

The Communication Unit E3X-DRT21-S, E3X-CRT, E3X-ECT and E3NW cannot be connected. This product is not equipped with the Auto Power Control (APC) function.

When being installed with amplifier tightly, connecting up to 16 wire-saving connector is allowed. The following notice applies only to products that carry the CE mark.

NOTICE : In a residential environment, this product may cause radio interfernce, in which case the user may be required to take adequate measures.

Checking the Package Content

Amplifier Unit: 1
 Instruction Sheet, Compliance sheet

1-2 Input / Output Circuit Diagram

1-3 Mounting the Amplifier Unit

• Mounting on DIN Track

- 1. Let the hook on the Amplifier Unit's Fiber Unit connection side catch the track.
- 2. Push the unit until the hook clicks into place.
- DIN track (PFP-DN) is sold separately.
- If there is vibration or when connecting Please use an end plate (PFP-M)

• Removing from DIN Track

Push the unit in the direction 1.
 Lift the unit in the direction of arrow 2 while performing step 1

1-4 Mounting Fiber Unit

• Use Fiber Cutter

- 1. Insert a Fiber Unit (which can be freely cut) into a fiber
- cutter hole as necessary. (Do not use a hole which has been used once.)
- 2. Press down the blade at a single stroke to cut the Fiber Unit.
- Mount Fiber Unit
- . Open the cover. 2. Raise the lock lever. (Release)
- 3. Insert the Fiber Unit in the fiber unit hole until the Fiber
- Unit stops at the bottom.
- 4. Return the lock lever to the original position and fix the Fiber Unit. (Lock)
- · To mount the thin-diameter Fiber Unit, an attachment
- (E39-F9) is required. (The attachment is included with the applicable Fiber Unit.)

In the case of a coaxial reflective Fiber Unit, insert the single-core Fiber Unit O with a white line into the upper hole (Emitter side) and the multi-core Fiber Unit (B) into the lower hole (Receiver side)

If the va value in which an outp Setting a Threshold with I • Percentage Tuning CH1/2 individual 1. Turn ON Percentage Tuning in SET 2. Hold the button for 1 second or Incident light level setting: The Step 2 in tuning level. Incident light level setting: The Step 2 in tuning level.	ident level of the Step 1 and 2 values is e power tuning level. ween the Step 1 and 2 incident light levels.

CHECKI Set the Percentage tuning level to be below 0 in the case of a through-beam type (Dark ON: D-ON), or to be above 0 in the case of a reflective type (Light ON: L-ON)

Convenient Setting Features

3-1 Various Smart Tuning Methods

When Received Light Intensity Decreases due to Dust or Dirt

Maximum Sensitivity Tuning CH1/2 individual setting

Long-press the button for 3 seconds or longer in the presence of a workpiece in the case of through-beam type or without the presence of a workpiece in the case of reflective type, and then take your finger off the button when [FULL] is displayed on the green digital display part.

The green digital display changes [IPnŁ]→[FULL].

Incident light level setting: The incident level when the D button pressed is adjusted to "0". Threshold setting: The value is set to approx. 7% of the incident light level when the O button pressed. If the incident light level when the D button pressed is smaller during long distance detection, the minimum value by which an output is correctly turned ON will be set.

Making Adjustment with Passing Workpiece

• Full Auto Tuning CH1/2 individual setting

Hold the O button without the presence of a workpiece, and pass the workpiece through while $[P_{nL}] \rightarrow [F_{ULL}] \rightarrow [P_{ULD}]$ is displayed in green digital. (Keep holding the O button while the workpiece passes through, and hold 7 seconds or longer unitil [*fluEa*] is displayed in green digital. After the workpiece passes through, release your finger from the button.)

Incident light level setting: Adjust the max. incident light level while pressing the O button as the power tuning level. Threshold setting: Set to the middle between max. and min. incident light levels while pressing the obutton.

Determine Workpiece Position

Position Tuning [CH1/2 individual setting]

1. Press the O button without a workpiece in the area.

The green digital display changes [IPnL]. 2. Place the workpiece at the desired position and hold the O button for 3 seconds or longer.

The green digital display changes [2PnŁ]→[Po5].

Incident light level setting: The Step 2 incident level is adjusted to half the power tuning level. Threshold setting: Set to the same value as the Step 2 incident level.

3-2 Convenient Settings

Preventing Malfunction

cannot be performed.

When released, [Dr 5L oFF] is displayed. The threshold also changes accordingly.

For Stable Detection Regardless of Received Light Intensity Changed due to Dust or Dirt

If the threshold level must be changed according to the change in the received light intensity, the ATC Function (Active Threshold Control) can be used instead. (Make the ratio of the received light intensity to the threshold level constant.) The ATC function is enabled when the DPC function is set to ATC in the SET Mode and the Smart Tuning is executed in the Detection Mode. Other restrictions conform to those for the DPC function.

Maintenance

4-1 Troubleshooting

Troubleshooting

Problem	Cause	Remedy
Nothing is shown on the indication.	No power supplied or the cable broken	Check the wiring, connector connection, power supply voltage and power supply capacity again. *1
Nothing is shown on the digital indication.	Eco mode is ON.	Turn OFF Eco mode. *2
The segment of the fourth digit of the threshold value lights in sequence and "5669" is displayed when the button is pressed	Standby is selected for Eco Function and the external input signal is enabled.	Disable the external input signal and turn OFF Eco mode. *2
Sensing / Detection not possible despite the minimum threshold level	Detection distance for Fiber Head is insufficient, Fiber Head is not deeply inserted, or dust, dirt or Emission Level Adjustment Function has caused this trouble.	Install a Fiber Head, or check the insertion into the fiber amplifier again. Furthermore, try to set to GIGA Mode or Emission Level Adjustment Function. *2
The OUT indicator blinking	Affected by mutual interference or size or passing speed of workpiece.	When multiple Fiber Heads are installed, check the setting for mutual interference prevention. *2 Furthermore, try setting of GIGA Power Mode when the received light intensity is insufficient, or try settings such as OFF-delay Timer for prevention of output chattering. *2
Incident light level displayed in a negative value	The zero reset function is enabled.	Cancel the zero reset function. *3
Lost tracking of the settings made	-	Reset the settings. *4
The light intensity level display changes.	Affected by dust or dirt, temperature change, vibration, etc.	The receiving light intensity display is stabilized using the DPC function. *3
The Smart Tuning indicator does not light up	A tuning error has occur or a cause of the error has not been resolved. Alternatively, Power tuning ON / OFF setting is OFF.	Check the description of tuning error, take corrective action, and then perform Smart Tuning again. *5 Alternatively, reset the settings and then perform Smart Tuning again. *4
The incident light level at which the output turns ON and turns OFF is different.	To prevent output chattering, hysteresis is set automatically.	If this difference in detection is large, the margin of detection may be low, so review the detection conditions and perform Smart Tuning again. *5

Error Display

Error Name / Display	Cause	Remedy
Load Short Circuit Detection Error	Over current flowing to the control output.	Check wiring and connector connection again. *1
Lock ON	The key lock function enabled	Cancel the key lock function. *2
ATC Error	The incident light level has deteriorated due to dust or dirt. Or DPC/ATC does not work.	Wipe the dust off the Fiber Unit detection surface or other relevant areas and recover the original incident light level. Then, perform Smart Tuning. *3 Or check the settings again. *2
EEPROM Error E-RE * The asterisk * represents a number.	Failed internal data read / out	Turn ON the power again. If the error is not corrected, Hold the button for 3 seconds or longer \rightarrow Push the button twice \rightarrow Push the button once \rightarrow Push the button once, and reset settings. If the error remains, the error is caused by memory failure such as rewrite count exceeded. Please replace the amplifier unit.

Tuning Error

Error Name / Display	Cause	Remedy
Near Error	The light level difference between Points 1 and 2 is extremely small.	Change the detection function to the mode of slower response time. Narrow the distance between emitter and receiver. (Through-beam model) Move the Fiber Head closer to the sensing object. (Ordersting mode)
Low Error	Incident light level is too low.	(Reliection model)
	Incident light level is too high.	Widen the distance between emitter and receiver. (Through-beam model) Move the Fiber Head away from the sensing object. (Reflection model) Use a thin-diameter Fiber.
Percentage Tuning Error	Incident light level is too high or low.	Make the distance between emitter and receiver closer. (Through-beam model) Check the Light ON (L-ON) or Dark ON (D-ON) and the percentage tuning level of the output settings again.

5 Detailed Settings

apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.
