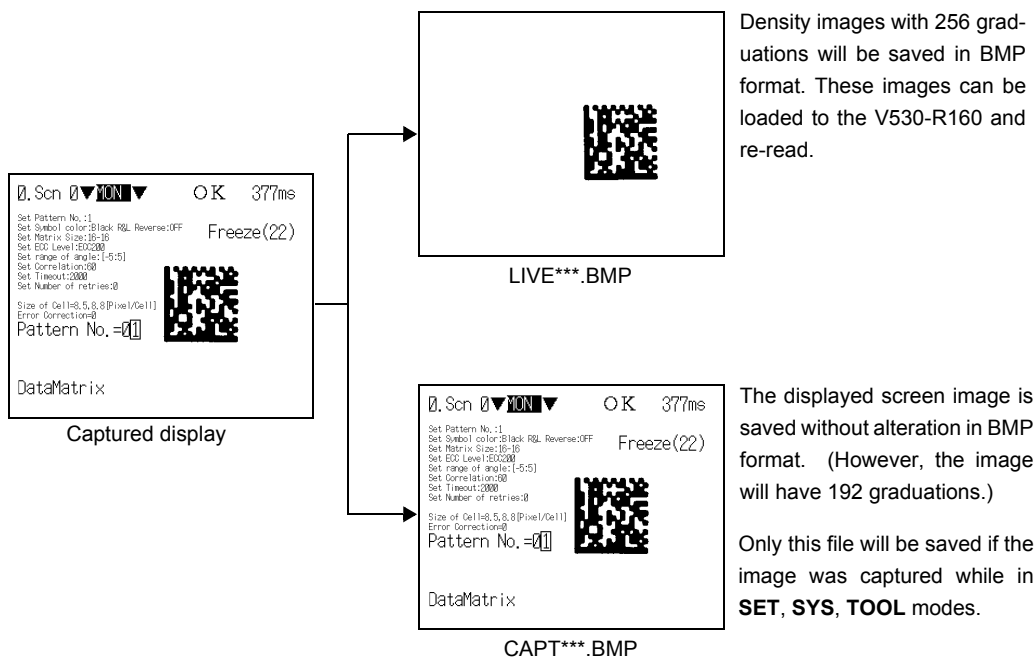

A serial number starting from 000 will be automatically allocated to ***.
The same number is used for both files.

Setting Startup Conditions (Startup Mode)

Use the following procedure to set the status when the power is turned ON. If the V530-R160 is set to start in **RUN** mode for the scene where the desired reading conditions are registered, reading of objects can be started by simply turning the power ON.

Item	Details
Startup scene	Select the startup scene number. (Selection: 0* to 9)
Startup mode	Select the startup mode. (Selection: **SET**, **MON***, **RUN**)
Language	Select the startup language. (Selection: Japanese*, English)

The asterisk (*) indicates the default setting.

1. Go into **SYS** (system) mode and select **Startup mode**.

▼

The Startup mode setting screen will be displayed.

2. Change the settings.

```
Startup scene  :0.Scn 0   ▼
Startup mode   :      MON▼
Language       :  English▼

              End
```

3. Select **End**.

▼

The setting will be registered and the System mode screen will return.

Using BUSY Signals (Error Method)

The BUSY signal is a control signal used to show that the V530-R160 is busy processing. The ON/OFF timing of this BUSY signal is monitored at the host device to time communications. The handling of the BUSY signal can be changed to create a smoother system.

■ Input in the BUSY Status

While reading processing is in progress (while the BUSY signal is ON), the controller will not read image data even if TRIG A is input. Set whether or not the ERR signal is turned ON as notification that the host has not accepted a trigger.

Selection	Details
ERR ON*	When a TRIG A is input during processing (while the BUSY signal is ON), the ERR signal turns ON and reading is not performed. The ERR signal will turn OFF when the next TRIG A is input at the correct timing.
OFF	The ERR signal will not turn ON even if the TRIG A is input during processing. Reading will not be performed.

The asterisk (*) indicates the default setting.

CHECK!   The BUSY signal turns OFF when the reading has been completed.
1. Go into **SYS** (system) mode and select **Error method**.

Refer to page 180.

▼

The Error method setting screen will be displayed.

2. Change the settings.

3. Select **End**.

```
STEP in BUSY :      ERR ON▼

                   End
```

▼
The setting will be registered and the System mode screen will return.

Setting the Calendar Date and Time (Date/Time)

Check if the internal calendar is set to the correct date and time and adjust if necessary.

1. Go into **SYS** (system) mode and select **Date/Time**.

Refer to page 180.

▼

The Date/Time setting screen will be displayed.

2. Check if the date and time is correct.

Adjust if necessary.

3. If the settings do not require adjustment, select **Cancel** to exit this screen.

Select **Update** to save changes to the date and time.

```
Year    : [2002]
Month   : [ 7]
Day     : [31]
Hour    : [13]
Minute  : [22]
Second  : [20]

 Update   Cancel
```

▼

The setting will be registered and the System mode screen will return.

Checking the Version (Version)

Use the following procedure to check the model of Controller and the software system version.

1. Go into **SYS** (system) mode and select **Version**.

Refer to page 180.

▼

The Version information will be displayed.

Select **OK** to validate the settings and leave this screen.

```
V530-R160E Ver.1.00
XXXX/XX/XX    XX:XX

         OK
```

▼

The System mode screen will return.

MEMO

SECTION 8
Communication with the Host

This section describes how to connect host devices through a parallel I/O or serial interface and explains I/O formats.

Parallel I/O

Setting Communications Specifications

This section explains how to set the communications specifications. The same communication settings must be used on both the V530-R160 and the host device.

1. Move the cursor to **RUN** or **MON** and press the **ENT** Key.
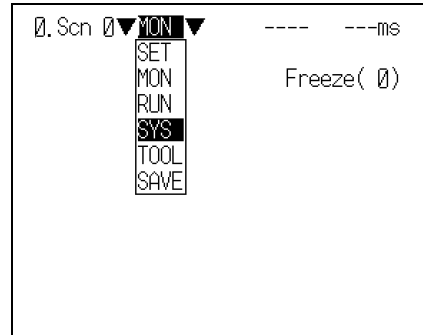

2. Select **SYS**.

```
0.Scn 0▼MON ▼    ----   ---ms
          SET
          MON         Freeze( 0)
          RUN
          SYS
          TOOL
          SAVE
```

▼

The System settings screen will be displayed.

3. Select **Communication**.

```
System settings

Camera/Monitor
Communication
Image storing
Startup mode
Error method
Date/Time

Gate ON delay :[    1.0]ms
Gate ON time  :[    5.0]ms

            End
```

▼
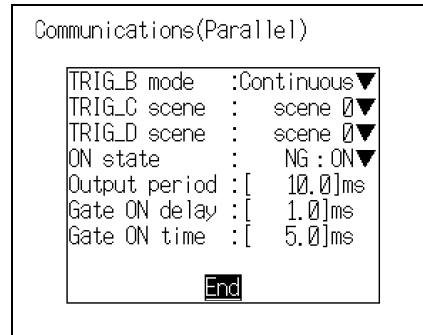

The setting will be registered and the screen in **4.** will return.

Communications Specifications

Item	Description
TRIG B mode (TRIG B)	Select continuous reading or reading until OK judgement output.
	Continuous reading (default setting) — Performs continuous reading while the TRIG B terminal is ON. TRIG B input invalidates the **Reading Settings**/**Number of Retries** setting.
	Level trigger — Repeats reading until an OK (readable) reading judgement is output while the TRIG B terminal is ON. In the case of an NG (not readable) reading, the NG signal is output when the TRIG B is turned OFF.
TRIG C mode (TRIG C)	Switches to the set scene number and reading is executed with the "level trigger" specification. (Scene 0 to 9; default setting: Scene 0)
TRIG D mode (TRIG D)	Switches to the set scene number and reading is executed with the "level trigger" specification. (Scene 0 to 9; default setting: Scene 0)
ON state	Select whether the OK/NG signal is turned ON when the judgement result is OK or when it is NG.
	NG: ON (default setting) — The OK/NG signal is turned ON for an NG reading.
	OK: ON — The OK/NG signal is turned ON for an OK reading.
Output period	Set the output period for reading judgement. Set a value between 2.0 and 10000.0 ms that is greater than the "Gate ON delay + Gate ON time", and less than the reading interval. If the cycle is longer than the reading interval, the output timing will fall behind as the readings are repeated. (2.0 to 10000.0 ms; default setting: 10.0 ms)
Gate ON delay	Set the time from parallel I/O result output to turning ON of the GATE signal. This time is used to wait until the data output becomes stable. Set a time between 1.0 and 1000.0 ms that is longer than the delay time for the host device. (1.0 to 1000.0 ms; default setting: 1.0 ms)
Gate ON time	Set the time during which the GATE signal is ON. Set the time required for the host to input the reading result. (1.0 to 1000.0 ms; default setting: 5.0 ms)

About trigger input, refer to page 194.

SECTION 8 Parallel I/O

Trigger Input and Output Formats

■ Trigger Input

The trigger inputs are TRIG A, TRIG B, TRIG C, and TRIG D. In the **MON/RUN** mode, reading is executed in accordance with input to these signals.

Signal	Description	
TRIG A (One shot reading)	One reading against the currently displayed scene is performed on the rising edge (OFF to ON) of the TRIG A signal. Correct Reading: Reading ends, then reading judgement is output. Incorrect Reading: Reading continues to be performed for the number of retries specified in **Reading settings/Number of Retries**. Setting the Number of Retries: Refer to page 112 (Sec.5). As the TRIG A signal is synchronous with the shutter input of the Camera, an accurate image of the moving object can be obtained.	
TRIG B (Continuous reading/Level trigger)	The currently displayed scene is either continuously read or read until an OK reading judgement. TRIG B input invalidates the **Reading Settings/Number of Retries** setting. TRIG B changes in the way shown below in accordance with the trigger mode in the communications setting menu.	
	Continuous reading	Performs continuous reading while the TRIG B terminal is ON.
	Level trigger	Repeats reading until an OK (readable) reading judgement is output while the TRIG B terminal is ON. In the case of an NG (not readable) reading, the NG signal is output when the TRIG B is turned OFF.
TRIG C	Switches to the scene set in the communications setting menu and executes reading. Use this function when you want to automatically switch between scenes and read them, for example when two cameras are connected. Refer to page 192.	
TRIG D	Switches to the scene set in the communications setting menu and executes reading. Use this function when you want to automatically switch between scenes and read them, for example when two cameras are connected. Refer to page 192.	

■ Output Format

Every time reading is executed a reading result is output.

Output only occurs in the **RUN** mode. There is no output in the **MON** mode.

Signal		Description
OK/NG	OK	OK when 2-dimensional codes are read successfully. The reading data is output to the host via the serial interface.
	NG	NG when 2-dimensional codes are not read successfully. Error codes are output to the host via the serial interface.

NOTICE The initial status of the output signals is OFF. However, the signals may turn ON for approximately 0.5 seconds when the power is turned ON.

Take care with regard to signal input at the host.

Timing Charts

■ One Shot Reading

Note: The output time to RS-232C changes depending on the data volume and baud rate.

Output signal

Output signal	Function
RUN	Turns ON during **RUN** mode.
BUSY	Shows that the V530-R160 is reading an image, changing settings, etc. Do not input the next command while the BUSY signal is ON. Otherwise, the commands input during command execution or processing may not be properly executed.
OK/NG	Outputs the judgement under the set reading conditions. (Can be set to turn ON for either OK or NG judgement.)
GATE	Used to control the timing with which the reading judgement is read at the host device. The duration for which the GATE terminal is turned ON can be set as required for the host device to correctly read the reading judgement. Make the output cycle longer than the gate ON delay plus the gate ON time, but shorter than the duration of the reading (TRIG A input). If the cycle is longer than the duration of the reading, the input timing falls behind as readings are repeated. Gate ON delay, Gate ON time and Output period are set under the set communications conditions. Refer to page 192.

Input signal

Signal	Function
TRIG A	The reading trigger is input from a device such as a photoelectric switch. One reading is performed on the rising edge (OFF to ON) of the TRIG A signal. Turn ON for at least 0.5 ms. The duration of TRIG A signal input depends on reading time. While reading is being performed, the BUSY signal turns ON and input signals are not accepted. Refer to System Examination for the standard reading time. Refer to page 200.

■ Continuous Reading (When Trigger Mode is [Continuous Reading])

Note: The output time to RS-232C changes depending on the data volume and baud rate.

Output signal

Output signal	Function
RUN	Turns ON during **RUN** mode.
BUSY	Shows that the V530-R160 is reading an image, changing settings, etc. Do not input the next command while the BUSY signal is ON. Otherwise, the commands input during command execution or processing may not be properly executed.
OK/NG	Outputs the judgement under the set reading conditions. (Can be set to turn ON for either OK or NG judgement.)
GATE	Used to control the timing with which the reading judgement is read at the host device. The duration for which the GATE terminal is turned ON can be set as required for the host device to correctly read the reading judgement. Make the output cycle longer than the gate ON delay plus the gate ON time, but shorter than the duration of the reading (TRIG A input). If the cycle is longer than the duration of the reading, the input timing falls behind as readings are repeated. Gate ON delay, Gate ON time and Output period are set under the set communications conditions. Refer to page 192.

Input signal

Signal	Function
TRIG B	Performs continuous reading while the TRIG B terminal is ON.

SECTION 8 Parallel I/O

■ Continuous Reading (When Trigger Mode is [Level Trigger])

▪ When the reading is performed correctly:
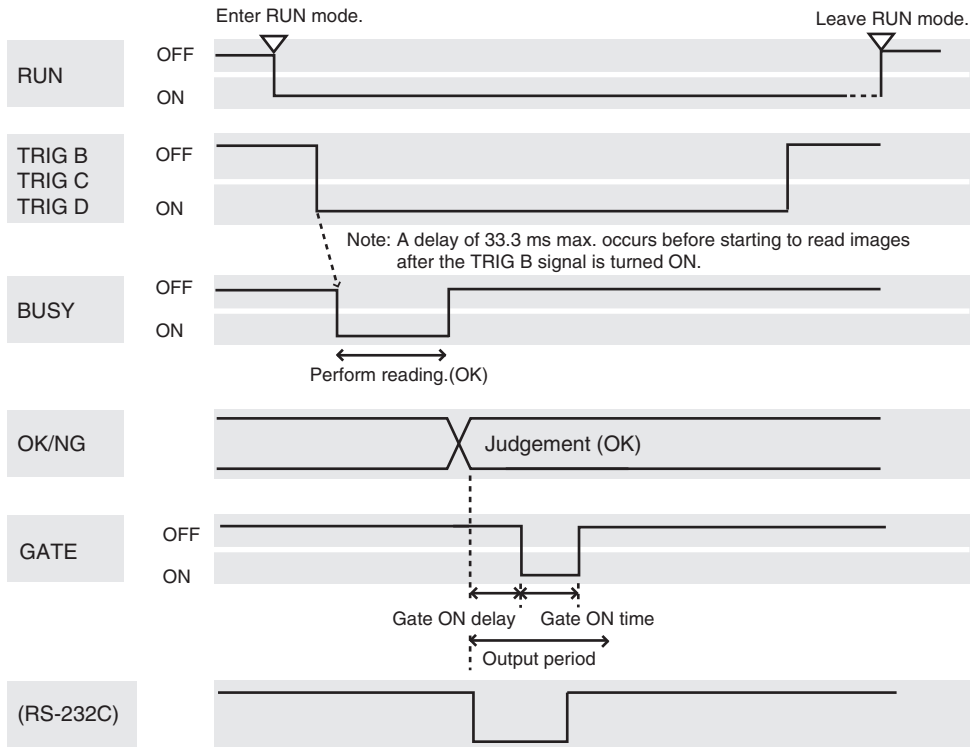

Note: The output time to RS-232C changes depending on the data volume and baud rate.

Output signal

> The function of the signal is the same as for continuous reading (when the trigger mode is set to [Continuous Reading]).

Input signal

Signal	Function
TRIG B	Repeats reading until an OK (readable) reading judgement is output while the TRIG B terminal is ON.
TRIG C	Repeats reading until an OK (readable) reading judgement is output while the TRIG C terminal is ON.
TRIG D	Repeats reading until an OK (readable) reading judgement is output while the TRIG D terminal is ON.

■ OK judgement obtained after repeated reading:
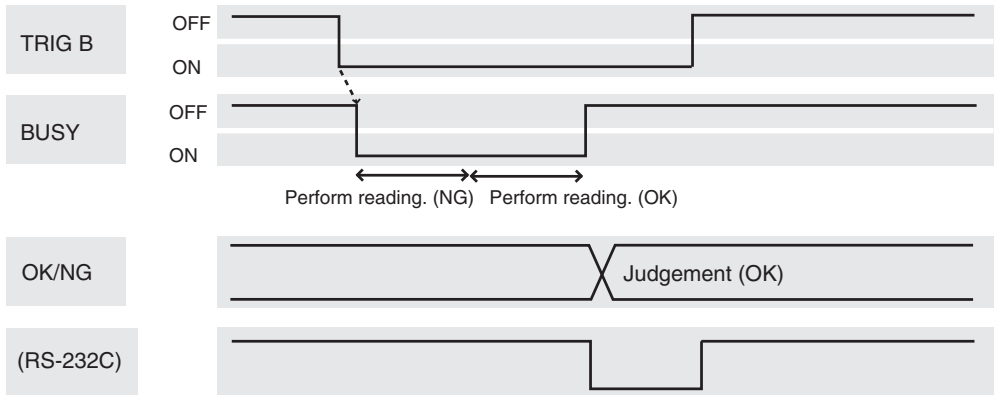

Note: The output time to RS-232C changes depending on the data volume and baud rate.

■ NG judgement after repeated reading:
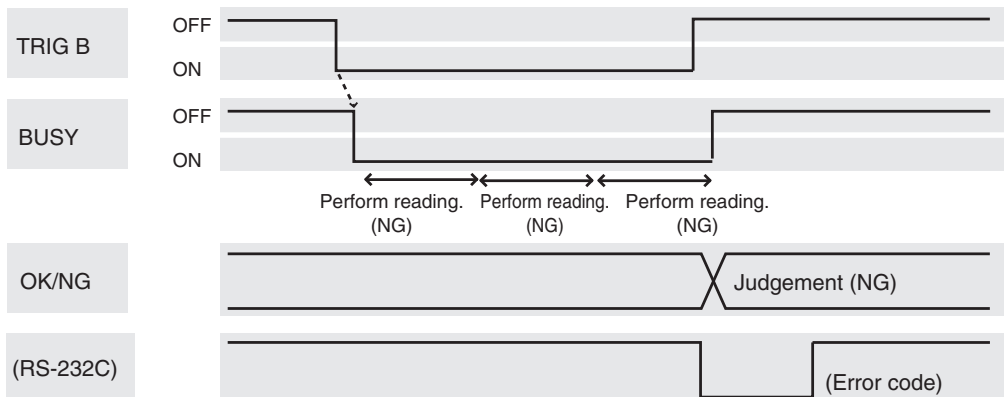

Note: The output time to RS-232C changes depending on the data volume and baud rate.

System Examination

■ Processing Time Calculation

Processing time (reading time) is calculated as follows:
Note: When a through image is displayed, and depending on the
trigger input method, there may be a delay of up to 33.3 ms
between trigger input and the start of image loading.
■ Reading Moving Objects

When reading a moving object, problems such as a drop in the reading percentage are likely to
occur, and therefore due attention must be paid to the following points.
Please note the following to prevent delay when loading images.

• Use the TRIG A signal for timing input.
As the TRIG A signal is synchronous with the shutter input of the Camera, an accurate image of
the moving object can be obtained.
• Set the image to be displayed on the monitor to **Freeze**.
When through images are displayed, a delay of 33.3 ms max. occurs before loading images
after the TRIG A signal input.

▪ Line speed

If the object moves while the image is being loaded after the shutter is released, the image will be blurred. Fix the speed of the line by taking factors such as the shutter speed (which can be changed in the setting menu), the cell size for the object, and the field of vision of the camera into account.

If the line speed is too high...

The object has already passed, the image is blurred and cannot be read.
▪ Tact time

A certain interval is necessary between reading objects during which the next trigger signal is not input. This interval (time) is called Tact Time.

Tact time
Example: Processing time for reading: 500 ms; Line speed: 30 m/min.

$$\frac{30 \ _{(m/min)}}{60 \ _{(sec)}} \ \times \ 0.5 \ _{(sec)} \ = \ 0.25 \ (m)$$

The distance moved in 500 ms is 0.25 m. Therefore, an interval allowing 0.25 m min. of movement is necessary.

▪ Number of retries

If reading is NG, reading continues to be performed for the number of retries specified by the setting conditions. When reading moving objects, reading may continue after the object has left the field of vision.

 Refer to page 112 (Sec.5).

■ Level Trigger Reading

For timing input, use TRIG B, TRIG C, and TRIG D.

Regardless of the displayed image (through/freeze), a 33.3 ms max. delay occurs before loading the image after a TRIG signal is input.

SECTION 8 **Parallel I/O**

Serial Interface (Normal)

Communications with a host such as a personal computer or programmable controller are performed in no-protocol format via the serial interface. Set the **SYS/Communication/RS-232C/422** mode to **Normal**.

Refer to page 206.

- **SET** mode

  Command input is not accepted.

- **MON** mode

  Command input is accepted, but the reading results are not output to the serial interface. They are just confirmed on the monitor.

- **RUN** mode

  Possible to input commands and output the reading results.

Flow Charts

■ When the Serial Interface is used for both Input and Output
1:1 connection or 1:N (multi drop) connection is possible.

▪ 1:1 connection
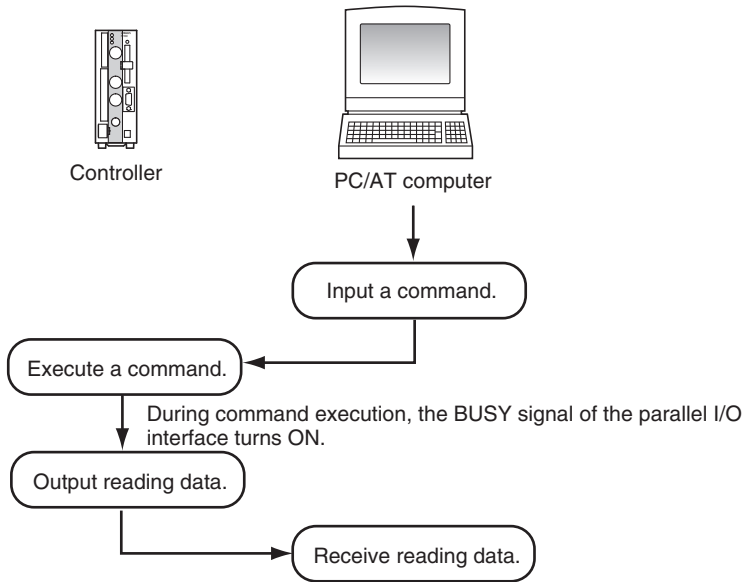

Controller   PC/AT computer

Input a command.

Execute a command.

During command execution, the BUSY signal of the parallel I/O interface turns ON.

Output reading data.

Receive reading data.

* When **Xon/off** is selected for flow control
A timeout error occurs if there is no response from the host computer within the set time when **Xon/off** is selected for flow control, and it is assumed that the line is broken or the computer is not working correctly. The controller displays an error message on the screen and turns the ERR signal of the parallel I/O interface ON.

■ Program Examples
```
100 CLOSE #1
110 OPEN "COM:E73NN" AS #1              'Communications port OPEN status
120 PRINT #1, "@GL"+CHR(&H0D)           'One shot reading command transmission
130 INPUT #1, RESDATA$                  'Loading data (with Footer code CR)
140 PRINT "READ DATA=" RESDATA$         'Displaying reading data
150 GOTO 120                            'Repeat
160 END
```

- 1:N (Multi Drop) connection
Using a branching link adapter, one host can communicate with multiple controllers (up to 31).
The unit number is attached to the prefix of all communication data, so set a different unit number
for each V530-R160.

After the V530-R160 reads a code, it holds the data without outputting it.
To output the data, issue a polling command.
Note that when the data is output, the controller performs the next reading operation and the pre-
viously read data is overwritten.

Example:
Input a command to controller No. 01 and obtain the result.
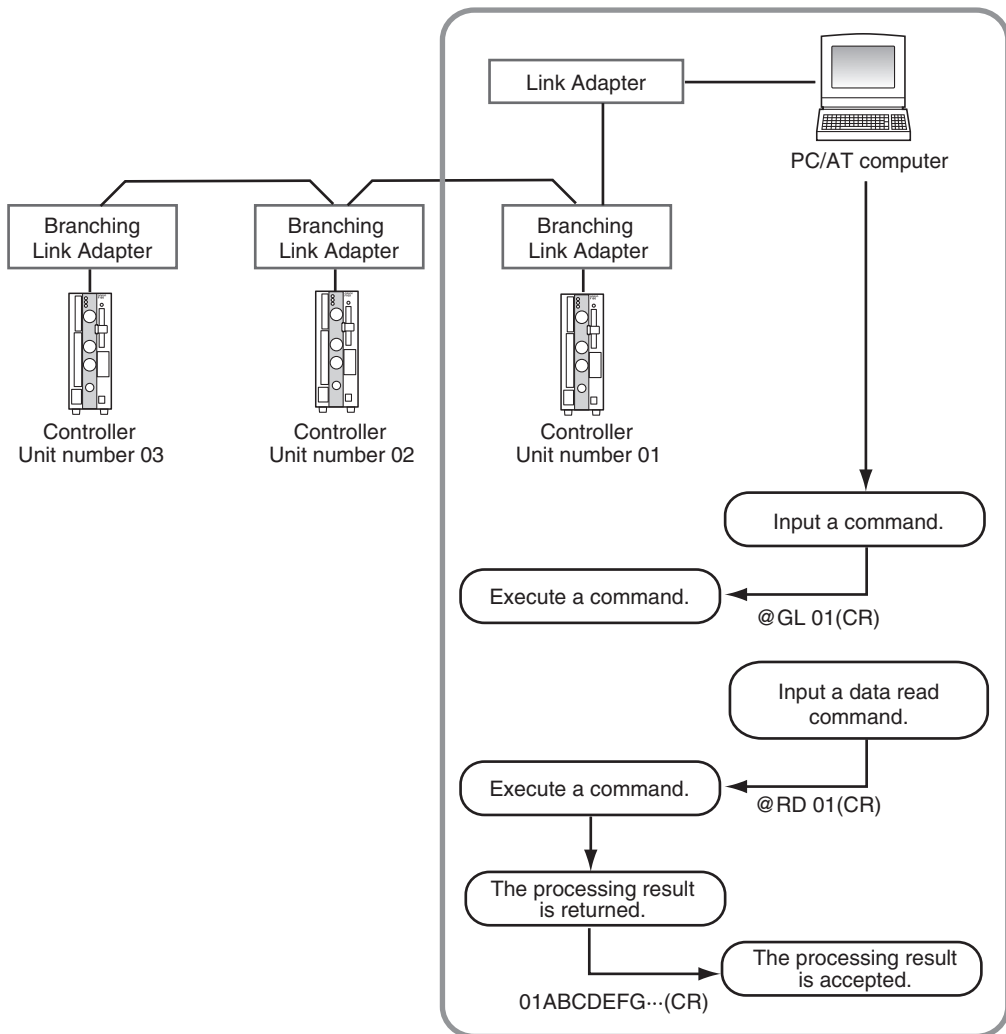

■ TRIG A Signal as Reading Trigger
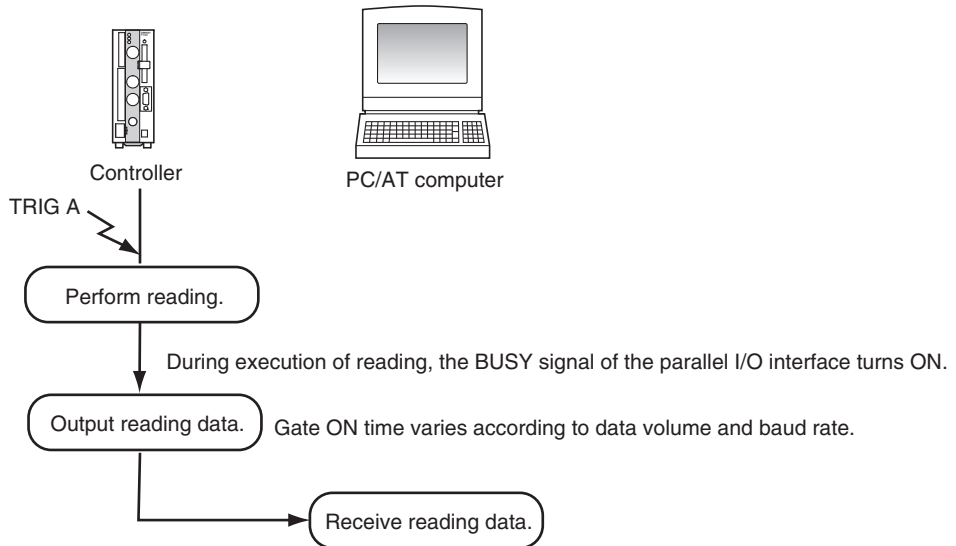

Controller   PC/AT computer

TRIG A

Perform reading.

During execution of reading, the BUSY signal of the parallel I/O interface turns ON.

Output reading data.   Gate ON time varies according to data volume and baud rate.

Receive reading data.

* When **Xon/off** is selected for flow control
  A timeout error occurs if there is no response from the host computer
  within the set time when **Xon/off** is selected for flow control, and it is
  assumed that the line is broken or the computer is not working correctly.
  The controller displays an error message on the screen and turns the
  ERR signal of the parallel I/O interface ON.

Setting Communications Specifications

This section explains how to set the communications specifications. The same communication settings must be used on both the V530-R160 and the host device.

1. Move the cursor to **MON** or **RUN** and press the **ENT** Key.

2. Select **SYS**.

```
0.Scn 0▼MON ▼    ----  ---ms
        SET
        MON        Freeze( 0)
        RUN
        SYS
        TOOL
        SAVE
```

▼

The System settings screen will be displayed.

3. Select **Communication**.

```
System settings

 Camera/Monitor
 Communication
 Image storing
 Startup mode
 Error method
 Date/Time
 Version

Select communication methods.
```

▼

The selections will be displayed.

4. Select **RS-232C/422**.

```
Communication

 RS-232C/422
 Normal
 Host link
 Parallel
 Multi Drop
 Output settings

Select communication methods of
the RS-232C.
```

▼
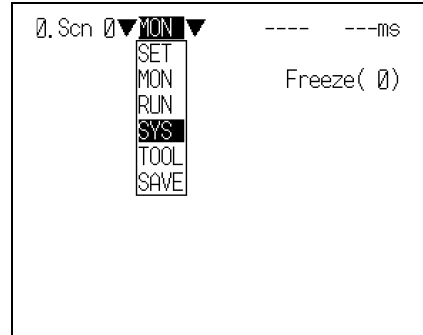

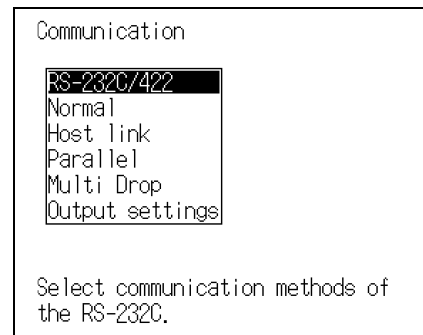

The screen for setting the communications specifications is displayed.

5. Make the settings for each item.
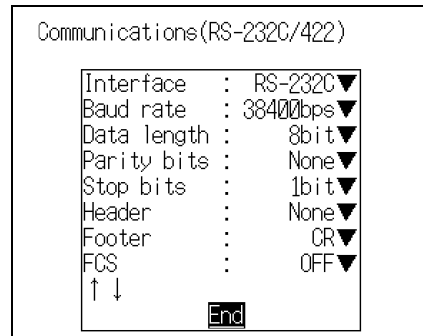

6. Select **End**.

```
Communications(RS-232C/422)

  Interface   :  RS-232C▼
  Baud rate   : 38400bps▼
  Data length :    8bit▼
  Parity bits :    None▼
  Stop bits   :    1bit▼
  Header      :    None▼
  Footer      :      CR▼
  FCS         :     OFF▼
  ↑↓
           End
```

▼

The setting will be registered and the screen in **4.** will return.

Set items and their details

Item	Selection	
Interface	RS-232C*, RS-422	
Baud rate (See note 1.)	2400, 4800, 9600, 19200, 38400*, 57600, 115200 (bps)	Set the same settings as those set for the personal computer.
Data length	7, 8* (bit)	
Parity bits	None*, Odd, Even	
Stop bits	1*, 2 (bit)	
Header	None*, STX, ESC	
Footer	CR*, LF, CR+LF, ETX	
FCS	OFF*, ON	
Mode	Select **Normal**. (Normal*, Host link)	
Protocol (See note 2.)	XMODEM*, ZMODEM	

The asterisk (*) indicates the default setting.

Note 1: Since communications speeds higher than 20 kbps are not defined with the RS-232C standard, depending on the cable length, if **38400 bps** or a higher setting is selected it may not be possible to perform communications properly. If this happens, change the setting to **19200 bps** or lower.

Note 2: The XMODEM (-1K) protocol is not supported.

CHECK!

Make the following settings when using the save and load commands (@CL, @CS, etc.)

Item	Setting
Data length	8 bits
Parity bits	None
Stop bits	1 bit
Flow control	None

Refer to page 208.

■ Flow Control Settings

Set the flow control and timeout time when communicating in the **Normal** mode with a host such as a personal computer.

1. Select **Normal** on the communications specifications setting screen.

```
Communication

 RS-232C/422
 Normal
 Host link
 Parallel
 Multi Drop
 Output settings

Select the Flow Control settings
```

▼
The Normal setting screen will be displayed.

2. Make the settings for each item.

3. Select **End**.

```
Communications(Normal)

Flow control :   None▼
Timeout    :[ 5]s
          End
```

▼

The setting will be registered and the screen in **1.** will return
.

Set Items and their details

Item	Selection	
Flow control	None*	No flow control is performed. 🔆 If using the save and load commands (@CS, @CL, etc.), select **None**. CHECK!
	Xon/Xoff	The software performs flow control. Data is transmitted in accordance with the **Xon**/**Xoff** code sent from the host.
Timeout	Set the number of seconds (1 to 120 seconds) before a timeout error occurs. (1 to 120 s; default setting: 5 s)	

The asterisk (*) indicates the default setting.

? Flow control

Communications are carried out while checking the status of the host. If there is no response from the host for longer than the set timeout time, a timeout error occurs, and an error message is displayed on the screen.

The parallel I/O error signal also turns ON.

■ Multi Drop Settings

Set whether the multi drop function is to be used or not, and the unit numbers assigned to the controllers.

The unit number is attached to the prefix of all communication data, so set a different unit number for each V530-R160. A V530-R160 will not respond to a command with a unit number other than the one assigned to it.

1. Select **Multi Drop** on the communications specifications settings screen.

```
Communication

 RS-232C/422
 Normal
 Host link
 Parallel
 Multi Drop
 Output settings

Select the Multi Drop Settings.
```

▼
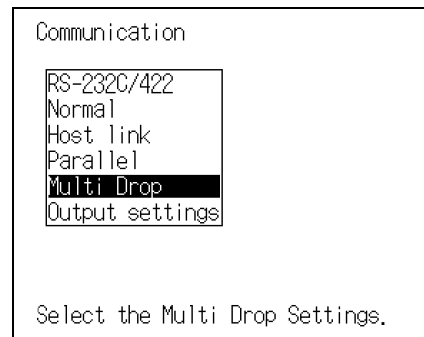

The Multi drop setting screen will be displayed.

2. Make the settings for each item.

3. Select **End**.

```
Communications(Multi drop)

Settings   :    OFF▼
Unit number :[ 1]

          End
```

▼

The setting will be registered and the screen in **1.** will return.

Set Items and their details

Item	Selection	
Multi drop	OFF*	No Multi drop is performed.
	ON	Multi-drop connections are used. When "ON" is set, even if reading processing is executed the results will not be output to the serial interface automatically. The results will be output when a Send Data instruction (Polling Command) is sent from the host.
Unit number	Set the unit numbers of the controllers. (1 to 31; default setting: 1)	

The asterisk (*) indicates the default setting.

■ Settings for Data Output

Set the method for data output to the host.

1. Select **Output settings** on the communications specification setting screen.

```
Communication

RS-232C/422
Normal
Host link
Parallel
Multi Drop
Output settings

Select the output data via
RS-232C.
```

▼

The setting screen will be displayed.

2. Make the settings for each item.

3. Select **End**.

```
Communications(Output settings)

Attach digit no.   :OFF▼
Limit Data Function:OFF▼
Start Point        :[  1]
End Point          :[999]
Polling            :OFF▼

         End
```

▼

The setting will be registered and the screen in **1.** will return.

Limit Data Function   Limit Data Function
Start Point   End Point

0 3 0 2 0 0 1 0 3 2 6 - A B C D E F G - 0 8 1 5

Number   Reading data
of digits

Set Items and their details

Item		Selection
Attach digit no.	OFF*	The number of digits of the reading data is not output.
	ON	The number of digits of the reading data is output. The number of digits is shown in bytes. • A letter or a number is 1 digit.
Limit Data Function	OFF*	All of the reading data is output.
	ON	The specified range of reading data is output. Specify the data output range with **Start Point** and **End Point**. Reading data Example:　030 20010326 - ABCDEFG - 0815 Start Point: [4]　　End Point: [8]
Start Point		When **ON** is set for **Limit Data Function**, set the **Start Point** of the data to be output. The start number is counted from the beginning of the reading data. The number of digits is not included. (1 to 999; default setting: 1)
End Point		When **ON** is set for **Limit Data Function**, set the **End Point** of the data to be output. The end number is counted from the beginning of the reading data. The number of digits is not included. (1 to 999; default setting: 999)
Polling	OFF*	The reading data will be output to the host immediately after it is read.
	ON	When the V530-R160 is connected with a 1:1 connection, use the polling command to control the timing of reading data outputs. Reading data is output when a polling command is input.

The asterisk (*) indicates the default setting.

SECTION 8　Serial Interface (Normal)

Command List

Command List

▪1:1 connection

• Instructing operations at the controller
These are the commands used to instruct the controller to perform operations such as reading or changing the scene.

Command	Function	Page
@GL	Performs one reading.	p.216
@GC	Starts continuous reading.	p.216
@SC	Stops continuous reading.	p.217
@RD	Outputs reading data to the serial interface. (Polling)	p.217
@RL	Outputs reading data to the serial interface. (Polling with digit position specified)	p.218
@SN	Obtains the scene number of the currently displayed scene.	p.218
	Switches to the specified scene number.	p.219
@DC	Switches the display status (through/freeze) of the image.	p.219
@MC	Switches between the **MON** mode and the **RUN** mode.	p.220
@MT	Obtains the processing time.	p.220
@SV	Saves the setting details in the flash memory.	p.221
@VR	Reads the system's version information.	p.221

• Saving and loading data
These commands back up the data and saved images set at the controller in the host.

Command	Function	Page
@AL	Loads the system and scene data from the host.	p.222
@AS	Saves the system and scene data to the host.	p.222
@BL	Loads the image data from the host.	p.223
@BS	Saves the image data to the host.	p.223
@CL	Loads the scene data from the host.	p.224
@CS	Saves the scene data to the host.	p.224

▪ 1:N connection (commands used in multi drop operation)

Command	Function	Page
@GL	Performs one reading.	p.216
@RD	Outputs reading data to the serial interface. (Polling)	p.217
@MS	Obtains the scene number of the currently displayed scene.	p.226
	Switches to the specified scene number.	p.226

SECTION 8   Serial Interface (Normal)

I/O Format

■ Input Format (Command Format)

The following commands can be input from the host to the controller.
Match the communications specifications of the controller and the host in advance.

• 1:1 connection
@	X	X		<Parameter>	<Footer>

1.　　　2.　　3.　　　　4.

1. Specifies the name of the command.

2. Insert one space. (A blank box indicates that a space must be inserted.)

3. Specification is required here for some of the commands input in the boxes indicated by number (1). Make numerical or other settings if necessary.

4. Input the <Footer> at the end of a command.

• 1:N (multi drop) connection
@	X	X		<Unit number>	<Parameter>	<Footer>

1.　　　　2.　　3.　　　　　　4.　　　　5.

1. Specifies the name of the command.

2. Insert one space. (A blank box indicates that a space must be inserted.)

3. In a 1:N (multi drop) connection, set the unit number (01 to 31) of the controller the command is to be sent to.

4. Specification is required here for some of the commands input in the boxes indicated by number (1). Make numerical or other settings if necessary.

5. Input the <Footer> at the end of a command.

For details on the format for each command, refer to *Command Format.*

■ Output Format for Reading Data

The output format for the reading data is shown here.

A setting can be made to add or not add the boxes that are written with dashed lines [_ _ _ _ _ _].

- **SYS**/**Communication**/**RS-232C**/**422** 📖 Refer to page 206.
- Setting whether or not to add the header and FCS.
- Selecting the footer.
- **SYS**/**Communication**/**Data Output Settings** 📖 Refer to page 210.
- Setting whether or not to use polling commands to control the output timing.
- Setting whether or not to add digits.

▪ 1:1 connection
- Reading OK

| \<Header\> | \<Number of digits\> | \<Reading data\> | \<FCS\> | \<Footer\> |
A setting can be made to add or not add the boxes that are written with dashed lines [_ _ _ _ _].

- Reading NG

| \<Header\> | ? | \<Error code\> | \<FCS\> | \<Footer\> |
For error code details, refer to *Error Codes and Countermeasures* on p.253 in *Section 9, Troubleshooting*.

▪ 1:N connection (using multi drop)
- Reading OK

| \<Header\> | \<Unit number\> | \<Number of digits\> | \<Reading data\> | \<FCS\> | \<Footer\> |

The unit number of the controller that output the reading data

- Reading NG

| \<Header\> | \<Unit number\> | ? | \<Error code\> | \<FCS\> | \<Footer\> |
* The data will not be output for the 1:N (multi drop) connection unless the polling command (@RD) is executed.

Command Format

- 1:1 connection

@ GL

Function • • • Performs one reading. Reading ends when the reading is correctly performed (OK). When the reading is not correctly performed (NG), reading continues to be performed for the number of retries specified in the setting conditions.

Send	@	G	L	<Footer>

Receive   See Output Format

Refer to page 227.

An error will occur if menu items are not registered.

<Header>	E	R	<Footer>

@ GC

Function • • • Performs continuous reading until the stop command (@SC) is sent.

Refer to page 217.

Send	@	G	C	<Footer>

Receive   See Output Format

Refer to page 227.

@SC

Function • • • Stops continuous reading.

Send

@	S	C	<Footer>
@RD

Function • • • Outputs the latest reading data to the serial interface. (Polling Command)

Send

@	R	D	<Footer>

Receive   See Output Format.

Refer to page 227.

An error will occur if reading has not been performed since the menu items were registered.

<Header>	E	R	<Footer>

@RL

Function • • • Outputs the data corresponding to the specified digit position to the serial interface. (Polling command with digit position specified)

Only the reading data will be output. The number of digits is not output.

Send | @ | R | L | | <Start Point> | | <End Point> | <Footer>

Receive   See Output Formats.

Refer to page 227.

An error will occur if reading has not been performed since the menu items were registered.

<Header> | E | R | <Footer>

@SN

Function 1 • • • Obtains the scene number (0 to 9) of the currently displayed scene.
Send | @ | S | N | <Footer>

Receive   Command executed correctly:

<Header> | <Scene number> | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>
Function 2 • • • Changes the currently displayed scene.

Send | @ | S | N | | <Scene number> | <Footer>

▪Set the desired scene number (0 to 9).

Receive Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

@ DC

Function • • • Changes the monitor display status (through/freeze).

Send | @ | D | C | | <Display code> | <Footer>

▪Set the display code to 0 to specify Through display or 1 to specify Freeze display.

Receive Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

SECTION 8 Serial Interface (Normal)

@ MC

Function • • • Changes the mode to **MON** (monitor) mode or **RUN** mode.

Send | @ | M | C | | <Mode> | <Footer>

▪Set the mode to 0 to specify **MON** mode or 1 to specify **RUN** mode.

Receive | Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

@ MT

Function • • • Reads the most recent read-processing time.

Send | @ | M | T | <Footer>

Receive | Command executed correctly:

<Header> | <Processing time> | <Footer>

▪The 5-digit processing time (00000 to 99999 ms) is returned if the command was executed correctly.

A value of 99999 will be returned if the actual processing time exceeds 99,999 ms.

A value of 00000 will be returned if the processing time could not be read.

Example: A value of 00230 will be returned when the most recent processing time was 230 ms.

@ SV

Function • • • Saves the system data and all of the scene data to the V530-R160.

Send | @ | S | V | <Footer>

Receive | Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>
@ VR

Function • • • Reads the system's version information.

Send | @ | V | R | <Footer>

Receive | Command executed correctly:

<Header> | <Version> | <FCS> | <Footer>
▪Example version information:
V530-R160 Ver1.00 2002/05/30 12:00

@ AL

Function • • • Loads the system and scene data to the V530-R160 from the host.
Send | @ | A | L | <Footer>

Receive Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

CHECK! The data transfer is performed with XMODEM (-CRC or SUM) or ZMODEM protocol.
The XMODEM (-1K) protocol is not supported.
The V530-R160 sends the character string "READY" to the host device when the V530-R160 has completed its initialization. Wait for the "READY" string to be received at the host device before starting the data transfer.

@ AS

Function • • • Saves the system and scene data to the host.
Send | @ | A | S | <Footer>

Receive Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

CHECK! The XMODEM (-1K) protocol is not supported.

@ BL

Function • • • Loads the image data from the host to the V530-R160.

Send | @ | B | L | | \<Memory number\> | \<Footer\> |

- For \<Memory number\>, set a controller memory number in the range 00 to 35.
  Example: To load to memory number 3:

  BL 03

Receive   Command executed correctly:

| \<Header\> | O | K | \<Footer\> |

Command not executed correctly:

| \<Header\> | E | R | \<Footer\> |

CHECK!

The data transfer is performed with XMODEM (-CRC or SUM) or ZMODEM protocol.

The XMODEM (-1K) protocol is not supported.

The V530-R160 sends the character string "READY" to the host device when the V530-R160 has completed its initialization. Wait for the "READY" string to be received at the host device before starting the data transfer.

@ BS

Function • • • Saves the image data from the V530-R160 to the host.

Send | @ | B | S | | \<Memory number\> | \<Footer\> |

- For \<Memory number\>, set a controller memory number in the range 00 to 35.
  Example: To save memory number 3:

  BS 03

Receive   Command executed correctly:

| \<Header\> | O | K | \<Footer\> |

Command not executed correctly:

| \<Header\> | E | R | \<Footer\> |

CHECK!

The XMODEM (-1K) protocol is not supported.

@ CL

Function • • • Loads the scene data from the host to the V530-R160.
Send | @ | C | L | <Footer>

Receive   Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

CHECK!

The data transfer is performed with XMODEM (-CRC or SUM) or ZMODEM protocol.

The XMODEM (-1K) protocol is not supported.

The V530-R160 sends the character string "READY" to the host device when the V530-R160 has completed its initialization. Wait for the "READY" string to be received at the host device before starting the data transfer.

@ CS

Function • • • Saves the scene data from the V530-R160 to the host.
Send | @ | C | S | <Footer>

Receive   Command executed correctly:

<Header> | O | K | <Footer>

Command not executed correctly:

<Header> | E | R | <Footer>

CHECK!

The XMODEM (-1K) protocol is not supported.

▪1:N (Multi Drop) Connection
@ GL

Function • • • The controller with the specified unit number performs one reading. Reading ends when the reading is correctly performed (OK). When the reading is not correctly performed (NG), reading continues to be performed for the number of retries specified in the setting conditions. Controllers with unit numbers other than the specified unit number do nothing.

Send

@	G	L		<Unit number>	<Footer>

Receive The data will not be output to the host (serial interface) by simply executing this command. To output the data, send a polling command (@RD).
Also, no response will be returned if the menu items are not registered.

@ RD

Function • • • The controller with the specified unit number outputs the latest reading data to the host (serial interface). (Polling command)

Send

@	R	D		<Unit number>	<Footer>

Receive Reading OK

<Header>	<Unit number>	<Number of digits>	<Reading data>	<FCS>	<Footer>
Reading NG

<Header>	<Unit number>	?	<Error code>	<FCS>	<Footer>

If reading has not been performed since the menu items were registered

<Header>	<Unit number>	ER	<Footer>
* A setting can be made to add or not add the boxes that are written with dashed lines ⌐⌐⌐.

@ MS

Function1 • • • Obtains the scene number (0 to 9) of the currently displayed scene.

Send	@	M	S		<Unit number>	<Footer>

Receive   Data is output from the controller without a polling command.

<Header>	<Unit number>	<Scene number>	<Footer>

Function 2 • • • Changes the currently displayed scene.

Send	@	M	S		<Unit number>		<Scene number>	<Footer>
▪Set the desired scene number (0 to 9).

Receive   Data is output from the controller without a polling command.
Command executed correctly:

<Header>	<Unit number>	O	K	<Footer>

Command not executed correctly:

<Header>	<Unit number>	E	R	<Footer>
■ Reading Data Output Format
The following diagrams show the output format used when outputting reading data.
The data items in the dashed lines can be included or omitted from the output format.

- **SYS/Communication/RS-232C/422** Refer to page 206.
  - Whether or not a header and FCS are appended
  - Which footer is chosen

- **SYS/Communication/Data Output Settings** Refer to page 210.
- Select whether or not to use the polling command to control the timing of reading data outputs.
- Select whether or not to include the number of digits of reading data.

▪1:1 connection

- When the reading is correctly performed:

| <Header> | <Number of digits> | <Reading data> | <FCS> | <Footer> |
The data items in the dashed lines can be included or omitted from the output format.

- When the reading is not correctly performed:

| <Header> | ? | <Error code> | <FCS> | <Footer> |
▪1:N connection (When using with multi drop)

- When the reading is correctly performed:

| <Header> | <Unit number> | <Number of digits> | <Reading data> | <FCS> | <Footer> |

Unit number of the controller that outputs the reading data

▪ When the reading is not correctly performed:

| <Header> | <Unit number> | ? | <Error code> | <FCS> | <Footer> |
■ FCS Calculation

FCS is the result of taking the XOR for each byte between the header and footer (8 bits) and converting to 2-character ASC ll code.

The FCS (Frame Check Sequence) can be attached to output data to improve communications.

Each time data is received, the host link calculates the FCS and checks it against the FCS attached to the sent data so that the sent data can be checked for errors.

For details on an FCS check program, see *SECTION 10 Appendix FCS Check Program Example (BASIC)*.

Refer to page 278 (SEC.10).

An FCS can only be appended if the communications mode is **Normal**.

CHECK! Refer to page 206.

Example: Reading data: ABCDEFG
        The details of the reading data and calculation method are as follows.

• Reading data

Header	A	B	C	D	E	F	G	4	0	Footer

Reading data　　　　FCS

• Calculation

Reading data		ASCII code		Hexadecimal notation	
A		41		0100 0001	XOR
B	On conversion to ASCII code:	42	On conversion to hexadecimal notation:	0100 0010	XOR
C		43		0100 0011	XOR
D		44		0100 0100	XOR
E		45		0100 0101	XOR
F		46		0100 0110	XOR
G		47		0100 0111	

On obtaining the exclusive logical sum:

0100 0000

On conversion to ASCII code:

FCS data: 4   0
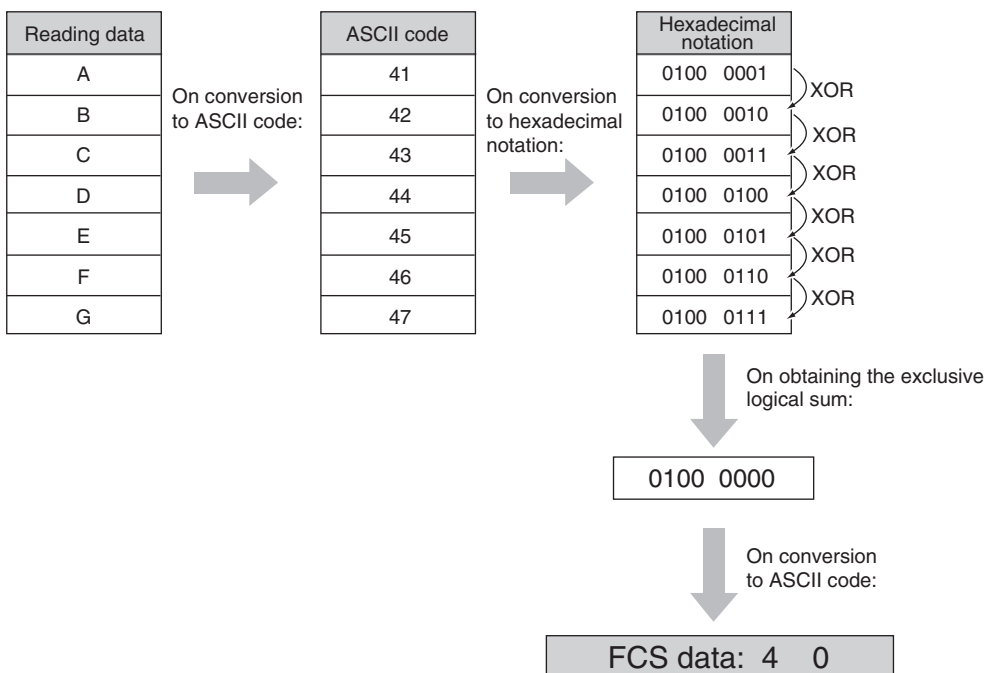

Connection Examples for Programmable Controller (Normal)

This is a connection example using the CQM1H programmable controller made by OMRON.
The flow is such that a read command [@GL] is input from the programmable controller to the controller, then the controller outputs the judgement result to the programmable controller.

■ System Configuration
■ RS-232C Cable Wiring (XW2Z-200T/XW2Z-500T)

The maximum cable length is 15 m.

Controller				Programmable Controller	
Signal	Pin			Pin	Signal
SD	2			2	SD
RD	3			3	RD
NC	4			4	RS
RDB(RD+)	5			5	CS
GND	9			9	GND
Hood	—			Hood	—

Only use a shielded cable.
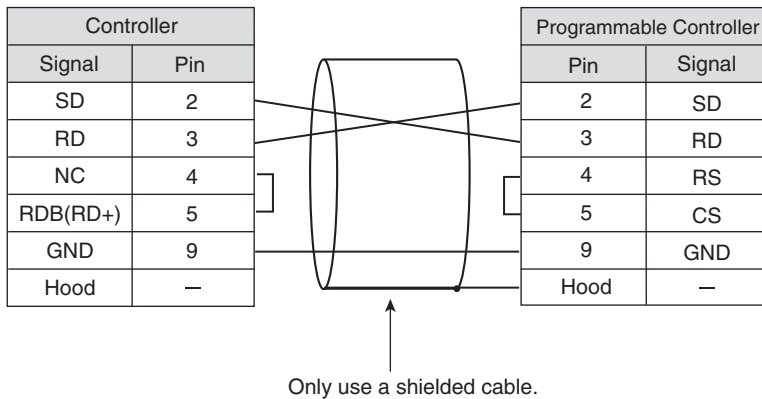

■ Settings at the Programmable Controller

• Turn OFF DIP switch 5 of CQM1H.

• Set the communications conditions.

Set DM6645 to **1001**, DM6646 to **0904**, DM6648 to **1000** and DM6649 to **0D00**.

Refer to the operation manual for CQM1H for the ways to change the setting.

• Set the read command.

Set DM0100 to **4047** and DM0100 to **4C00**.

Item	Setting
Communications method	Normal
Baud rate	9600 bps
Data length	7 bit
Parity bits	EVEN
Stop bits	2 bit
Header	None
Footer	CR

■ Settings at the Controller

Make the following communication settings.

Item	Setting
Baud rate	The same settings as those of the Programmable Controller.
Data length	
Parity bits	
Stop bits	
Header	
Footer	
FCS	OFF
Mode	Normal

■ Program Examples

This is a program in which a read command is sent from the programmable controller (model CQM1H) and the data read by the controller is received by the CQM1H.

1. Set the reading conditions of the V530-R160 and set the reading mode to **RUN** mode.

2. Send the read command from the programmable controller.

▼

The controller performs reading.
The data received at the CQM1H is saved starting from DM0200.

*AR8.06: RS-232C port reception completed flag

Serial Interface (Host Link)

Communicates with a host such as a programmable controller via a serial interface in the host link format. There is no need to set a communications program at the programmable controller side. Set **Host link** for **Mode** at **SYS/Communication/RS-232C/422**.

Refer to page 236.

Only a 1:1 connection can be used with the host link mode. 1:N connections are not supported.

CHECK!

• **SET** mode

Command input is not accepted.

• **MON** mode

Command input is accepted, but reading results are not output to the serial interface. They are just confirmed on the monitor.

• **RUN** mode

Possible to input commands and output the reading results.

When the host link mode is used, if the power to the programmable controller is turned OFF, the setting for **Mode** at **SYS/Communication/RS-232C/422** is automatically set to **Normal**.

CHECK! If there is a problem using this serial interface specification, communicate using the no-protocol format.

Flow Charts

■ When the Serial Interface is used for both Input and Output

Commands for the V530-R160 are written to the Read Area in the programmable controller. The V530-R160 automatically reads these commands and executes them.

Reading results are written to the programmable controller.
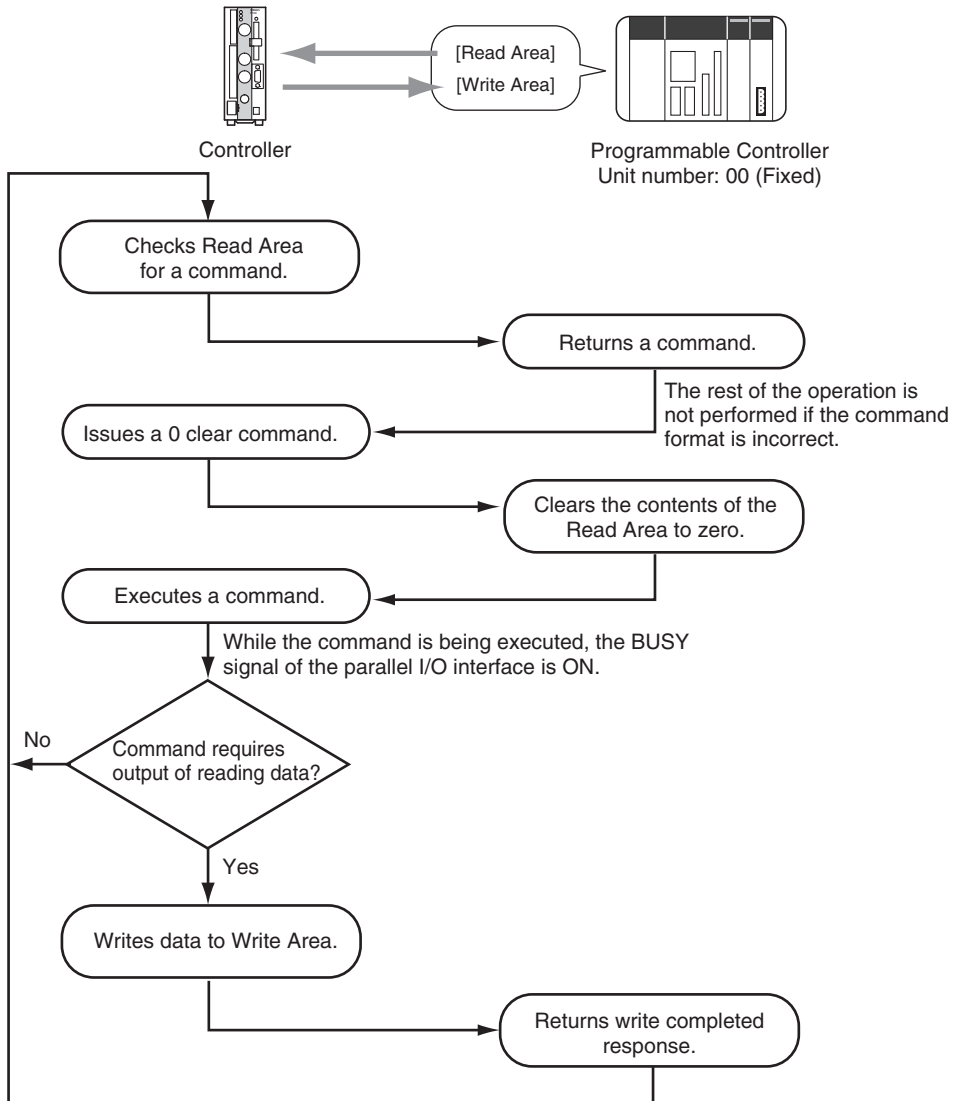

Controller

Programmable Controller
Unit number: 00 (Fixed)

[Read Area]
[Write Area]

Checks Read Area
for a command.

Returns a command.

The rest of the operation is not performed if the command format is incorrect.

Issues a 0 clear command.

Clears the contents of the Read Area to zero.

Executes a command.

While the command is being executed, the BUSY signal of the parallel I/O interface is ON.

No ← Command requires output of reading data?

Yes

Writes data to Write Area.

Returns write completed response.

A timeout error occurs if there is no response within 5 seconds and it is assumed that the line is broken or the programmable controller is not working correctly. An error message is displayed on the screen and the ERR signal of the parallel I/O interface is turned ON.

If there is a problem using this serial interface specification, communicate using the no-protocol format.

CHECK!

■ TRIG A Signal as Reading Trigger

The trigger is used to cause the V530-R160 to read data and the data is written to the programmable controller.
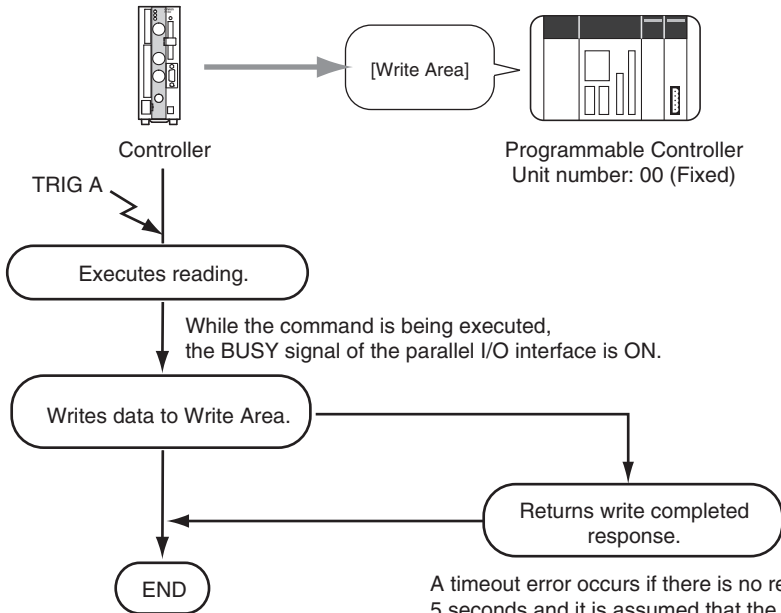

Set the **Read Area** to **None**.

Controller

[Write Area]

Programmable Controller
Unit number: 00 (Fixed)

TRIG A

Executes reading.

While the command is being executed,
the BUSY signal of the parallel I/O interface is ON.

Writes data to Write Area.

Returns write completed
response.

END

A timeout error occurs if there is no response within
5 seconds and it is assumed that the line is broken or
the programmable controller is not working correctly.
An error message is displayed on the screen and the
ERR signal of the parallel I/O interface is turned ON.

NOTICE Time the input of TRIG A considering the image processing time and data output time, allowing sufficient leeway. An error will occur if the next input occurs before communications have been completed.

■ Using TXD Instructions

This is a method in which commands are not set in the Read Area but are actively sent from the programmable controller to the controller.

Set the **Read Area** to **None**.

Controller

Programmable Controller
Unit number: 00 (Fixed)

Issue the TXD command.

Set "3 bytes" for the number bytes of send data.

Executes command.

While the command is being executed, the BUSY signal of the parallel I/O interface is ON.

Writes data to the Write Area.

Returns write completed response.

END

A timeout error occurs if there is no response within 5 seconds and it is assumed that the line is broken or the programmable controller is not working correctly. An error message is displayed on the screen and the ERR signal of the parallel I/O interface is turned ON.

Setting Communications Specifications

■ Setting the Communication Speed and Communication Mode

The methods for setting the communication speed and data length are explained here. The same communication settings must be used on both the V530-R160 and the host device.

1. Move the cursor to **MON** or **RUN** and press the **ENT** Key.

2. Select **SYS**.

```
0.Scn 0 ▼ MON ▼      ----   ---ms
            SET
            MON        Freeze( 0)
            RUN
            SYS
            TOOL
            SAVE
```

▼

The System settings screen will be displayed.

3. Select **Communication**.

```
System settings

Camera/Monitor
Communication
Image storing
Startup mode
Error method
Date/Time
Version

Select communication methods.
```

▼

The selections will be displayed.

4. Select **RS-232C/422**.

```
Communication

RS-232C/422
Normal
Host link
Parallel
Multi Drop
Output settings

Select communication methods of
the RS-232C.
```

▼

The screen for setting the communications specifications will be displayed.

5. Make the settings for each item.

6. Select **End**.

```
Communications(RS-232C/422)

 Interface   :  RS-232C▼
 Baud rate   : 38400bps▼
 Data length :    8bit▼
 Parity bits :    None▼
 Stop bits   :    1bit▼
 Header      :    None▼
 Footer      :      CR▼
 FCS         :     OFF▼
 ↑↓
             End
```

▼

The setting will be registered and the screen in **4.** will return.

Set Items and their details

Item	Selection	
Interface	RS-232C*, RS-422	
Baud rate (See note 1.)	2400, 4800, 9600, 19200, 38400*, 57600,115200 (bps)	The same settings as those of the Programmable Controller
Data length	7, 8* (bit)	
Parity bits	None*, Odd, Even	
Stop bits	1*, 2 (bit)	
Header	None*, STX, ESC	
Footer	CR*, LF, CR+LF, ETX	
FCS	OFF*, ON	
Mode	Select **Host Link**. (Normal*, Host link)	
Protocol (See note 2.)	XMODEM*, ZMODEM	

The asterisk (*) indicates the default setting.
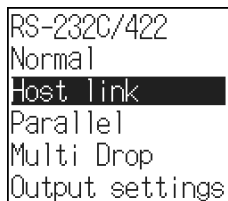

Note 1: Since communications speeds higher than 20 kbps are not defined with the RS-232C standard, depending on the cable length, if **38400** bps or a higher setting is selected it may not be possible to perform communications properly.
If this happens, change the setting to **19200** bps or lower.

Note 2: The XMODEM (-1K) protocol is not supported.

■ Settings Relating to Programmable Controllers

Set the Read Area where the controller checks the command, and the Write Area where the reading result is output.
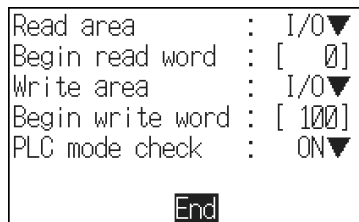

1. Select **Host link** on the communications specifications setting screen.

```
RS-232C/422
Normal
Host link
Parallel
Multi Drop
Output settings
```

▼

The Host link setting screen will be displayed.

2. Make the settings for each item.

3. Select **End**.

```
Read area      :  I/O▼
Begin read word  : [   0]
Write area     :  I/O▼
Begin write word : [ 100]
PLC mode check :   ON▼

            End
```

▼

The setting will be registered and the screen in **1.** will return.

Set Items and their details

Item	Selection	
Read area	Select the relay where the controller checks commands. I/O*, HR (holding relay), LR (link relay), DM (data memory), None (No reading. TXD instruction will be accepted.)	
Begin read word	Set the first word to read in area specified above. (0 to 9995; default setting: 0)	
Write area	Select the relay where the controller outputs execution results. I/O*, HR (holding relay), LR (link relay), DM (data memory), None (No writing)	
Begin write word	Set the first word to write in the area specified. (0 to 9996; default setting: 100)	
PLC mode check	ON*	On entering the **MON** mode or **RUN** mode, the mode of the programmable controller is checked. Reading does not start unless the programmable controller is in **MON** mode. (Error messages are displayed.)
	OFF	When the V530-R160 is in **MON** or **RUN** mode, it sends a mode change command to the Programmable Controller to forcibly switch the Programmable Controller to **MON** mode.

The asterisk (*) indicates the default setting.

I/O Format

■ Input Format

The following commands can be input from the host to the controller.
Set the command to be executed in the Read Area.

▪ Command list

Command code	Function	Page
0010	Performs one reading.	p.241
0011	Starts continuous reading.	p.241
0012	Stops continuous reading.	p.241
0020	Switches to the specified scene number.	p.242
0021	Increases the scene number for the scene to be displayed by one.	p.242
0022	Decreases the scene number for the scene to be displayed by one.	p.242
0023	Obtains the scene number of the currently displayed scene.	p.242

▪ Format

The format is explained here in command code order. The commands are input in BCD code. Set the command in the reading word of the Read Area.

0010: One shot reading

Function • • • Performs one reading.

Reading ends when the reading is correctly performed (OK).

When the reading is not correctly performed (NG), reading continues to be performed for the number of retries specified in the setting conditions.

The reading result is output to the Write Area.

Refer to page 243.

Reading start word	Data				Description
+0	0	0	1	0	Command code

0011: Continuous reading

Function • • • Performs continuous reading.

The reading result is output to the Write Area.

Refer to page 243.

Reading start word	Data				Description
+0	0	0	1	1	Command code

0012: Continuous reading stop

Function • • • Stops continuous reading.

Reading start word	Data				Description
+0	0	0	1	2	Command code

0020: Displayed scene selection

Function • • • Switches the scene in response to a designated scene number.

Reading start word	Data				Description
+0	0	0	2	0	Command code
+1	0	0	0	Scene number	Scene number (0 to 9)

0021: Displayed scene number +1

Function • • • Increases the scene number for the screen to be displayed by one.
When the current scene number is 9, the scene number will switch to 0.

Reading start word	Data				Description
+0	0	0	2	1	Command code

0022: Displayed scene number -1

Function • • • Decreases the scene number for the scene to be displayed by one.
When the current scene number is 0, the scene number will switch to 9.

Reading start word	Data				Description
+0	0	0	2	2	Command code

0023: Obtain displayed scene number

Function • • • Obtains the scene number of the currently displayed scene.

Reading start word	Data				Description
+0	0	0	2	3	Command code

Writing start word	Data				Description
+0	Write flag	0	0	0	Write flag
+1	0	0	0	Scene number	Scene number (0 to 9)

Write flag switches between [0] ← → [F] each time data is output.
Monitor the flag to confirm whether reading judgement has been written.

CHECK!

■ Output Format

On execution of reading, the reading data is saved in the Write Area of the programmable controller in ASCII code.

Write flag switches between [0] ←→ [F] each time data is output.
Monitoring changes in the status of this bit makes it possible to determine
whether data has been written. Since the bit status becomes "0" after the final
measurement, save "F" as the initial value.

Writing start word	Data			Description
+0	Write flag	0	0	0	Write flag
+1	Reading data		Reading data 2nd byte	Reading data
+2	Reading data 3rd byte		Reading data 4th byte	
.	.		.	
.	.		.	
.	.		.	
+27	Reading data 53rd byte		Reading data 54th byte	
+28	Reading data 55th byte		Reading data 56th byte	

• In the host link mode, there are restrictions on the volume of communications data that can be sent at one time.

The maximum volume of data is as follows. The reading data after the 56th letter are ignored.

• Letters of the alphabet: 56 letters

• When reading is NG, error codes are output to word +1.

• If the reading data consists of an odd number of bytes, a space (ASCII code 20) is inserted.

For error code details, refer to *Error Messages and Corresponding Corrective Actions* in *Section 9, Troubleshooting*.

Refer to page 257.

Connection Examples for Programmable Controller (Host Link)

This is an example of connection when using a CS1H programmable controller made by OMRON.

■ System Configuration
RS-232C cable

XW2Z-200T (2 m)
XW2Z-500T (5 m)

Camera

Programmable Controller

CPU unit: CQM1H-CPU**
Power supply: CQM1-PA**
I/O unit: C200H-ID212

Power supply

Monitor

Controller

■ RS-232C Cable Wiring (XW2Z-200T/XW2Z-500T)

The maximum cable length is 15 m.

Controller			Programmable Controller	
Signal	Pin		Pin	Signal
SD	2		2	SD
RD	3		3	RD
NC	4		4	RS
RDB(RD+)	5		5	CS
GND	9		9	GND
Hood	—		Hood	—
Only use a shielded cable.

■ Settings at the Programmable Controller

Set the communications conditions of the host link unit of the programmable controller or the host link port built into the CPU unit.

For details on how to make the settings, refer to the manual for the programmable controller.

Item	Setting
Communication method	Host link
Unit number	00
Baud rate	9600 bps
Data length	7 bit
Parity bits	EVEN
Stop bits	2 bit

■ Settings at the Controller

Item		Setting
Communications specifications Refer to page 236.	Baud rate	The same settings as those of the Programmable Controller.
	Data length	
	Parity bits	
	Stop bits	
	Mode	Host link
Host link Refer to page 236.	Read area	DM
	Begin read word	0100
	Write area	DM
	Begin write word	0110

■ Program Examples

This program inputs a One Shot Reading Command to the Programmable Controller's DM. The V530-R160 references this command and reads the data. The reading data is written to the specified words in the Programmable Controller.

1. Set the reading conditions of the V530-R160 and set the reading mode to **RUN** mode.

2. Set the Start Reading Command in **DM0100** of the Programmable Controller.

▼

The V530-R160 reads codes, sets the Write Flags in DM0110, and writes the reading data to DM words beginning with DM 0111.

3. Check the write flag DM0110 at the Programmable Controller.
Check whether or not data has been written.

▼

If data has been written, the write flag changes from [0] ← → [F].

■ Ladder Program Example
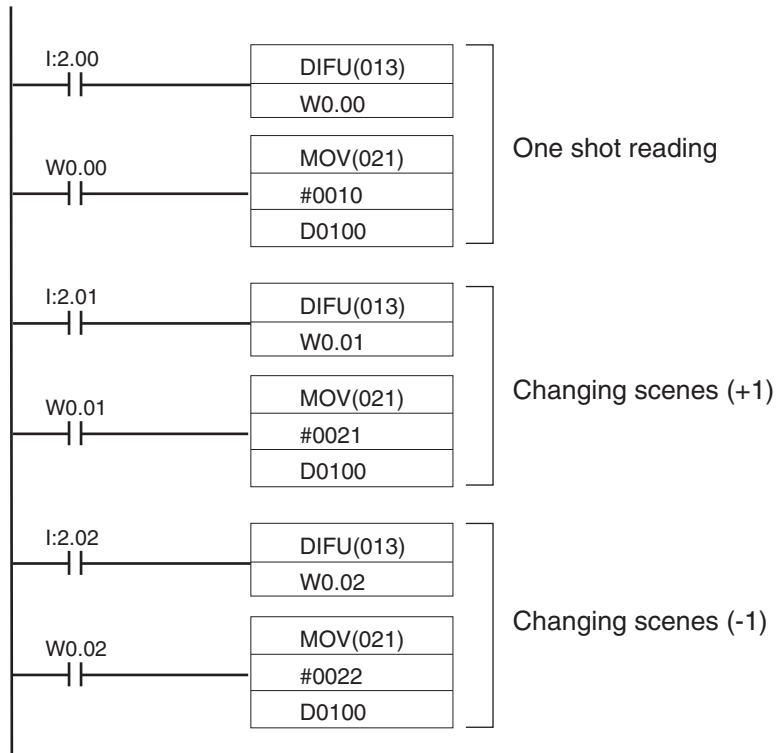

• Example of ladder program error

If a ladder like the one shown below has been set with the Read Area of the controller set to **I/O**, bit-unit output settings are not possible.

Settings at the controller

Item	Setting
Read area	I/O
Begin read word	0100
Write area	DM
Begin write word	0110
The read command "0010" will remain set in the Read Area and reading will be executed continuously.

MEMO

SECTION 9
Troubleshooting

This section explains the countermeasures to take when reading cannot be executed correctly, or when trouble occurs.

Improving Reading

Environment and Setup

Items	Details
Image	Adjust the lighting and the focus to produce a suitable image. The image can be checked in real time by switching to a through image. 📖 Refer to page 76 (Sec.4).
Lighting	Use appropriate lighting for the application and the read object. The reading accuracy can be improved significantly by changing the lighting. 📖 Refer to page 49 (Sec.2).
Field of vision	• If the code image is too large, and not all of it can be read, resulting in an NG reading (because of hollowing of dots), increase the field of vision. The effects of hollowing can be prevented. • If the cell recognition coordinates are incorrect, decrease the field of vision and thereby make the code image larger. Cell recognition accuracy can be improved. • Adjust the field of vision for the code to be at least 5 pixels per cell. Under normal conditions, it is recommended that settings are made so that the number of pixels per cell is between 7 and 12. Check the number of pixels on the pattern registration screen. 📖 Refer to pages 83 (Sec.4) and 132 (Sec.5). • Try changing the lens configuration and the field of vision.
Margins	A margin of at least a cell must be provided around the code.

 ## Conditions Settings

Confirm the following settings.
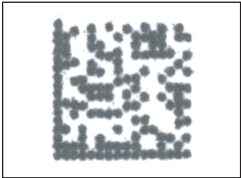

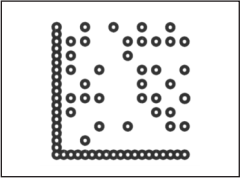

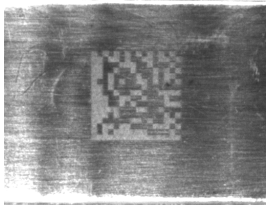

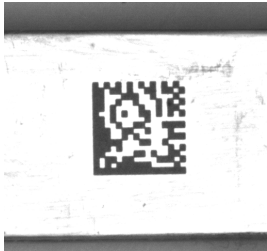

Items	Possible problem
Menus	[Check Items] Is the correct menu selected?
	[Countermeasure] Choose the menu item appropriate for the code to be read. Refer to page 76 (Sec.4).
Reading	[Check Items] • Has a finder pattern been detected? • Has cell recognition been performed properly? If ON is set for **Display settings/FP & Cell position** the finder pattern and cell recog- nition position can be checked on the monitor. Refer to page 114 (Sec.5).
	[Countermeasure] Reading accuracy can be improved by adjusting the following items: • Field of vision • Lighting • Activation of Smoothing in Filtering • Activation of BGS levels
Settings	[Check Items] Check that the following items match the code being read: • Symbol color • R&L reverse • Matrix size (for DataMatrix mode) • Version (for QRCode mode)
	[Countermeasure] Match the settings on the left to the reading code.
Other	[Check Items] Check error codes.
	[Countermeasure] Take countermeasures according to the error codes listed on page 253. Refer to page 253.

 To read at high speed, set a small search area and angle range. Note that correct reading may not be possible in some cases, so you must verify by actually performing reading after the change.

Improving Reading **SECTION 9**

Countermeasure Examples

The following are only a selection of examples of possible countermeasures. Reading operation will not necessarily be improved by performing the following operations and so execute a reading to confirm correct operation.

Items	Possible problem
Dot code Hollowing of dots	• The influence of hollowing can be decreased by increasing the field of vision and thereby decreasing the size of the code image. • The influence of dots can be reduced by activating the **Dilate** or **Erosion** function of **0. Image Adjust/Filtering**. • The influence of dots can be further reduced using the smoothing function (**0. Image Adjust/Filtering retry**). The influence of hollowing can be decreased by adjusting the BGS levels (**0. Image Adjust/BGS levels**). Refer to page 94 (Sec.5). Before countermeasure / After countermeasure Before countermeasure / After countermeasure
Lighting	Improve reading accuracy by using the optimum lighting for the reading object. Example: Try the following countermeasure when performing reading for a code created by direct marking with a laser on stainless steel. Before countermeasure (Oblique Lighting) / After countermeasure (Coaxial Lighting)

Error Codes and Countermeasures

The error codes that are generated in the event of a reading NG, and their countermeasures, are listed here in error code order.

■ DataMatrix Reading

Error code	Description	Countermeasures	📖
E100	No Finder Pattern	No finder patterns were detected. • Check if any pattern is registered. A finder pattern may not be registered.	p.81
E110	Finder Pattern Over	Multiple candidate points have been detected for the finder pattern. • Increase the correlation value. • Check the printing of the reading code. • The position of finder patterns can be confirmed on the monitor when **Display settings/FP & Cell position** is turned ON. • Register the pattern again. The registered pattern may not be the optimum one.	p.108 p.114
E120	Decode Error (Timing pattern detection error)	Codes were restored to correct errors, but not decoded correctly. The timing patterns in the X or Y directions may be stained or damaged. • Check the condition of the timing pattern. • Check the matrix size setting. The size may not be set correctly. • Register the pattern again. The registered pattern may not be the optimum one.	p.254 p.110
E121	Decode Error (Timing pattern detection error in X direction)	No timing pattern in the X direction could be detected, and correct decoding was not possible. The timing pattern in the X direction may be stained or damaged. • Check the condition of the timing pattern.	p.254
E122	Decode Error (Timing pattern detection error in Y direction)	No timing pattern in the Y direction could be detected, and correct decoding was not possible. The timing pattern in the Y direction may be stained or damaged. • Check the condition of the timing pattern.	p.254
E123	Decode Error (Cell recognition error)	Codes were restored to correct errors, but not decoded correctly. Data of DataMatrix may be stained or damaged. • Check the condition of the data part of the code. • Register the pattern again. The registered pattern may not be the optimum one. • Increase the size of the code image. The cell recognition coordinates may be incorrect.	p.254

Error Codes and Countermeasures

SECTION 9

Error code	Description	Countermeasures	
E150	Decode Error (No definition error)	The printing is in a special format and not defined for the V530-R160. • Change the printing format.	–
E200	Timeout Error	Decoding was not performed within the time-out time. • Make the reading angle in **Pattern settings/Code settings** smaller. • Lengthen the **Reading settings/Timeout**. • Change the angle of vision, e.g. by increasing the size of the code image.	p.108 p.112

▪ DataMatrix explanatory diagram
1. A margin of 1 or more cells around the code is required.
2. Timing patterns (The cross point between black and white.)
3. The L-shape in the corner is a finder pattern.
4. An area other than 1 to 3 contains the data.

■ QRCode Reading

Error code	Description	Countermeasures	📖
E000	No Finder Pattern	No finder patterns were detected. • Check if a pattern is registered. A finder pattern may not be registered.	p.130
E004	Missing Finder Pattern	One or more points of a finder pattern have been detected, but there are insufficient points for detection. Or, three points have been detected but their relative positioning is incorrect. Some of the finder patterns may be stained or damaged. • Check the printing of the reading code. • The position of finder patterns can be confirmed on the monitor when **Display settings/FP & Cell position** is turned ON. • Register the pattern again. The registered pattern may not be the optimum one.	p.114
E005	Finder Pattern Over	Multiple finder patterns have been detected. • Increase the correlation value. • Check the printing of the reading code. • The position of finder patterns can be confirmed on the monitor when **Display settings/FP & Cell position** is turned ON. • Register the pattern again. The registered pattern may not be the optimum one.	p.137 p.114
E011	Decode Error (Format information error)	No "format information" could be detected in the QRCode. Format information in QRCode may be stained or damaged. • Check the "format information" part of the code.	p.256
E012	Decode Error (Version information error)	No "version information" could be detected in the QRCode. Version information in QRCode may be stained or damaged. • Check the "version information" part of the code.	p.256

Error code	Description	Countermeasures	
E013	Decode Error (Cell recognition error)	Codes were restored to correct errors, but not decoded correctly. Data of QRCode may be stained or damaged. • Check the condition of the data part of the code. • Register the pattern again. The registered pattern may not be the optimum one. • Increase the size of the code image. The cell recognition coordinates may be incorrect.	p.256
E020	Decode Error (No definition error)	The printing is in a special format and not defined for the V530-R160. (e.g. link mode) • Change the printing format.	–
E200	Timeout Error	Decoding was not performed within the time-out time. • Make the reading angle in **Pattern settings**/**Code settings** smaller. • Lengthen the **Reading settings**/**Timeout**. • Change the angle of vision, e.g. by increasing the size of the code image.	p.137 p.112

▪ QRCode explanatory diagram
1. A margin of 1 or more cells around the code is required.
2. Format information of the code. (four ▬▬ locations)
3. Finder patterns (Symbols in three corners)
4. An area other than 1. to 3. contains the data.

Error Messages and Corresponding Corrective Actions

The error messages displayed on the screen and the corresponding corrective actions are presented.

ERR   When a message with this symbol appended is displayed, the ERR signal of the parallel I/O interface is ON.

Error message	Countermeasures	📖
The PLC is not in the Monitor mode.	Change the mode of the Programmable Controller to **MON** mode.	–
Intelligent Lighting is not selected.	Check the setting for **SYS**/**Camera**/**Monitor**. (Reason) It is possible that the setting for **SYS**/**Camera**/**Monitor**/**Intelli. Light. 0** or **Intelli. Light. 1** is **Not used**.	p.181
Camera connection is incorrect. ERR	• Are the Camera Cables connected to the V530-R160? • Is the Camera Cable disconnected from the Camera? • Check the setting for **SYS**/**Camera**/**Monitor**, then turn the power OFF and back ON.	p.181
Cannot access this file.	Check the following points and re-select the file. • Is the file read-only? • Is Japanese used in the file name? • Does the Memory Card have sufficient space to save the file?	–
Host link error. Changing for normal mode. ERR	Check the following points then restart the controller and carry out communications. Or change the setting for **Mode** in **SYS**/**Communication**/**RS-232C/422** to **Host link** (*) and then carry out communications. • Is the cable connected properly? • Are the communications specifications for the host device and the V530-R160 the same? • Is the Programmable Controller ON? * The communications **Mode** will automatically return to **Normal** mode when this error occurs.	p.236

Error message	Countermeasures	📖
Communications error ERR *	Turn OFF the power to the V530-R160, and check for the following items before restarting the V530-R160. • Is the cable connected properly? • Are the communications specifications for the host device and the V530-R160 the same? • Is the host device operating properly? (Reason) Data transfer has been interrupted due to a communications error in communications between the V530-R160 and a host device. If the same error message appears after restart, it may mean that the V530-R160 is faulty. Contact your OMRON representative.	p.192 p.206 p.236
Communications error ERR		
Communications error ERR		
Timeout error ERR		
Timeout error ERR		
Timeout error ERR		
Incorrect data format received. ERR	Select the correct transfer file and re-execute the data transfer. (Reason) The wrong file has been selected.	–
Data are too large. Cannot save by serial communication.	Save the data to a Memory Card or delete surplus data and then save. (Reason) Data 2MB or greater cannot be saved using serial communications.	–

* : The ERR signal only turns ON when an error occurs in the **MON** mode or **RUN** mode.

Error message	Countermeasures	📖
Cannot delete directory having files.	Delete the files in the directory to be deleted or move the files to another directory. (Reason) Only empty directories can be deleted.	p.171
Directory name is not specified.	Specify the directory name and press the **ENT** Key.	
Directory name contains unusable character.	Check the directory name. The following characters cannot be used: ¥ / , : ; * ? " < > | & .	–
Same directory name has already existed.	Specify a directory name that is not being used.	–
Same file name has already existed.	Specify a file name that is not being used.	–
Date/time settings error.	Set the correct data and time. (Reason) A date not in the calendar or an invalid time has been input.	p.188
File name is not specified.	Specify the file name and then press the **ENT** Key.	–
File name contains unusable character.	Check the directory name. The following characters cannot be used: ¥ / , : ; * ? " < > | & .	–
Memory card access error ERR*	• The recommended Memory Card has not been inserted. • Use another Memory Card. • The Memory Card has not been formatted.	p.51
Memory card is not inserted ERR*	Insert the recommended Memory Card.	p.51

* : The ERR signal only turns ON when an error occurs in the **MON** mode or the **RUN** mode.

Error Messages and Corresponding Corrective Actions

SECTION 9

Error message	Countermeasures	📖
Insufficient free space of memory card. ERR *	• Delete unnecessary files to create free space. • Replace the Memory Card with a bigger capacity card.	−
Insufficient flash memory. ERR	• Delete unnecessary scenes.	−
Insufficient model memory. ERR	• Reduce the size of the registered patterns. • Delete unnecessary patterns.	−
Insufficient work memory. ERR	• Delete unnecessary scenes.	−

Loaded file error.
 	
ERR *
	Specify the correct file and reload.
	  (Reason)
	  • A formatting error may have occurred during data or program file load.
	  • Data 2MB or greater cannot be loaded using serial communications. Load the data using the Memory Card.
		−

* : The ERR signal only turns ON when an error occurs in the **MON** mode or the **RUN** mode.

Troubleshooting

(?) Connection Errors

Symptoms	Causes and remedies	📖
The POWER indicator is not lit.	• The power supply is not connected properly. • The power supply voltage is below the allowed range (20.4 to 26.4 VDC).	p.45
The Video Monitor is blank.	• The power to the Video Monitor is not ON. • The monitor cable is not connected properly. • The Video Monitor is malfunctioning. • (When the LCD monitor is used) The power supply is not sufficient for the LCD monitor.	p.43
The Video Monitor image is not clear.	• There is electrical noise entering from the power supply or cables. • The Monitor Cable is not connected properly.	–
Cannot make key inputs on the Console.	• The Console Cable is not correctly connected.	p.43
Camera images are not displayed. (when using a Camera with a light)	• The camera cable is not properly connected. • The Light Cable is not properly connected.	p.43
Camera images are not displayed. (when using a standard CCTV lens and light.)	• The lens cap has not been removed. • The Camera Cable is not properly connected. • The lens diaphragm is opened or closed too far. • The shutter speed is not suitable. • The light method is not suitable.	p.43 p.93 p.49
The images on the monitor are recognized but codes are hard to read.	• Refer to the entry for the error code in *Error Codes and Countermeasures*. Change the setting conditions and adjust the camera and lighting.	p.253

❓ Errors During Menu Operation

Symptoms	Causes and remedies	📖
The reading data is not displayed on the monitor.	• The V530-R160 is not in **MON** or **RUN** mode.	p.87

❓ Parallel I/O

Symptoms	Causes and remedies	📖
Trigger signals (input signals) are not received.	• The cables are not correctly wired. • The signal line is disconnected. • The V530-R160 is not in **MON** or **RUN** mode.	p.56 p.176 −
Signals cannot be output to the host.	• The trigger signal has not been input. • The signal line is disconnected. • The cables are not correctly wired. • The V530-R160 is not in **RUN** mode.	p.87 p.176 p.56 −

❓ Serial interface

Symptoms	Causes and remedies	📖
No communications are possible.	• The cables are not correctly wired. • The communications specifications of the V530-R160 do not match those of the host device. • The communications mode was not selected under **SYS**/**Communication**/**RS-232C/422**. Select either **Normal** or **Host link** for **Mode** under **RS-232C/422** depending on the purpose. • The V530-R160 is not in **MON** or **RUN** mode.	p.60 p.206 p.236 −
The Unit operates well initially, but after a while there is no response from the V530-R160.	• The reception buffer on the external device (e.g. computer) is full. Check that settings allow the data to be properly received.	−

SECTION 10
Appendix

Maintenance

Maintaining and Changing a Camera with a Light

• The Light will gradually become dimmer as it is used (approx. 20% dimmer after 1,500 hours of operation).

Replace the Light after approx. 1,500 hours of use.

• Replace the Light if it is partially damaged or not fully functioning.

■ F150-SLC20 Maintenance

	Field of vision	Model
Light	20 mm	F150-LTC20

▪ Removing the Light

Camera base

Hold this section
when removing the Cable
Light

1. Disconnect the light cable from the light connector on the back of the Camera.

2. Remove the light cable from the slot in the camera base.

3. Remove the two screws that secure the Light.

4. Remove the bottom two screws that secure the Light.

5. Remove the Light from the Camera.

6. Reverse the procedure 1 through 5 to install the Light.

> NOTICE Do not disassemble the Lens. Disassembly can damage the Lens.

> CHECK! When using the Camera alone without connecting an Intelligent Lighting (F150-S1A-2D):
> The bottom two screws shown in **4.** will be too long and won't fit the Camera. Use two M2 × 3 screws for the bottom screws instead.
> The top screws shown in **3.** are not needed.

■ Installing the Light
Camera base

Light

1. Fit the light in the Camera.

2. Replace the bottom two screws that secure the Light.

3. Replace the two screws that secure the Light.

4. Insert the light cable in the slot in the camera base.

5. Connect the light cable to the light connector on the back of the Camera.

Maintenance SECTION 10

Replacing the Battery

The V530-R160 contains a battery that backs up the time and date information. When the battery is nearly discharged, the message "BATTERY LOW" will be displayed at startup. Replace the battery with an OMRON 3Z49-BAT1 Battery.

Dispose of the spent battery properly.

Manufacturer	Model
OMRON	3Z49-BAT1

CHECK!
- Always turn OFF the power supply before replacing the battery.
- The V530-R160's clock will be reset if the new battery is not connected within 2 minutes of removing the spent battery. If the clock is inadvertently reset, the time and date will have to be set again.
  Refer to page 188.

1. Open the battery cover on the side of the V530-R160.

The cover can be opened with a small flat-blade screwdriver.

▼
The battery is mounted to the inside of the battery cover.

2. Hold the battery connector by its base and pull it off.

3. Cut the binding band that secures the battery and remove the battery from the cover.

2.

3.
binding band

▼
4. Reverse the procedure 1 through 3 to install the new battery.

Use the new binding band included with the new battery to attach it to the battery cover.

⚠ **WARNING**

Battery Precautions

•Do not short circuit, attempt to charge, disassemble, apply pressure that would deform to, or incinerate the lithium battery. The lithium battery may start a fire, explode, or burn if not treated properly.

Regular Inspections

To maintain the V530-R160 in the best condition, perform the following regularly.

- Clean the Lens and LED indicators with a lens-cleaning wipe or blow off dust with an aerosol air sprayer.
- Lightly wipe off dirt with a soft cloth.

Inspection point	Details	Tools required
Power supply	The voltage measured at the power supply terminals on the terminal block must be 20.4 VDC to 26.4 VDC.	Circuit tester
Ambient temperature	The operating ambient temperature inside the cabinet must be between 0 to 50°C.	Thermometer
Ambient humidity	The operating ambient humidity inside the cabinet must be between 35 and 85%.	Hygrometer
Installation	Each cable connector must be correctly inserted and locked. The cameras must be firmly secured. The camera lens mounts must be firmly secured.	Screwdriver
LED lights	All indicators must light when the power is turned ON. • Verify that a through-image is displayed. • When using an Intelligent Lighting, verify that the light level settings are set to their maximum values.	–

NOTICE
- Turn OFF the power and take safety precautions before conducting inspections.
- Do not use thinners or benzene.

Maintenance SECTION 10

Specifications and Dimensions

Controller

V530-R160

(Unit: mm)

	Supply voltage	20.4 to 26.4 VDC
General Specifications	Current consumption	1.6 A max.
	Insulation resistance	20 MΩ min. between all DC external terminals and GR terminal (with internal surge absorber removed)
	Dielectric strength	1,000 VAC, 50/60 Hz between all DC external terminals and GR terminal (with internal surge absorber removed)
	Leakage current	10 mA max.
	Noise resistance	2000 V; rise time: 5 ns; pulse width: 50 ns Burst continuation time: 15 ms; Period: 300 ms
	Vibration resistance	10 Hz to 150 Hz; half-amplitude: 0.35 mm (maximum acceleration 50 m/s^2) 10 times for 8 minutes each in 3 directions (except for bottom surface-mounting)
	Shock resistance	150 m/s^2 3 times each in 6 directions
	Ambient temperature	Operating: 0 to +50°C Storage: -25 to +65°C (with no icing or condensation)
	Ambient humidity	Operating/storage: 35% to 85% (with no condensation)
	Ambient environment	No corrosive gasses
	Ground	Ground the V530-R160's ground terminal to less than 100 Ω.
	Degree of protection	IEC60529 IP20
	Case material	ABS/PC
	Weight	Approx. 570 g (Controller only)

```

Data Capacity Tables

The maximum quantity of information that can be stored varies depending on the matrix size of the code. In regard to the information carried by the code, the maximum data capacity varies depending on the character type and the arrangement and combination of the characters. The relation between matrix size (number of cells) and data capacity is shown in the table below.

■ DataMatrix

• DataMatrix (ECC200)

In the diagram below, the matrix size is 12 × 12.

12 cells

12 cells
Matrix size	Data Capacity				
	Numerals	Alphanu-meric charac-ters	Alphanumer-ics and sym-bols	KANJI (2-byte)	KANA (1-byte)
10 × 10	6	3	3	–	1
12 × 12	10	6	5	1	3
14 × 14	16	10	9	3	6
16 × 16	24	16	14	5	10
18 × 18	36	25	22	8	16
20 × 20	44	31	28	10	20
22 × 22	60	43	38	14	28
24 × 24	72	52	46	17	34
26 × 26	88	64	57	21	42
32 × 32	124	91	81	30	60
36 × 36	172	127	113	42	84
40 × 40	228	169	150	56	112
44 × 44	288	214	190	72	142
48 × 48	348	259	230	86	172
52 × 52	408	304	270	101	202
64 × 64	560	418	372	139	278
8 × 18	10	6	5	1	3
8 × 32	20	13	12	4	8
12 × 26	32	22	20	7	14
12 × 36	44	31	28	10	20
16 × 36	64	46	41	15	30
16 × 48	98	72	64	23	47

What is Maximum Data Capacity? Refer to page 284.

What is Maximum Data Capacity?

Data Capacity Tables **SECTION 10**

Glossary

This glossary focuses on terms related to QRCodes and DataMatrix codes which are matrix-type 2-dimensional codes. There may be some parts of this glossary that do not apply to other types of 2-dimensional codes.

Glossary	Explanation
DataMatrix	DataMatrix codes were developed by I.D. Matrix, and are used extensively in the semiconductor and electronics industries. DataMatrix codes have a relatively large data capacity for their size. There are several different types of DataMatrix, differentiated by their error correction method. The ECC200 is the most commonly used type.
QRCode	The "Quick Response Code" type is a 2-dimensional code that was developed in Japan. High-speed reading is possible with QRCodes, but the code size is quite large compared to other 2-dimensional codes.
Error correction	This term is used to describe the function which detects and corrects errors using a special mathematical technique (commonly known as the "Read-Solomon" method). Using this function, reading is possible, to a certain extent, for codes with poor printing quality or that are damaged. There are, however, limits on the extent to which correction is possible, and reading may not be possible for codes if the damage is extensive. There are 2-dimensional codes for which the error correction level can be selected. (For example: With QRCodes, error correction levels of 7%, 15%, 25%, or 30% are available.)
Pixel	Pixels are the points that make up images. The monitor screen is 512 pixels high and 484 pixels wide which means that the screen contains approximately 250,000 pixels.

Glossary	Explanation
Maximum data capacity	The maximum amount of data that can be stored in a code varies with the code size. In other words, if there is a large amount of data to be stored, then the code size must also be large. The maximum data capacity will also vary with the type of characters used. With QRCodes and DataMatrix codes, the numeric capacity (numbers only) is larger than the alpha numeric capacity (numbers and letters). The capacity also varies in accordance with the character type and the arrangement and combination of the characters.
Right and left reversal	This is the term used to describe reading 2-dimensional codes marked on a transparent material from the reverse side. To give an example, if a 2-dimensional code that is marked on glass is read from the rear surface, it will be reversed in the left/right direction. Back (reading surface) Front Front Back
Black and white reversal	Usually, in images of 2-dimensional codes, the code itself is black and the background is white. Sometimes, however, due to the material of the reading object and the kind of lighting used, the code will appear white in the image obtained. This phenomenon is called "black and white reversal." Code: Black Code: White Background: White Background: Black
Cell	These squares are the units that make up matrix-type 2-dimensional codes. Whether these cells are black or white determines the information carried by the code.
Timing pattern	These patterns are used to determine symbol density and horizontal and vertical dimensions and thereby obtain a frame of reference for 2-dimensional codes. The timing patterns are straight lines composed of alternating black and white cells. QRcode Timing pattern DataMatrix
Version (QRCode)	The code size of QRCodes is indicated by the version. Version 1 indicates that a QRCode contains the minimum 21 cells both horizontally and vertically. The larger the version number, the larger the number of cells per side.

Glossary	Explanation
Pattern search	This is a method for locating finder patterns. Images of finder patterns are registered as models in advance and searches are made for similar parts of input images. The degree of similarity is expressed as a correlation value (0 to 100). The more similar the pattern, the higher the correlation value. The place with the highest correlation value out of places with a correlation value over a set threshold value is deemed to be the finder pattern. If it is not possible to detect a finder pattern, decrease this threshold value. If too many finder patterns are detected, increase this threshold value.
Finder pattern (Starting symbols)	These are patterns used to detect the position of 2-dimensional codes. The shape of the finder patterns varies with the type of code. Finder pattern QRcode DataMatrix
Resolution	The resolution is a measure of the detail with which images are displayed. The V530-R160 can display images (via a monitor) using approximately 250,000 pixels (512×484). This means that if the field of vision is 512 mm $\times$ 484 mm, the resolution will be 1 (mm/pixel).

Marking methods	There are several marking methods that can be used. The most suitable method will depend on factors such as the material of the object onto which the code is marked.
	The most commonly used marking devices are listed below.
	• Engraving machine
	  A pneumatic pen is controlled with compressed air to mark a metal surface by engraving.
	• Printer
	  A printer can be used to print codes onto paper and different kinds of labels.
	• Laser Marker
	  A laser marker can be used to mark metal objects. A laser marker can mark very finely enabling the size of 2-dimensional codes can be reduced.
	• Exposure Marking
	  Using exposure marking, particles are not created (unlike laser marking) and even finder marking is possible than with laser marking. Exposure marking is used with semiconductor wafers, LCD panels, and color filters that have exposure processing.

Margin	This is the empty space around 2-dimensional codes. The OMRON V530-R160 can read codes with a 1-cell margin. The black area is the margin.

Revision code

The following table outlines the changes made to the manual during each revision. Page numbers refer to the previous version.

Revision code	Date	Revised content
1	October 2002	Original production
02	April 2004	**Inner front cover:** Information removed at top of page and trademark credit added at bottom of page. **Page 1:** Section of precautions added after this page (moved from pages 11 to 22 and revised). **Page 15:** Contents of notice changed. **Page 45:** End of first paragraph changed. First sentence in second paragraph changed. "Camera distance" changed to "working distance." **Page 222:** One diagram corrected and one added.
02A	November 2004	**Pages 2 to 4:** Warranty and liability information changed. **Page 6:** Precaution added.
03	May 2006	**Pages 11 and 272:** Description on Video Monitor deleted. **Pages 36 and 45:** Power Supply model number changed. **Page 36:** Monitor cable connector changed. **Page 36:** Graphic of Video Monitor deleted and note added at bottom graphic. **Pages 43, 68, 241, and 269: Monitor cable connector changed.** **Page 228:** Descriptions of commands in ladder program changed.
03A	May 2007	**Page 212:** Title changed from I/O Format to Command List. Description of input format deleted. **Page 213:** I/O format information updated. **Page 214:** Command format header added. **Page 223:** @GL and @RD information added for 1:N (Multi Drop) Connection. **Pages 229 and 230:** "CHECK!" items added. **Page 240:** Reference note for error code details added. **Page 249:** Description of Error Codes and Countermeasures changed.
03B	October 2010	Minor corrections
03C	March 2012	**Page 6:** Additions for Notice for Korea Radio Law
04	August 2015	Additions corresponding to change of EN standard.
